

**NOTICE OF PREPARATION OF A  
SUBSEQUENT ENVIRONMENTAL IMPACT REPORT  
FOR THE MUSEUM PLACE MIXED-USE PROJECT**

FILE NO: H16-024 and T16-024  
PROJECT APPLICANT: Insight Realty Company  
APN: 259-42-023

**Project Description:** Site Development Permit to allow the demolition of Parkside Hall to construct a 24-story, mixed-use high rise with up to 306 residential units, 187 hotel rooms, 209,779 square feet of office use, 14,116 square feet of retail space, and 60,000 square feet of additional museum space and a Tentative Map Permit to reconfigure 25 parcels into three lots for a mixed use building, all on a 2.33 gross acre site (File Nos. H16-024 and T16-024).

**Location:** 180 Park Avenue (APN 259-42-023).

As the Lead Agency, the City of San José will prepare a Subsequent Environmental Impact Report (EIR) for the project referenced above. The City welcomes your input regarding the scope and content of the environmental information that is relevant to your area of interest, or to your agency's statutory responsibilities in connection with the proposed project. If you are affiliated with a public agency, this EIR may be used by your agency when considering subsequent approvals related to the project. The project description, location, and probable environmental effects that will be analyzed in the EIR for the project are attached.

**Scoping Meeting:** An EIR Scoping meeting will be held on **Thursday, December 1, 2016** from 6:30 p.m. to 7:30 p.m. in Room 120 (Wing Rooms) at San Jose City Hall, 200 E. Santa Clara Street, San Jose, CA 95113.

According to State law, the deadline for your response is 30 days after receipt of this notice; however, we would appreciate an earlier response, if possible. Please identify a contact person, and send your response to:

City of San José  
Department of Planning, Building, and Code Enforcement  
Attn: David Keyon  
200 East Santa Clara Street, 3<sup>rd</sup> Floor Tower

**NOTICE OF PREPARATION OF  
A SUBSEQUENT ENVIRONMENTAL IMPACT REPORT  
FOR THE MUSEUM PLACE MIXED-USE PROJECT**

**November 2016**

***Introduction***

The purpose of an Environmental Impact Report (EIR) is to inform decision-makers and the general public of the environmental effects of the proposed project that an agency may implement or approve. The EIR process is intended to provide information sufficient to evaluate a project and its potential for significant impacts on the environment; to examine methods of reducing adverse impacts; and to consider alternatives to the project.

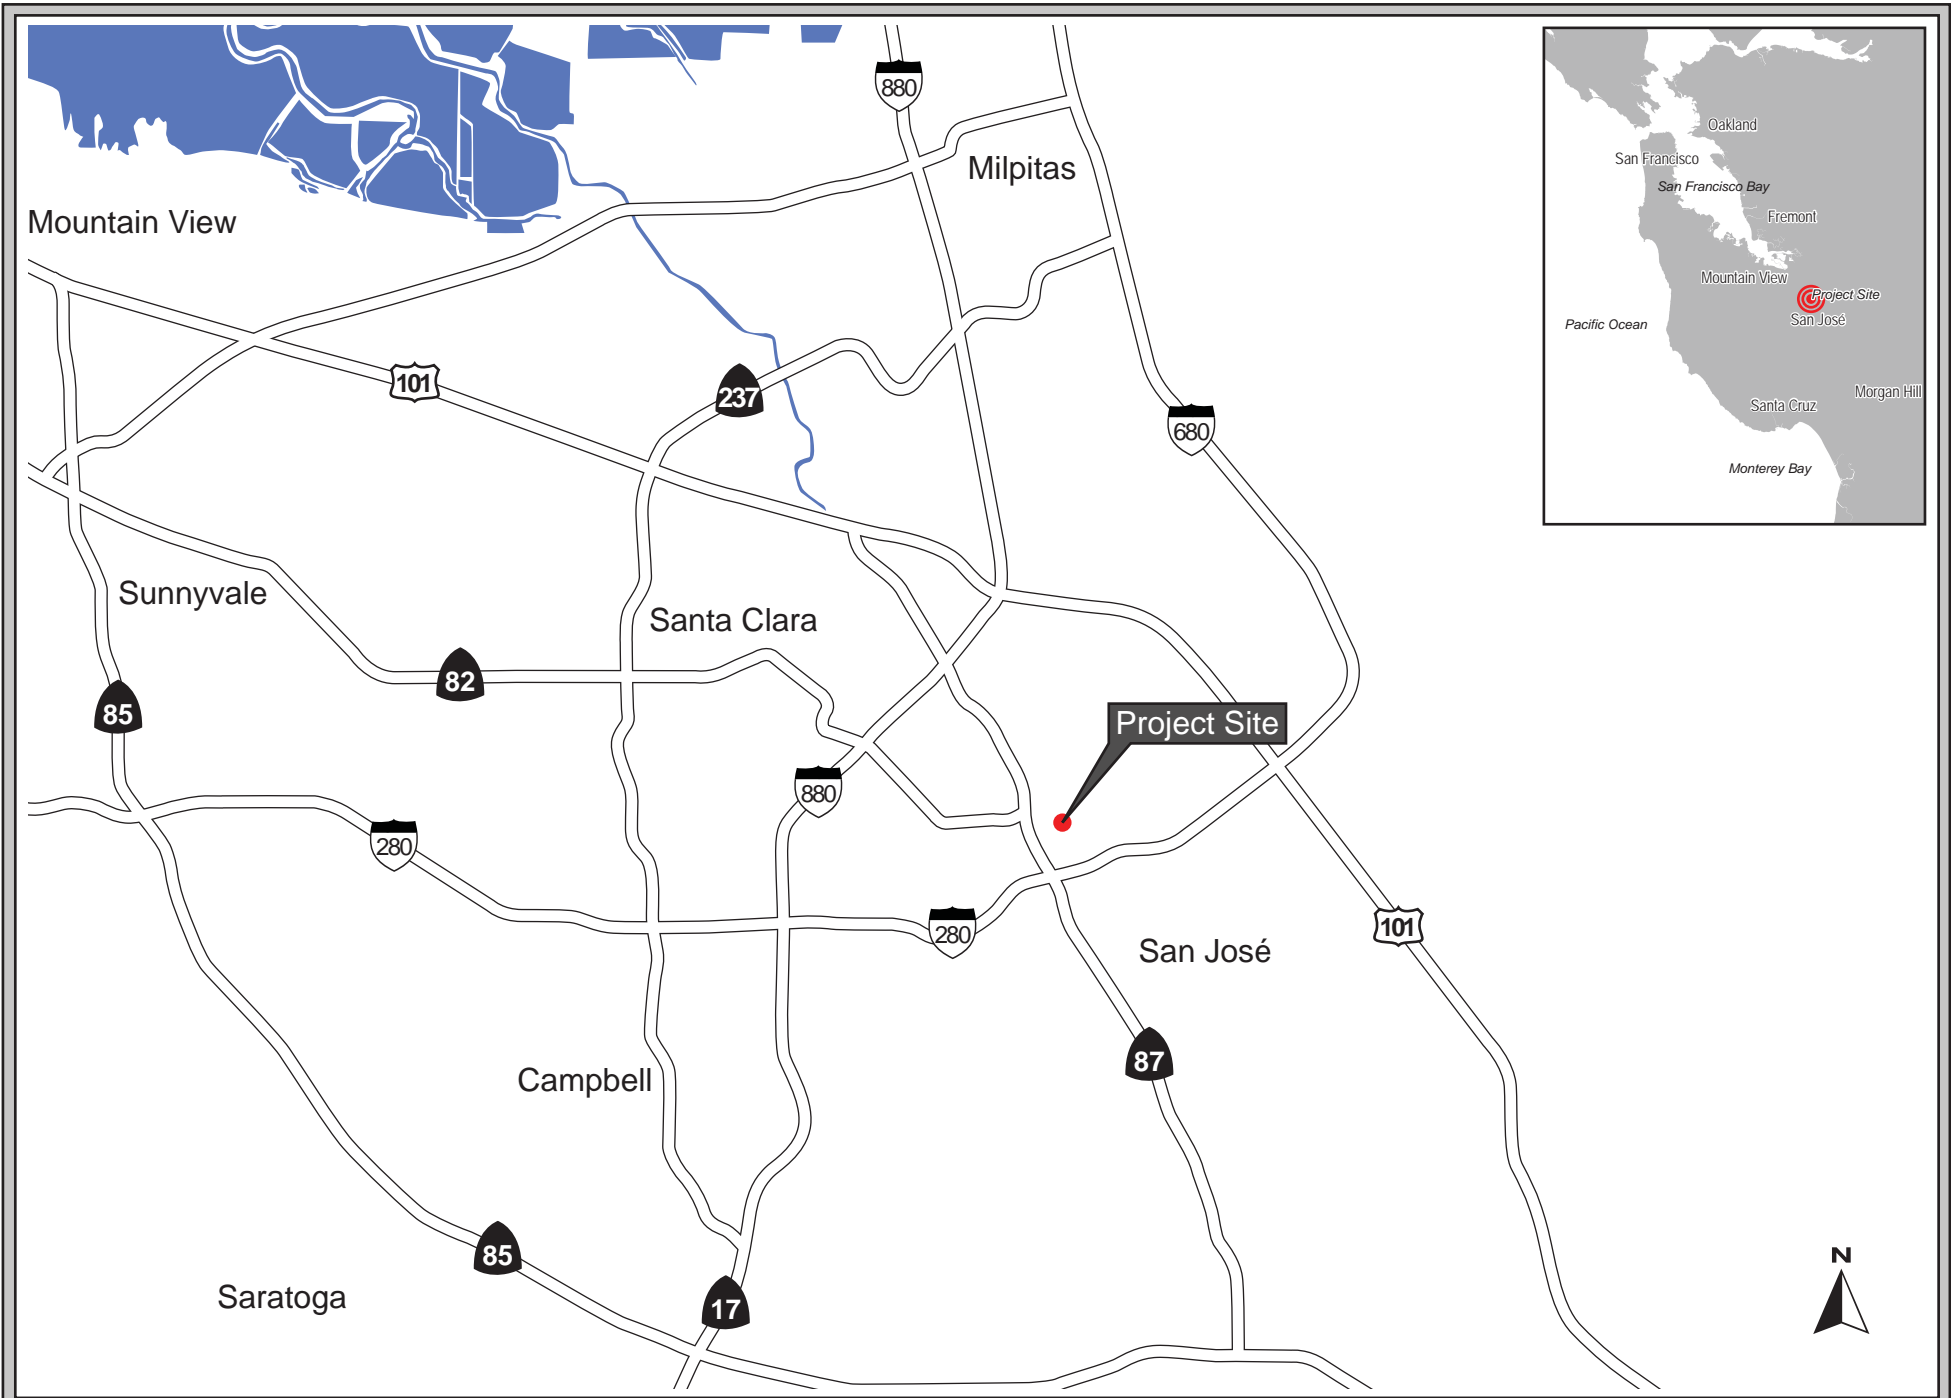

A Subsequent EIR (SEIR) is prepared when it is determined by the discretionary authority that changes proposed in an approved project will require revisions to the previous EIR because of possible new impacts or an increase in severity of previously identified impacts. As the Lead Agency, the City of San José will prepare a SEIR to the Downtown Strategy 2000 Final EIR and the Envision San José 2040 General Plan Final EIR to address the environmental effects of the proposed Museum Place Mixed-Use Project.

The SEIR for the proposed project will be prepared and processed in accordance with the California Environmental Quality Act (CEQA) of 1970, as amended. An Initial Study has been prepared (which will be incorporated in the SEIR as an appendix) to focus the SEIR on potentially significant issues pursuant to CEQA Guidelines Section 15178. In accordance with the requirements of CEQA, the SEIR will include the following:

- A summary of the project;
- A project description;
- A description of the existing environmental setting, environmental impacts, and mitigation measures for the project;
- Alternatives to the project as proposed; and
- Environmental consequences, including (a) any significant environmental effects which cannot be avoided if the project is implemented; (b) any significant irreversible and irretrievable commitments of resources; (c) the growth inducing impacts of the proposed project; and (d) cumulative impacts

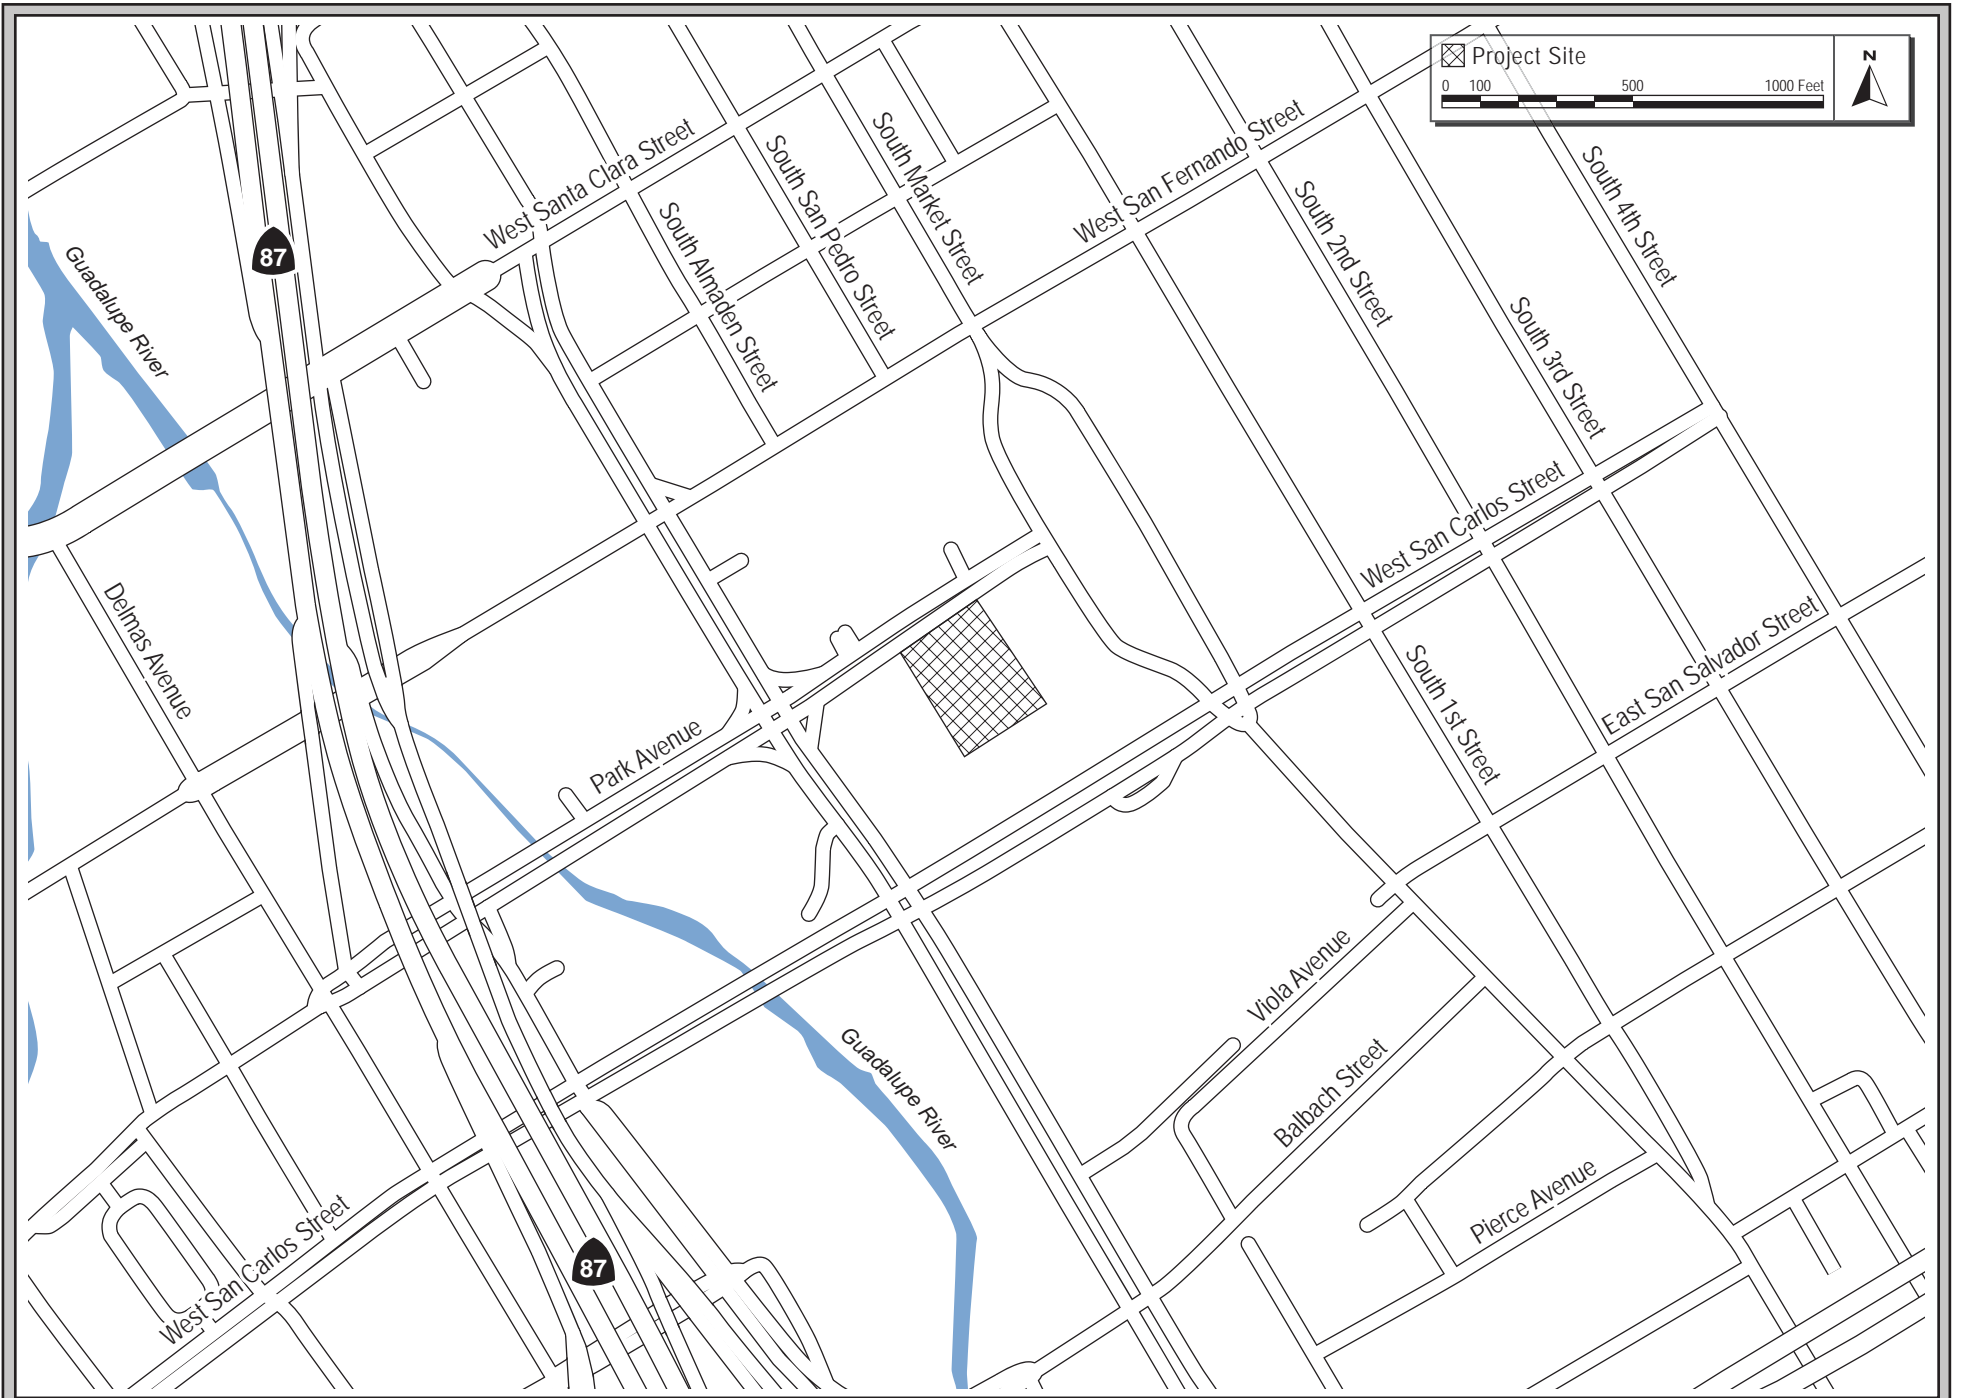

***Project Location***

The approximate 2.35-acre project site is located on Park Avenue between South Market Street and South Almaden Boulevard in downtown San José. The project site is comprised of a single parcel (APN 259-42-023). Regional and vicinity maps of the project site are shown in Figure 1 and Figure 2, respectively.

REGIONAL MAP

FIGURE 1

VICINITY MAP

FIGURE 2

## ***Project Description***

The project site is currently occupied by an approximate 30,000 square foot stand-alone conference and event facility (Parkside Hall) where the adjacent Tech Museum of Innovation hosts exhibits. As proposed, the project would demolish the approximately 30,000 square foot Parkside Hall, and construct a maximum 267-foot (24 stories), 1.16 million square foot, mixed-use building with residential units, hotel rooms, and office and retail space. The project proposes to develop approximately 209,800 square feet of office space, 14,100 square feet of retail space, a hotel with up to 187 rooms, and up to 306 residential units. The building would also include an approximately 60,000 square foot expansion of the Tech Museum.

The project proposes a three-story below-grade parking garage with approximately 1,000 parking stalls. Mechanical lift parking is being proposed on each level in the parking garage. All parking in the garage would be valet only. Vehicular access to the parking garage would be provided via a proposed driveway on Park Avenue.

The project site is designated *Public/Quasi-Public* under the City of San José's adopted General Plan and has a zoning designation of *DC – Downtown Commercial*.

### ***Possible Required Project Approvals:***

1. Site Development Permit
2. Tentative Map
3. Demolition Permit
4. Building Permit
5. Grading Permit

### ***Potential Environmental Impacts of the Project***

The SEIR will identify the significant environmental effects anticipated to result from development of the project as proposed. Mitigation measures will be identified for significant impacts, as warranted. The SEIR will include the following specific environmental categories as related to the proposed project:

#### ***1. Land Use***

The project site is located in a developed urbanized area surrounded by a mix of commercial, hotel, and office land uses. The SEIR will describe the existing land uses adjacent to and within the project area. Land use impacts that will occur as a result of the proposed project will be analyzed, including the consistency of the project with the City's General Plan and zoning code and compatibility of the proposed and existing land uses in the project area.

The project is anticipated to result in a shading impact on the nearby Plaza de Cesar Chavez Park. As a result, shade and shadow impacts resulting from the development will be analyzed. The SEIR will also address and the effect of the project on the City's jobs/housing balance.

## 2. *Aesthetics*

The proposed development will replace a one-story stand-alone facility with a 24-story mixed-use building, in the downtown area of San José. The SEIR will describe the existing visual setting of the project area and the visual changes that are anticipated to occur as a result of the proposed project. The SEIR will also discuss possible light and glare issues from the development.

## 3. *Biological Resources*

The project site is currently developed with a one-story building. Habitats in the project area are low in species diversity and include predominately urban adapted birds and animals. The SEIR will include a tree survey and will identify and discuss potential biological impacts resulting from construction of the project.

## 4. *Cultural Resources*

The project area has been occupied since the late 1700's. Because of the early development on-site, there is the potential for subsurface resources associated with this early development to still be located on-site. Because of the proposed underground parking, the entire site will need to be excavated. The project site is in proximity to two historic buildings, the City National Civic Auditorium and McCabe Hall.

The SEIR will address the impacts to known and unknown buried historic resources on the project site, as well as impacts to potential historic structures near the project site.

## 5. *Transportation*

The project site is located within the Downtown Core. As a result, transportation impacts in the project area were previously evaluated in the Downtown Strategy 2000 FEIR and a full transportation impact analysis is not necessary. A traffic operations analysis will be completed to evaluate the proposed site access/circulation and intersections in the project area to identify any necessary improvements.

## 6. *Air Quality*

The SEIR will address the regional air quality conditions in the Bay Area and discuss the proposed project's impacts to local and regional air quality according to 2011 Bay Area Air Quality Management District (BAAQMD) guidelines and thresholds.

The SEIR will describe the existing air quality conditions in the Bay Area and will evaluate the operational and construction air quality impacts of the proposed project in accordance with current BAAQMD CEQA Guidelines and thresholds.

## 7. *Greenhouse Gas Emissions*

The SEIR will address the project's consistency with the City's Greenhouse Gas Reduction Strategy. Proposed design measures to reduce energy consumption, which in turn would reduce greenhouse gas emissions, will be discussed.

## 8. *Noise and Vibration*

The SEIR will discuss noise that will result from operation of the proposed project, as well as temporary construction noise. Noise levels will be evaluated for consistency with applicable standards and guidelines in the City of San José.

Due to the size of the proposed building, it is reasonable to assume that construction of the project would require the use of other heavy equipment. The SEIR will evaluate the effects of vibration during project construction on nearby structures, including the historic City National Civic Auditorium and McCabe Hall.

## 9. *Energy*

Implementation of the proposed project will result in an increased demand for energy on-site. The SEIR will address the increase in energy usage on-site and proposed design measures to reduce energy consumption.

## 10. *Utilities*

Implementation of the proposed project would result in an increased demand on utilities and public facilities compared to existing conditions. The SEIR will examine the impacts of the project on public services, including utilities such as sanitary and storm drains, water supply/demand, and solid waste management.

## 11. *Public Services*

Implementation of the proposed project would increase the population of the City which will result in an increased demand on public services, including police and fire protection, schools, and recreational facilities. The SEIR will address the availability of public facilities and service systems and the potential for the project to require the construction of new facilities.

## 12. *Hazards and Hazardous Materials*

Development in the project area is a mix of residential, retail, hotel, and office land uses. The SEIR will summarize known hazardous materials conditions on and adjacent to the project site and will address the potential for hazardous materials impacts to result from implementation of the proposed project.

### 13. *Geology*

The project site is located in the most seismically active region in the United States. The SEIR will discuss the possible geological impacts associated with seismic activity and the existing soil conditions on the project site.

### 14. *Hydrology and Water Quality*

Based on the Federal Emergency Management Agency (FEMA) flood insurance rate maps, the SEIR will address the possible flooding issues of the site as well as the effectiveness of the storm drainage system and the projects effect on storm water quality consistent with the requirements of the Regional Water Quality Control Board (RWQCB).

### 15. *Alternatives*

The SEIR will examine alternatives to the proposed project including a “No Project” alternative and one or more alternative development scenarios depending on the impacts identified. Other alternatives that may be discussed could include reduced development alternatives (e.g., smaller project or reduced alternatives), alternative land uses, and/or alternative locations. Alternatives discussed will be chosen based on their ability to reduce or avoid identified significant impacts of the proposed project while achieving most of the identified objectives of the project.

### 16. *Significant Unavoidable Impacts*

The SEIR will identify those significant impacts that cannot be avoided, if the project is implemented as proposed.

### 17. *Cumulative Impacts*

The SEIR will include a Cumulative Impacts section that will address the potentially significant cumulative impacts of the project (particularly the cumulative traffic impacts) when considered with other past, present, and reasonably foreseeable future projects in the development area.

In conformance with the CEQA Guidelines, the SEIR will also include the following sections: 1) consistency with local and regional plans and policies, 2) growth inducing impacts, 3) significant irreversible environmental changes, 4) references and organizations/persons consulted, and 5) EIR authors.

An Initial Study has been prepared and will be provided as an appendix to the SEIR. The Initial Study will include an analysis of the resource areas that have no new significant impacts or no increase in previously identified impacts.
