Ms. Tina Garg, Supervising Planner
Planning, Building & Code Enforcement
City of San José
200 East Santa Clara Street

Dear Ms. Garg,

Please accept the attached previously submitted response letter from the Muwekma Ohlone Tribe as a formal response to this proposed project as well as to the adjacent parcels located on Piercy Road in south San Jose.

When we tried to review the on line information relative to the results of the Cultural Resources studies, we could not find any information relative to site sensitivity and the presence of ancestral heritage cemetery and villages sites within the region, that could contribute to predictive models about our ancestral settlement, mortuary and subsistence activities within the subject parcels.

The on-line Appendix C titled "Historical/Archaeological Literature Review and Assessment," informed us that "this report may discuss locations of specific archaeological sites and is confidential. For this reason, it is not included in this Initial Study. Qualified personnel, however, may request a copy of the report from the City's Planning Division." As a result of this recommendation, we are formally requesting a copy of this "Initial Study."

Furthermore, on the previous Notice of CEQA Posting for the 469 Piercy Road Site Development Project, City File Nos.: H22-014/ER22-075 which we received from you on May 9, 2023, the Notice posted that "The City has performed an environmental review of the project. The environmental review examines the nature and extent of any adverse effects on the environment that could occur if the project is approved and implemented. Based on the review, the City has prepared a **Draft Mitigated Negative Declaration** (MND) for this project. An MND is a statement by the City that the project **will not** have a significant effect on the environment because the project will include mitigation measures that will reduce identified project impacts to a **less than significant level**."

Just a reminder that a similar determination was issued for the 200 Park Avenue Project whereby, the Muwekma Tribe, as the Most Likely Descendant tribal group identified by the Native American Heritage Commission, ended up recovering over 45 ancestral remains which has continued into the 180 Park Avenue project, the THÁMIEN RÚMMEYTAK – THÁMIEN (GUADALUPE) RIVER SITE CA-SCL-128.

A-3

Therefore, we are formally requesting a copy of the Historical/Archaeological Literature Review and Assessment for this project.

Finally, since the submittal of the Tribe's response by Chairwoman Charlene Nijmeh on January 31, 2019, we have not heard back from anyone in the City Planning Department, nor seen evidence that the Tribe's response was included in any published Notice.

A-4

Should you have any questions, please feel free to contact us.

Sincerely,

Alan Leventhal
Muwekma Ohlone Tribal Archaeologist and Ethnohistorian

Hello Ms. Garg,

The land that is beside Tennant Ave the address of which I am not sure which includes 550 Piercy Road is overrun with tall weeds. The weeds have dried out in the hot weather. This poses a fire hazard especially to my home which is 6501 Gravina Loop. We are situated across the street from the empty lot.

Please inform the department that is responsible to mow the land.

Thanks,

Ram and Usha Chandra

PUBLIC REVIEW DRAFT MND: 550 PIERCY RD INDUSTRIAL PROJECT (H22-015)

Post Date: 06/08/2023

550 Piercy Rd Industrial Development Project

FILE NOs: H22-015, ER22-089, T22-015

PROJECT DESCRIPTION

The project application is for a Site Development Permit and Vesting Tentative Map to allow the construction of two industrial buildings on a 28.9-acre single vacant parcel located at 550 Piercy Road in San José, California. The total square footage of the proposed industrial buildings would be 430,000 square feet, with 257,149 square feet for Building 1 and 172,851 square feet for Building 2. Additional

improvements for site circulation, site access, drainage, and infrastructure are included in the proposed project.

LOCATION

The project site is located within the City limits of San José, in Santa Clara County, between Piercy Road to the north and Hellyer Avenue to the south. The project site consists of a single lot that is approximately 28.9-acres in size.

Subject: Comments on 550 Piercy Road Industrial Development MND (SCH NO. 2023060249)

Dear Ms. Garg,

Thank you for the opportunity to comment on the Mitigated Negative Declaration (MND) for the proposed 550 Piercy Road Industrial Development. Please accept and consider these comments on behalf of Golden State Environmental Justice Alliance (GSEJA). Also, Golden State Environmental Justice Alliance formally requests to be added to the public interest list regarding any subsequent environmental documents, public notices, public hearings, and notices of determination for this project. Send all communications to Golden State Environmental Justice Alliance P.O. Box 79222 Corona, CA 92877.

C-1

1.0 Summary

The project proposes the construction and operation of two industrial warehouse buildings on a vacant 28.9 acre site. The total square footage of the proposed industrial buildings would be 430,000 square feet, with 257,149 square feet for Building 1 and 172,851 square feet for Building 2. The total square footage includes approximately 30,000 square feet of ground floor office and 13,985 square feet of mezzanine office, for a total of 43,985 square feet of office space across the two buildings. The proposed project includes 84 loading docks (46 for Building 1 and 38 for Building 2), 347 passenger car parking stalls, and 80 truck/trailer parking stalls.

C-2

2.0 Project Description

The MND does not include a floor plan or detailed grading plan. The basic components of a Planning Application include a site plan, floor plan, grading plan, elevations, and written narrative.

C-3

The figures labeled floor plans are actually site plans and do not provide information about the internal layout of the buildings. Additionally, Figure 8: Grading Plan has been edited for public review and does not provide any detailed information such as the earthwork quantity notes. The edited version of the grading plan inserted for public review is meaningless and provides no useful information. The MND has excluded these required application items in their whole and true form from public review, which does not comply with CEQA’s requirements for adequate informational documents and meaningful disclosure (CEQA § 15121 and 21003(b)). Incorporation by reference (CEQA § 15150 (f)) is not appropriate as these documents in their whole and true form contribute directly to analysis of the problem at hand. Providing this information is vital as the Project Description states that “development of the project would involve the excavation of approximately 167,308 cubic yards (CY) of material to be excavated from the site and used as backfill on the site. No import or export of soil would occur as part of the proposed project,” but there is no method for the public to verify this claim. The quantity of import/exported soil material directly informs the quantity of necessary truck hauling trips during the grading phase of construction. An EIR must be proposed to include all application items in their whole and true forms for review, analysis, and comment by the public and decision makers.

Con't

3.0 Environmental Evaluation

C. Air Quality, F. Energy, and H. Greenhouse Gas Emissions

Please refer to attachments from SWAPE for a complete technical commentary and analysis.

The MND does not include for analysis relevant environmental justice issues in reviewing potential impacts, including cumulative impacts from the proposed project. This is especially significant as the surrounding community is burdened by pollution. According to CalEnviroScreen 4.0¹, CalEPA’s screening tool that ranks each census tract in the state for pollution and socioeconomic vulnerability, the proposed project’s census tract (6085512001) is more polluted on several indicators compared to the rest of the state overall. The surrounding community, including residences adjacent to the north, bears the impact of multiple sources of pollution. For example, the project census tract ranks in the 85th percentile for traffic impacts. Major roads and highways can bring air pollutants and noise into nearby neighborhoods². Exhaust fumes contain toxic chemicals that can damage DNA, cause cancer, make breathing difficult, and cause low weight and premature births³. Children who live or go to schools near busy roads have higher rates of asthma and other lung diseases than children in areas farther from roads⁴.

C-4
↓

¹ CalEnviroScreen 4.0 <https://oehha.ca.gov/calenviroscreen/report/calenviroscreen-40>

² OEHHA Traffic Impacts <https://oehha.ca.gov/calenviroscreen/indicator/traffic-density>

³ Ibid.

⁴ Ibid.

The project census tract also ranks in the 97th percentile for hazardous waste impacts. Hazardous waste generators and facilities contribute to the contamination of air, water and soil near waste generators and facilities can harm the environment as well as people⁵.

The project census tract bears more impacts from cleanup sites than 84% of the state. Chemicals in the buildings, soil, or water at cleanup sites can move into nearby communities through the air or movement of water⁶. When water is contaminated by pollutants, the water bodies are considered impaired⁷. These impairments are related to the amount of pollution that has occurred in or near the water body⁸.

The census tract also ranks in the 43rd percentile for drinking water, which indicates that it ranks with the worst quality drinking water in the state. Poor communities areas are exposed to contaminants in their drinking water more often than people in other parts of the state⁹.

California s Building Energy Code Compliance Software (CBECC) is the State’s only approved energy compliance modeling software for non-residential buildings in compliance with Title 24¹⁰. CalEEMod is not listed as an approved software. The CalEEMod-based modeling in the MND and appendices does not comply with the 2022 Building Energy Efficiency Standards and under-reports the project s significant Energy impacts and fuel consumption to the public and decision makers. Since the MND did not accurately or adequately model the energy impacts in compliance with Title 24, a finding of significance must be made. An EIR with modeling using the approved software (CBECC) must be circulated for public review in order to adequately analyze the project s significant environmental impacts. This is vital as the MND utilizes CalEEMod as a source in its methodology and analysis, which is clearly not the approved software.

K. Land Use and Planning

The MND does not provide a consistency analysis with all land use plans, policies, or regulations adopted for the purpose of avoiding or mitigating an environmental effect. The project has significant potential to conflict with many of these items, including but not limited to the following

⁵ OEHHA Hazardous Waste Generators and Facilities

Cont
C-5
C-6
↓

from the General Plan and an EIR must be prepared with a consistency analysis in order to provide an adequate and accurate environmental document:

1. TR-1.2 Consider impacts on overall mobility and all travel modes when evaluating transportation impacts of new developments or infrastructure projects.
2. TR-3.3 As part of the development review process, require that new development along existing and planned transit facilities consist of land use and development types and intensities that contribute toward transit ridership. In addition, require that new development is designed to accommodate and to provide direct access to transit facilities.
3. TR-5.5 Require that new development, which includes new public or private streets, connect these streets with the existing public street network and prohibit the gating of private streets with the intention of restricting public access. Furthermore, where possible, require that the street network within a given project consists of integrated short blocks to facilitate bicycle and pedestrian travel and access.
4. TR-6.1 Minimize potential conflicts between trucks and pedestrian, bicycle, transit, and vehicle access and circulation on streets with truck travel.
5. TR-6.4 Plan industrial and commercial development so that truck access through residential areas is avoided. Minimize truck travel on streets designated in the Envision General Plan as Residential Streets.
6. TR-7.1 Require large developments and employers to develop and maintain TDM programs with TDM services provided for their residents, full-time and subcontracted workers, and visitors to promote use of non-automobile modes and reduce the vehicle trips.
7. Goal TR-9 – Reduction of Vehicle Miles Traveled Reduce Vehicle Miles Traveled (VMT) per service population by 20% (2030 goal) and by 45% (2040 goal), from the 2017 levels.
8. MS-2.11 Require new development to incorporate green building practices, including those required by the Green Building Ordinance. Specifically, target reduced energy use through construction techniques (e.g., design of building envelopes and systems to maximize energy performance), through architectural design (e.g., design to maximize cross ventilation and interior daylight) and through site design techniques (e.g., orienting buildings on sites to maximize the effectiveness of passive solar design).

9. MS-3.1 Require water-efficient landscaping, which conforms to the State’s Model Water Efficient Landscape Ordinance, for all new commercial, institutional, industrial, and developer-installed residential development unless for recreation needs or other area functions.
10. MS-10.5 In order to reduce vehicle miles traveled and traffic congestion, require new development within 2,000 feet of an existing or planned transit station to encourage the use of public transit and minimize the dependence on the automobile through the application of site design guidelines and transit incentives.
11. MS-11.2 For projects that emit toxic air contaminants, require project proponents to prepare health risk assessments in accordance with BAAQMD-recommended procedures as part of environmental review and employ effective mitigation to reduce possible health risks to a less than significant level. Alternatively, require new projects (such as, but not limited to, industrial, manufacturing, and processing facilities) that are sources of TACs to be located an adequate distance from residential areas and other sensitive receptors.
12. MS-11.3 Review projects generating significant heavy duty truck traffic to designate truck routes that minimize exposure of sensitive receptors to TACs and particulate matter.
13. MS-11.8 For new projects that generate truck traffic, require signage which reminds drivers that the State truck idling law limits truck idling to five minutes.
14. MS-19.1 Require new development to contribute to the cost-effective expansion of the recycled water system in proportion to the extent that it receives benefit from the development of a fiscally and environmentally sustainable local water supply.
15. MS-21.6 As a condition of new development, require the planting and maintenance of both street trees and trees on private property to achieve a level of tree coverage in compliance with and that implements City laws, policies or guidelines.

↑
C-6
Con't
↓

N. Population and Housing

The MND concludes that impacts to Population and Housing will be less than significant because “employees would be sourced *largely* from the City’s existing population, as well as the *populations of neighboring cities*, and would not require the construction of additional housing to

↓
C-7

accommodate employees.” The geographic area of “neighboring cities” of the project site is undefined and relying on the entire labor force within an undefined distance, notably the greater Bay Area region, to fill the project’s construction and operational jobs will increase project VMT (that has already been determined to be a significant impact) and emissions during all phases of construction and operations. An EIR must be prepared to account for longer worker trip distances. Additionally, an EIR must also provide demographic and geographic information on the location of qualified workers to fill these positions in order to provide an accurate environmental analysis.

C-7
Con't

The MND states that the proposed project “would generate approximately 160 new employees,” but does not provide the methodology for this calculation or the source of the employment generation. Additionally, the MND does not provide any calculation of the project’s construction employees. The City’s 2040 General Plan Draft EIR¹¹ provides an employment generation calculation that industrial uses generate 1 employee per 1,000 square feet of building area. Application of this ratio results in the following calculation:

Total building area: 430,000 sf/ 1,000 = 430
Total: 430 employees

The MND does not meaningfully discuss the project’s compliance with the Association of Bay Area Governments (ABAG) RTP/SCS (Plan Bay Area 2050). Plan Bay Area 2050’s Growth Pattern¹² notes that the East Santa Clara County area (portions of Milpitas and San Jose including the project site) will add 49,000 jobs between 2015 - 2050. Utilizing the General Plan employment generation calculation of 430 employees, the project represents 0.87% of the East Santa Clara County area employment growth from 2015 - 2050. A single project accounting for this amount of the projected employment and/or population over 35 years represents a significant amount of growth. An EIR must be prepared to include this analysis, and also provide a cumulative analysis discussion of projects approved since 2015 and projects “in the pipeline” in San Jose and Milpitas to determine if the project will exceed Plan Bay Area 2050’s employment and/or population growth forecast for East Santa Clara County. For example, other recent industrial projects such as Qume and Commerce¹³ (714,491 sf warehouse; 715 employees), 469 Piercy Road¹⁴ (134,605 sf warehouse; 135 employees), 350 West Trimble Road¹⁵ (208,000 sf warehouse; 208 employees),

C-8

¹¹ City of San José. Envision 2040 General Plan Draft EIR
<https://www.sanjoseca.gov/home/showpublisheddocument/22041/636688304350830000>

¹² Plan Bay Area 2050 Growth Pattern
https://www.planbayarea.org/sites/default/files/FinalBlueprintRelease_December2020_GrowthPattern_Jan2021Update.pdf

¹³ Qume and Commerce <https://ceqanet.opr.ca.gov/2022010603/3>

¹⁴ 469 Piercy Road <https://ceqanet.opr.ca.gov/2023050199>

¹⁵ 350 West Trimble Road <https://ceqanet.opr.ca.gov/2023040034>

1535-1575 Industrial Avenue¹⁶ (71,550 sf warehouse; 72 employees), Silver Creek Valley Road Warehouse¹⁷ (281,873 sf warehouse; 282 employees), 455 Piercy Road Industrial Warehouse¹⁸ (121,580 sf warehouse; 122 employees), 1953 Concourse Drive Project¹⁹ (126,700 sf warehouse; 127 employees), 5853 Rue Ferrari²⁰ (302,772 sf warehouse; 303 employees), and 650 North King Road Industrial²¹ (225,280 sf warehouse; 226 employees) combined with the proposed project will cumulatively generate 2,620 employees, which is 5.3% of the area’s employment growth forecast over 35 years accounted for by only ten recent industrial projects submitted in the past two years. The amount of growth accounted for by cumulative projects multiplies exponentially when other commercial and industrial development activity approved since 2015 are added to the calculation. An EIR must be prepared to include this information for analysis and also include a cumulative development analysis of projects approved since 2015 and projects in the pipeline” to determine if the proposed project exceeds ABAG s and/or the City’s growth forecasts. Additionally, an EIR must also provide demographic and geographic information on the location of qualified workers to fill these positions in order to provide an accurate environmental analysis.

↑
C-8
Cont

Additionally, utilizing the City’s February 2022 Development Activity Forecast²² and the City General Plan EIR’s employment generation ratio that industrial projects generate 1 employee per 1,000 square feet, it can be concluded that the City has forthcoming 920 employees from industrial projects constructed in 2020-21; 5,965 employees from industrial projects under construction; and 24,910 employees from industrial projects approved but not yet constructed for a total of 31,795 employees. Utilizing the cumulative industrial employment generated since 2020 and the proposed project, the City’s 32,510 industrial employees represents 66.3% of its projected job growth from 2015-2050.

C-9

Q. Transportation

The MND concludes that the project generates 14.69 daily VMT per employee, which exceeds the regional threshold of 14.37 VMT per employee and the project would potentially have a significant transportation impact. To reduce the project’s home-based work VMT to below the 14.37 VMT per employee regional threshold, the MND proposes mitigation measures to reduce the project’s VMT by 4.8% to 14.11 VMT per worker:

C-10
↓

¹⁶ 1535-1575 Industrial Avenue <https://ceqanet.opr.ca.gov/2022110172>

¹⁷ Silver Creek Valley Road Warehouse <https://ceqanet.opr.ca.gov/2022080654>

¹⁸ 455 Piercy Road Industrial Warehouse <https://ceqanet.opr.ca.gov/2022070051>

¹⁹ 1953 Concourse Drive Project <https://ceqanet.opr.ca.gov/2022020541>

²⁰ 5853 Rue Ferrari <https://ceqanet.opr.ca.gov/2022010266>

²¹ 650 North King Road Industrial <https://ceqanet.opr.ca.gov/2021120434>

²² San Jose February 2022 Development Activity Forecast
<https://www.sanjoseca.gov/home/showpublisheddocument/83462/637835432878970000>

1. Traffic Calming Measures and Bike Access Improvements
2. Pedestrian Network Improvements

However, the MND does not provide any meaningful evidence to support the conclusion that these TDM strategies will reduce the project's home-based work VMT by 4.8%. The mitigation measures are unenforceable mitigation in violation of CEQA § 21081.6 (b). The MND has not provided a quantified calculation of the reduced VMT as a result of the proposed mitigation measures. It is not possible for the City to ensure that the mitigation measures will result in reduced VMT by project employees and be implemented continuously, at all times, throughout the life of the project and maintain a VMT reduction to less than significant levels at all times. The efficacy of the proposed mitigation measures and reduction of VMT impacts below the applicable thresholds cannot be assured, the project's VMT impact is therefore considered significant and unavoidable. An EIR must be prepared to include a finding of significance because there is no possible assurance of the percentage of project employees that would utilize non-automobile travel associated with the mitigation measures and mitigation of the project's VMT impact to less than significant is not feasible.

C-10
Con't

Additionally, the MND has underreported the quantity VMT generated by the proposed project operations. The MND only includes home-based work trips for VMT analysis and excludes the project's truck/trailer/delivery van traffic. However, the MND does not provide a statutory source of exemption for medium/heavy trucks and/or VMT generated during the course of daily business operations.

The term "automobile" is not defined in the CEQA statute and excluding truck trips/trips generated by employees during the course of their work day at the proposed distribution facility does not provide an adequate or accurate analysis of the "worst-case scenario" for environmental impacts. Widespread public understanding and perception indicates that trucks, including medium/heavy-duty truck/trailer trips associated with the industrial nature of warehouse operations, are automobiles. An EIR must be prepared to include all truck/trailer activity for quantified VMT analysis. The operational nature of industrial/warehouse uses involves high rates of truck/trailer VMT due to traveling from large import hubs to regional distribution centers to their final delivery destinations. Once employees arrive at work, they will conduct their jobs by driving delivery vans and trucks across the region as part of the daily operations as a distribution facility, which will drastically increase project-generated VMT. The project's truck/trailer and delivery van activity is unable to utilize public transit or active transportation and it is misleading to the public and decision makers to exclude this activity from VMT analysis. An EIR must be prepared to reflect a quantified VMT analysis that includes all truck/trailer and delivery van activity.

C-11

The MND has not adequately analyzed the project’s potential to substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses; or the project’s potential to result in inadequate emergency access. The Traffic Appendix includes Figure 13: Freight Truck Turning Template for Northern Driveway on Hellyer Avenue, Figure 14 Freight Truck Turning Template for Southern Driveway on Hellyer Avenue, and Figure 15 Freight Truck Turning Template for Northern Driveway on Piercy Road. Each Figure contains separate exhibits for inbound and outbound trucks at each of the truck access points. The exhibits are provided separately in order to avoid providing an exhibit that depicts two trucks simultaneously entering and exiting the site. The separate diagrams appear to show that the truck turning radii will overlap, meaning that two trucks cannot enter and exit the site simultaneously and there is not sufficient space available to accommodate heavy truck maneuvering. Additionally, Figure 16 Freight Truck Turning Template for On-Site Circulation depicts overlapping lines between inbound and outbound trucks, indicating that there is not sufficient circulation space and they will collide. An EIR must be prepared to include a finding of significance due to these significant and unavoidable impacts.

C-12

U. Mandatory Findings of Significance

An EIR must be prepared to include a cumulative analysis discussion here to demonstrate the impact of the proposed project in a cumulative setting. For example, other recent industrial projects such a Qume and Commerce²³ (714,491 sf warehouse; 715 employees), 469 Piercy Road²⁴ (134,605 sf warehouse; 135 employees), 350 West Trimble Road²⁵ (208,000 sf warehouse; 208 employees), 1535-1575 Industrial Avenue²⁶ (71,550 sf warehouse; 72 employees), Silver Creek Valley Road Warehouse²⁷ (281,873 sf warehouse; 282 employees), 455 Piercy Road Industrial Warehouse²⁸ (121,580 sf warehouse; 122 employees), 1953 Concourse Drive Project²⁹ (126,700 sf warehouse; 127 employees), 5853 Rue Ferrari³⁰ (302,772 sf warehouse; 303 employees), and 650 North King Road Industrial³¹ (225,280 sf warehouse; 226 employees) combined with the proposed project will cumulatively generate 2,620 employees, which is 5.3% of the area’s employment growth forecast over 35 years accounted for by only ten recent industrial projects submitted in the past two years.

C-13

²³ Qume and Commerce <https://ceqanet.opr.ca.gov/2022010603/3>

²⁴ 469 Piercy Road <https://ceqanet.opr.ca.gov/2023050199>

²⁵ 350 West Trimble Road <https://ceqanet.opr.ca.gov/2023040034>

²⁶ 1535-1575 Industrial Avenue <https://ceqanet.opr.ca.gov/2022110172>

²⁷ Silver Creek Valley Road Warehouse <https://ceqanet.opr.ca.gov/2022080654>

²⁸ 455 Piercy Road Industrial Warehouse <https://ceqanet.opr.ca.gov/2022070051>

²⁹ 1953 Concourse Drive Project <https://ceqanet.opr.ca.gov/2022020541>

³⁰ 5853 Rue Ferrari <https://ceqanet.opr.ca.gov/2022010266>

³¹ 650 North King Road Industrial <https://ceqanet.opr.ca.gov/2021120434>

The amount of growth accounted for by cumulative projects multiplies exponentially when other commercial and industrial development activity approved since 2015 are added to the calculation. The MND has not provided evidence that the growth generated by the proposed project was anticipated by the General Plan, RTP/SCS, or AQMP. An EIR must be prepared to include this information for analysis and also include a cumulative development analysis of projects approved since 2015 and projects in the pipeline” to determine if the proposed project exceeds ABAG’s and/or the City’s growth forecasts.

↑
C-13
Con't

Conclusion

For the foregoing reasons, GSEJA believes the MND is flawed and an EIR must be prepared for the proposed project and circulated for public review. Golden State Environmental Justice Alliance requests to be added to the public interest list regarding any subsequent environmental documents, public notices, public hearings, and notices of determination for this project. Send all communications to Golden State Environmental Justice Alliance P.O. Box 79222 Corona, CA 92877.

**Subject: Comments on the 550 Piercy Road Industrial Development Project (SCH No.
 2023060249)**

Dear Mr. Ho,

We have reviewed the June 2023 Initial Study and Mitigated Negative Declaration (“IS/MND”) for the 550 Piercy Road Industrial Development (“Project”) located in the City of San Jose (“City”). The Project proposes to construct 430,000-square-feet (“SF”) of industrial space and 427 parking spaces on the 28.9-acre site.

Our review concludes that the IS/MND fails to adequately evaluate the Project’s air quality and greenhouse gas impacts. As a result, emissions associated with construction and operation of the proposed Project may be underestimated and inadequately addressed. An Environmental Impact Report (“EIR”) should be prepared to adequately assess and mitigate the potential air quality and greenhouse gas impacts that the project may have on the environment.

Air Quality

Unsubstantiated Input Parameters Used to Estimate Project Emissions

The Air Quality Assessment (“AQA”), included as Appendix A to the IS/MND, relies on emissions calculated with California Emissions Estimator Model (“CalEEMod”) Version 2020.4.0 (p. 44).¹ CalEEMod provides recommended default values based on site-specific information, such as land use type, meteorological data, total lot acreage, project type and typical equipment associated with project type. If more specific project information is known, the user can change the default values and input project-

¹ “CalEEMod Version 2020.4.0.” California Air Pollution Control Officers Association (CAPCOA), May 2021, available at: <http://www.aqmd.gov/caleemod/download-model>.

specific values, but the California Environmental Quality Act (“CEQA”) requires that such changes be justified by substantial evidence. Once all of the values are inputted into the model, the Project’s construction and operational emissions are calculated, and “output files” are generated. These output files disclose to the reader what parameters are utilized in calculating the Project’s air pollutant emissions and make known which default values are changed as well as provide justification for the values selected.

When reviewing the Project’s CalEEMod output files, provided in the AQA as Appendix A to the IS/MND, we found that several model inputs are not consistent with information disclosed in the IS/MND. As a result, the Project’s construction and operational emissions may be underestimated. An EIR should be prepared to include an updated air quality analysis that adequately evaluates the impacts that operation of the Project will have on local and regional air quality.

Underestimated Parking Land Use Size

According to the IS/MND:

“The proposed project includes 84 loading docks (46 for Building 1 and 38 for Building 2), 347 automotive parking stalls (including 12 accessible parking spaces, 140 electric vehicle capable parking spaces, 36 spaces with Electric Vehicle Supply Equipment (EVSE), and 8 clean air spaces), 28 motorcycle stalls, 36 bicycle spaces (10 long-term spaces and 26-short-term spaces), and 80 trailer parking stalls” (emphasis added) (p. 3).

As such, the model should have included 427 parking spaces.² However, review of the CalEEMod output files demonstrates that the “550 Piercy Rd” model includes only 334 parking spaces (see excerpt below) (Appendix A, pp. 33).

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area
Unrefrigerated Warehouse-No Rail	430.00	1000sqft	29.00	430,000.00
Parking Lot	334.00	Space	0.00	133,600.00

As demonstrated above, the amount of parking spaces included in the models is underestimated by 93 spaces.³ This underestimation presents an issue, as the square footage of parking land uses is used for certain calculations such as determining the area to be painted and stripped (i.e., VOC emissions from architectural coatings) and area to include lighting (i.e., energy impacts).⁴ By underestimating the proposed parking land use size, the models may underestimate the Project’s construction-related and operational emissions and should not be relied upon to determine Project significance.

² Calculated: 347 automotive parking spaces + 80 trailer parking stalls = 427 total parking spaces.

³ Calculated: (427 proposed parking spaces) – (334 parking spaces) = 93 underestimated stalls.

⁴ “CalEEMod User’s Guide.” California Air Pollution Control Officers Association (CAPCOA), May 2021, available at: <https://www.aqmd.gov/calceemod/user’s-guide>, p. 29.

Unsubstantiated Reductions to Worker, Vendor, and Hauling Trip Numbers

Review of the CalEEMod output files demonstrates that the “550 Piercy Rd” model includes several changes to the default worker, vendor, and hauling trip numbers (see excerpt below) (Appendix A, pp. 36, 37).

Table Name	Column Name	Default Value	New Value
tblTripsAndVMT	HaulingTripNumber	42,023.00	0.00
tblTripsAndVMT	VendorTripNumber	92.00	0.00
tblTripsAndVMT	WorkerTripNumber	47.00	0.00
tblTripsAndVMT	WorkerTripNumber	237.00	0.00
tblTripsAndVMT	WorkerTripNumber	5.00	0.00
tblTripsAndVMT	WorkerTripNumber	20.00	0.00
tblTripsAndVMT	WorkerTripNumber	15.00	0.00
tblTripsAndVMT	WorkerTripNumber	18.00	0.00

As demonstrated above, the models reduce the worker, vendor, and hauling trip numbers to zero. As previously mentioned, the CalEEMod User’s Guide requires any changes to model defaults be justified.⁵ According to the “User Entered Comments & Non-Default Data” table, the justification provided for these changes is:

“EMFAC2021 adjustment 0 trips, building const = 1,644 concrete truck round trips, paving = 861 round trips. Estimated from Google earth overlay of site plan” (Appendix A, pp. 34).

However, these changes remain unsupported, as the justification fails to discuss the reason for the worker, vendor, and hauling trip numbers being set to zero. Furthermore, the IS/MND and associated documents fail to mention or justify the revised worker, vendor, and hauling trip numbers whatsoever. This is incorrect, as previously mentioned according to the CalEEMod User’s Guide:

“CalEEMod was also designed to allow the user to change the defaults to reflect site- or project-specific information, when available, provided that the information is supported by substantial evidence as required by CEQA.”⁶

Here, as the IS/MND and associated documents fail to provide substantial evidence to support the revised worker, vendor and hauling trip numbers, we cannot verify the changes.

These unsubstantiated reductions present an issue, as CalEEMod uses the worker, vendor, and hauling trip numbers to estimate the construction-related emissions associated with on-road vehicles.⁷ By including unsubstantiated changes to the default worker, vendor, and hauling trip numbers, the model

⁵ “CalEEMod User’s Guide.” California Air Pollution Control Officers Association (CAPCOA), May 2021, available at: <https://www.aqmd.gov/caleemod/user's-guide>, p. 1, 14.

⁶ “CalEEMod User’s Guide.” California Air Pollution Control Officers Association (CAPCOA), May 2021, available at: <https://www.aqmd.gov/caleemod/user's-guide>, p. 13, 14.

⁷ “CalEEMod User’s Guide.” California Air Pollution Control Officers Association (CAPCOA), May 2021, available at: <https://www.aqmd.gov/caleemod/user's-guide>, p. 34.

may underestimate the Project’s mobile-source construction-related emissions and should not be relied upon to determine Project significance.

Incorrect Application of Tier 4 Interim Mitigation

Review of the CalEEMod output files demonstrates that the “550 Piercy Rd” model includes the following construction-related mitigation measures (see excerpt below) (Appendix A, pp. 59).

3.1 Mitigation Measures Construction

Use Cleaner Engines for Construction Equipment
 Water Exposed Area
 Reduce Vehicle Speed on Unpaved Roads

As a result, the model assumes that the Project’s off-road construction equipment fleet would meet Tier 4 interim emissions standards (see excerpt below) (Appendix A, pp. 34).

Table Name	Column Name	Default Value	New Value
tbiConstEquipMitigation	Tier	No Change	Tier 4 Interim
tbiConstEquipMitigation	Tier	No Change	Tier 4 Interim
tbiConstEquipMitigation	Tier	No Change	Tier 4 Interim
tbiConstEquipMitigation	Tier	No Change	Tier 4 Interim
tbiConstEquipMitigation	Tier	No Change	Tier 4 Interim

Note: Screenshot does not include all the applicable changes.

As previously mentioned, the CalEEMod User’s Guide requires any changes to model defaults be justified.⁸ According to the “User Entered Comments & Non-Default Data” table, the justification provided for these changes is:

“BMPs, tier 4 interim mitigation” (Appendix A, pp. 24).

However, the assumption that the Project’s off-road construction equipment fleet would meet Tier 4 interim emissions standards remains unsupported for two reasons.

First, the IS/MND and associated documents fail to mention or justify the inclusion of Tier 4 interim emissions standards whatsoever. This is incorrect, as according to the CalEEMod User’s Guide:

“CalEEMod was also designed to allow the user to change the defaults to reflect site- or project-specific information, when available, provided that the information is supported by substantial evidence as required by CEQA.”⁹

⁸ “CalEEMod User’s Guide Version 2020.4.0.” California Air Pollution Control Officers Association (CAPCOA), May 2021, available at: <https://www.aqmd.gov/caleemod/user's-guide>, p. 1, 14.

⁹ “CalEEMod User’s Guide.” California Air Pollution Control Officers Association (CAPCOA), May 2021, available at: <https://www.aqmd.gov/caleemod/user's-guide>, p. 13, 14.

As such, until additional information becomes available that substantiates the above-mentioned construction-related mitigation measures, we are unable to verify that the inclusion of Tier 4 interim emissions standards in the model are an accurate reflection of the proposed construction equipment.

Second, the IS/MND fails to explicitly require these standards through formal mitigation measures. This is incorrect, as according to the Association of Environmental Professionals (“AEP”) *CEQA Portal Topic Paper* on mitigation measures:

“While not ‘mitigation’, a good practice is to include those project design feature(s) that address environmental impacts in the mitigation monitoring and reporting program (MMRP). Often the MMRP is all that accompanies building and construction plans through the permit process. If the design features are not listed as important to addressing an environmental impact, it is easy for someone not involved in the original environmental process to approve a change to the project that could eliminate one or more of the design features without understanding the resulting environmental impact” (emphasis added).¹⁰

As demonstrated in the excerpt above, measures that are not formally included in the mitigation monitoring and reporting program (“MMRP”) may be eliminated from the Project’s design altogether. As the use of construction equipment with Tier 4 interim emissions standards are not formally included as mitigation measures, we cannot guarantee that these standards would be implemented, monitored, and enforced on the Project site. Consequently, the model’s assumption that the off-road construction equipment fleet would adhere to Tier 4 interim emissions standards is incorrect.

Unsubstantiated Changes to Wastewater System Treatment Percentages

Review of the CalEEMod output files demonstrates that the “550 Piercy Rd” model includes several changes to the default wastewater treatment system percentage (see excerpt below) (Appendix A pp. 54).

Table Name	Column Name	Default Value	New Value
tblWater	AerobicPercent	87.46	100.00
tblWater	AerobicPercent	87.46	100.00
tblWater	AnaerobicandFacultativeLagoonsPercent	2.21	0.00
tblWater	AnaerobicandFacultativeLagoonsPercent	2.21	0.00
tblWater	SepticTankPercent	10.33	0.00
tblWater	SepticTankPercent	10.33	0.00

As demonstrated in the excerpt above, the model assumes that the Project’s wastewater would be treated 100% aerobically. As previously mentioned, the CalEEMod User’s Guide requires any changes to model defaults be justified.¹¹ According to the “User Entered Comments & Non-Default Data” table, the justification provided for these changes is:

¹⁰ “CEQA Portal Topic Paper Mitigation Measures.” AEP, February 2020, available at: <https://cegaportal.org/tp/CEQA%20Mitigation%202020.pdf>, p. 6.

¹¹ “CalEEMod User’s Guide.” California Air Pollution Control Officers Association (CAPCOA), May 2021, available at: <https://www.aqmd.gov/caleemod/user's-guide>, p. 1, 14.

“Wastewater treatment 100% aerobic - no septic tanks or lagoons” (Appendix A, pp. 34).

However, review of the San Jose-Santa Clara Regional Wastewater Facilities treatment process reveals the use of anaerobic bacteria in the digesters phase of wastewater treatment.¹² As such, the assumption that the Project’s wastewater would be treated 100% aerobically is incorrect.

These unsubstantiated changes present an issue, as each type of wastewater treatment system is associated with different GHG emission factors, which are used by CalEEMod to calculate the Project’s total GHG emissions.¹³ By including unsubstantiated changes to the default wastewater treatment system percentages, the model may underestimate the Project’s GHG emissions and should not be relied upon to determine Project significance.

Greenhouse Gas

Failure to Adequately Evaluate Greenhouse Gas Impacts

According to the GHG Reduction Strategy Compliance Checklist, provided as Appendix E to the IS/MND, the Project would be consistent with the City’s Greenhouse Gas Reduction Strategy (“GHGRS”). However, the IS/MND fails to quantify the Project’s total greenhouse gas (“GHG”) emissions whatsoever. As such, we are unable to verify that the Project would not have a significant GHG impact. An EIR should be prepared to include a GHG analysis which adequately evaluates the Project’s emissions. Until such an analysis is prepared, the Project should not be approved.

Furthermore, it is policy of the State that eligible renewable energy resources and zero-carbon resources supply 100% of retail sales of electricity to California end-use customers by December 31, 2045. While the IS/MND states that the Project would include a “solar ready rooftop,” we emphasize that the IS/MND should consider incorporating a full solar power system into the Project design (p. 16). Until the feasibility of generating on-site renewable energy production is considered beyond the construction of a roof with solar readiness, the Project should not be approved.

Disclaimer

SWAPE has received limited discovery regarding this project. Additional information may become available in the future; thus, we retain the right to revise or amend this report when additional information becomes available. Our professional services have been performed using that degree of care and skill ordinarily exercised, under similar circumstances, by reputable environmental consultants practicing in this or similar localities at the time of service. No other warranty, expressed or implied, is made as to the scope of work, work methodologies and protocols, site conditions, analytical testing results, and findings presented. This report reflects efforts which were limited to information that was reasonably accessible at the time of the work, and may contain informational gaps, inconsistencies, or

**Geologic and Hydrogeologic Characterization
Investigation and Remediation Strategies
Litigation Support and Testifying Expert
Industrial Stormwater Compliance
CEQA Review**

Education:

M.S. Degree, Geology, California State University Los Angeles, Los Angeles, CA, 1984.

B.A. Degree, Geology, Humboldt State University, Arcata, CA, 1982.

Professional Certifications:

California Professional Geologist

California Certified Hydrogeologist

Qualified SWPPP Developer and Practitioner

Professional Experience:

Matt has 30 years of experience in environmental policy, contaminant assessment and remediation, stormwater compliance, and CEQA review. He spent nine years with the U.S. EPA in the RCRA and Superfund programs and served as EPA's Senior Science Policy Advisor in the Western Regional Office where he identified emerging threats to groundwater from perchlorate and MTBE. While with EPA, Matt also served as a Senior Hydrogeologist in the oversight of the assessment of seven major military facilities undergoing base closure. He led numerous enforcement actions under provisions of the Resource Conservation and Recovery Act (RCRA) and directed efforts to improve hydrogeologic characterization and water quality monitoring. For the past 15 years, as a founding partner with SWAPE, Matt has developed extensive client relationships and has managed complex projects that include consultation as an expert witness and a regulatory specialist, and a manager of projects ranging from industrial stormwater compliance to CEQA review of impacts from hazardous waste, air quality and greenhouse gas emissions.

Positions Matt has held include:

- Founding Partner, Soil/Water/Air Protection Enterprise (SWAPE) (2003 – present);
- Geology Instructor, Golden West College, 2010 – 2014, 2017;
- Senior Environmental Analyst, Komex H2O Science, Inc. (2000 -- 2003);

- Executive Director, Orange Coast Watch (2001 – 2004);
- Senior Science Policy Advisor and Hydrogeologist, U.S. Environmental Protection Agency (1989–1998);
- Hydrogeologist, National Park Service, Water Resources Division (1998 – 2000);
- Adjunct Faculty Member, San Francisco State University, Department of Geosciences (1993 – 1998);
- Instructor, College of Marin, Department of Science (1990 – 1995);
- Geologist, U.S. Forest Service (1986 – 1998); and
- Geologist, Dames & Moore (1984 – 1986).

Senior Regulatory and Litigation Support Analyst:

With SWAPE, Matt’s responsibilities have included:

- Lead analyst and testifying expert in the review of over 300 environmental impact reports and negative declarations since 2003 under CEQA that identify significant issues with regard to hazardous waste, water resources, water quality, air quality, greenhouse gas emissions, and geologic hazards. Make recommendations for additional mitigation measures to lead agencies at the local and county level to include additional characterization of health risks and implementation of protective measures to reduce worker exposure to hazards from toxins and Valley Fever.
- Stormwater analysis, sampling and best management practice evaluation at more than 100 industrial facilities.
- Expert witness on numerous cases including, for example, perfluorooctanoic acid (PFOA) contamination of groundwater, MTBE litigation, air toxins at hazards at a school, CERCLA compliance in assessment and remediation, and industrial stormwater contamination.
- Technical assistance and litigation support for vapor intrusion concerns.
- Lead analyst and testifying expert in the review of environmental issues in license applications for large solar power plants before the California Energy Commission.
- Manager of a project to evaluate numerous formerly used military sites in the western U.S.
- Manager of a comprehensive evaluation of potential sources of perchlorate contamination in Southern California drinking water wells.
- Manager and designated expert for litigation support under provisions of Proposition 65 in the review of releases of gasoline to sources drinking water at major refineries and hundreds of gas stations throughout California.

With Komex H2O Science Inc., Matt’s duties included the following:

- Senior author of a report on the extent of perchlorate contamination that was used in testimony by the former U.S. EPA Administrator and General Counsel.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of MTBE use, research, and regulation.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of perchlorate use, research, and regulation.
- Senior researcher in a study that estimates nationwide costs for MTBE remediation and drinking water treatment, results of which were published in newspapers nationwide and in testimony against provisions of an energy bill that would limit liability for oil companies.
- Research to support litigation to restore drinking water supplies that have been contaminated by MTBE in California and New York.

- Expert witness testimony in a case of oil production-related contamination in Mississippi.
- Lead author for a multi-volume remedial investigation report for an operating school in Los Angeles that met strict regulatory requirements and rigorous deadlines.
- Development of strategic approaches for cleanup of contaminated sites in consultation with clients and regulators.

Executive Director:

As Executive Director with Orange Coast Watch, Matt led efforts to restore water quality at Orange County beaches from multiple sources of contamination including urban runoff and the discharge of wastewater. In reporting to a Board of Directors that included representatives from leading Orange County universities and businesses, Matt prepared issue papers in the areas of treatment and disinfection of wastewater and control of the discharge of grease to sewer systems. Matt actively participated in the development of countywide water quality permits for the control of urban runoff and permits for the discharge of wastewater. Matt worked with other nonprofits to protect and restore water quality, including Surfrider, Natural Resources Defense Council and Orange County CoastKeeper as well as with business institutions including the Orange County Business Council.

Hydrogeology:

As a Senior Hydrogeologist with the U.S. Environmental Protection Agency, Matt led investigations to characterize and cleanup closing military bases, including Mare Island Naval Shipyard, Hunters Point Naval Shipyard, Treasure Island Naval Station, Alameda Naval Station, Moffett Field, Mather Army Airfield, and Sacramento Army Depot. Specific activities were as follows:

- Led efforts to model groundwater flow and contaminant transport, ensured adequacy of monitoring networks, and assessed cleanup alternatives for contaminated sediment, soil, and groundwater.
- Initiated a regional program for evaluation of groundwater sampling practices and laboratory analysis at military bases.
- Identified emerging issues, wrote technical guidance, and assisted in policy and regulation development through work on four national U.S. EPA workgroups, including the Superfund Groundwater Technical Forum and the Federal Facilities Forum.

At the request of the State of Hawaii, Matt developed a methodology to determine the vulnerability of groundwater to contamination on the islands of Maui and Oahu. He used analytical models and a GIS to show zones of vulnerability, and the results were adopted and published by the State of Hawaii and County of Maui.

As a hydrogeologist with the EPA Groundwater Protection Section, Matt worked with provisions of the Safe Drinking Water Act and NEPA to prevent drinking water contamination. Specific activities included the following:

- Received an EPA Bronze Medal for his contribution to the development of national guidance for the protection of drinking water.
- Managed the Sole Source Aquifer Program and protected the drinking water of two communities through designation under the Safe Drinking Water Act. He prepared geologic reports, conducted

public hearings, and responded to public comments from residents who were very concerned about the impact of designation.

- Reviewed a number of Environmental Impact Statements for planned major developments, including large hazardous and solid waste disposal facilities, mine reclamation, and water transfer.

Matt served as a hydrogeologist with the RCRA Hazardous Waste program. Duties were as follows:

- Supervised the hydrogeologic investigation of hazardous waste sites to determine compliance with Subtitle C requirements.
- Reviewed and wrote "part B" permits for the disposal of hazardous waste.
- Conducted RCRA Corrective Action investigations of waste sites and led inspections that formed the basis for significant enforcement actions that were developed in close coordination with U.S. EPA legal counsel.
- Wrote contract specifications and supervised contractor's investigations of waste sites.

With the National Park Service, Matt directed service-wide investigations of contaminant sources to prevent degradation of water quality, including the following tasks:

- Applied pertinent laws and regulations including CERCLA, RCRA, NEPA, NRDA, and the Clean Water Act to control military, mining, and landfill contaminants.
- Conducted watershed-scale investigations of contaminants at parks, including Yellowstone and Olympic National Park.
- Identified high-levels of perchlorate in soil adjacent to a national park in New Mexico and advised park superintendent on appropriate response actions under CERCLA.
- Served as a Park Service representative on the Interagency Perchlorate Steering Committee, a national workgroup.
- Developed a program to conduct environmental compliance audits of all National Parks while serving on a national workgroup.
- Co-authored two papers on the potential for water contamination from the operation of personal watercraft and snowmobiles, these papers serving as the basis for the development of nationwide policy on the use of these vehicles in National Parks.
- Contributed to the Federal Multi-Agency Source Water Agreement under the Clean Water Action Plan.

Policy:

Served senior management as the Senior Science Policy Advisor with the U.S. Environmental Protection Agency, Region 9.

Activities included the following:

- Advised the Regional Administrator and senior management on emerging issues such as the potential for the gasoline additive MTBE and ammonium perchlorate to contaminate drinking water supplies.
- Shaped EPA's national response to these threats by serving on workgroups and by contributing to guidance, including the Office of Research and Development publication, *Oxygenates in Water: Critical Information and Research Needs*.
- Improved the technical training of EPA's scientific and engineering staff.
- Earned an EPA Bronze Medal for representing the region's 300 scientists and engineers in negotiations with the Administrator and senior management to better integrate scientific

principles into the policy-making process.

- Established national protocol for the peer review of scientific documents.

Geology:

With the U.S. Forest Service, Matt led investigations to determine hillslope stability of areas proposed for timber harvest in the central Oregon Coast Range. Specific activities were as follows:

- Mapped geology in the field, and used aerial photographic interpretation and mathematical models to determine slope stability.
- Coordinated his research with community members who were concerned with natural resource protection.
- Characterized the geology of an aquifer that serves as the sole source of drinking water for the city of Medford, Oregon.

As a consultant with Dames and Moore, Matt led geologic investigations of two contaminated sites (later listed on the Superfund NPL) in the Portland, Oregon, area and a large hazardous waste site in eastern Oregon. Duties included the following:

- Supervised year-long effort for soil and groundwater sampling.
- Conducted aquifer tests.
- Investigated active faults beneath sites proposed for hazardous waste disposal.

Teaching:

From 1990 to 1998, Matt taught at least one course per semester at the community college and university levels:

- At San Francisco State University, held an adjunct faculty position and taught courses in environmental geology, oceanography (lab and lecture), hydrogeology, and groundwater contamination.
- Served as a committee member for graduate and undergraduate students.
- Taught courses in environmental geology and oceanography at the College of Marin.

Matt is currently a part time geology instructor at Golden West College in Huntington Beach, California where he taught from 2010 to 2014 and in 2017.

Paul Rosenfeld, Ph.D.

Principal Environmental Chemist

Chemical Fate and Transport & Air Dispersion Modeling

Risk Assessment & Remediation Specialist

Education

Ph.D. Soil Chemistry, University of Washington, 1999. Dissertation on volatile organic compound filtration.

M.S. Environmental Science, U.C. Berkeley, 1995. Thesis on organic waste economics.

B.A. Environmental Studies, U.C. Santa Barbara, 1991. Focus on wastewater treatment.

Professional Experience

Dr. Rosenfeld has over 25 years of experience conducting environmental investigations and risk assessments for evaluating impacts to human health, property, and ecological receptors. His expertise focuses on the fate and transport of environmental contaminants, human health risk, exposure assessment, and ecological restoration. Dr. Rosenfeld has evaluated and modeled emissions from oil spills, landfills, boilers and incinerators, process stacks, storage tanks, confined animal feeding operations, industrial, military and agricultural sources, unconventional oil drilling operations, and locomotive and construction engines. His project experience ranges from monitoring and modeling of pollution sources to evaluating impacts of pollution on workers at industrial facilities and residents in surrounding communities. Dr. Rosenfeld has also successfully modeled exposure to contaminants distributed by water systems and via vapor intrusion.

Dr. Rosenfeld has investigated and designed remediation programs and risk assessments for contaminated sites containing lead, heavy metals, mold, bacteria, particulate matter, petroleum hydrocarbons, chlorinated solvents, pesticides, radioactive waste, dioxins and furans, semi- and volatile organic compounds, PCBs, PAHs, creosote, perchlorate, asbestos, per- and poly-fluoroalkyl substances (PFOA/PFOS), unusual polymers, fuel oxygenates (MTBE), among other pollutants. Dr. Rosenfeld also has experience evaluating greenhouse gas emissions from various projects and is an expert on the assessment of odors from industrial and agricultural sites, as well as the evaluation of odor nuisance impacts and technologies for abatement of odorous emissions. As a principal scientist at SWAPE, Dr. Rosenfeld directs air dispersion modeling and exposure assessments. He has served as an expert witness and testified about pollution sources causing nuisance and/or personal injury at sites and has testified as an expert witness on numerous cases involving exposure to soil, water and air contaminants from industrial, railroad, agricultural, and military sources.

Professional History:

Soil Water Air Protection Enterprise (SWAPE); 2003 to present; Principal and Founding Partner
UCLA School of Public Health; 2007 to 2011; Lecturer (Assistant Researcher)
UCLA School of Public Health; 2003 to 2006; Adjunct Professor
UCLA Environmental Science and Engineering Program; 2002-2004; Doctoral Intern Coordinator
UCLA Institute of the Environment, 2001-2002; Research Associate
Komex H₂O Science, 2001 to 2003; Senior Remediation Scientist
National Groundwater Association, 2002-2004; Lecturer
San Diego State University, 1999-2001; Adjunct Professor
Anteon Corp., San Diego, 2000-2001; Remediation Project Manager
Ogden (now Amec), San Diego, 2000-2000; Remediation Project Manager
Bechtel, San Diego, California, 1999 – 2000; Risk Assessor
King County, Seattle, 1996 – 1999; Scientist
James River Corp., Washington, 1995-96; Scientist
Big Creek Lumber, Davenport, California, 1995; Scientist
Plumas Corp., California and USFS, Tahoe 1993-1995; Scientist
Peace Corps and World Wildlife Fund, St. Kitts, West Indies, 1991-1993; Scientist

Teaching Experience:

UCLA Department of Environmental Health (Summer 2003 through 2010) Taught Environmental Health Science 100 to students, including undergrad, medical doctors, public health professionals and nurses. Course focused on the health effects of environmental contaminants.

National Ground Water Association, Successful Remediation Technologies. Custom Course in Sante Fe, New Mexico. May 21, 2002. Focused on fate and transport of fuel contaminants associated with underground storage tanks.

National Ground Water Association; Successful Remediation Technologies Course in Chicago Illinois. April 1, 2002. Focused on fate and transport of contaminants associated with Superfund and RCRA sites.

California Integrated Waste Management Board, April and May, 2001. Alternative Landfill Caps Seminar in San Diego, Ventura, and San Francisco. Focused on both prescriptive and innovative landfill cover design.

UCLA Department of Environmental Engineering, February 5, 2002. Seminar on Successful Remediation Technologies focusing on Groundwater Remediation.

University Of Washington, Soil Science Program, Teaching Assistant for several courses including: Soil Chemistry, Organic Soil Amendments, and Soil Stability.

U.C. Berkeley, Environmental Science Program Teaching Assistant for Environmental Science 10.

Academic Grants Awarded:

California Integrated Waste Management Board. \$41,000 grant awarded to UCLA Institute of the Environment. Goal: To investigate effect of high carbon wood ash on volatile organic emissions from compost. 2001.

Synagro Technologies, Corona California: \$10,000 grant awarded to San Diego State University. Goal: investigate effect of biosolids for restoration and remediation of degraded coastal sage soils. 2000.

King County, Department of Research and Technology, Washington State. \$100,000 grant awarded to University of Washington: Goal: To investigate odor emissions from biosolids application and the effect of polymers and ash on VOC emissions. 1998.

Northwest Biosolids Management Association, Washington State. \$20,000 grant awarded to investigate effect of polymers and ash on VOC emissions from biosolids. 1997.

James River Corporation, Oregon: \$10,000 grant was awarded to investigate the success of genetically engineered Poplar trees with resistance to round-up. 1996.

United State Forest Service, Tahoe National Forest: \$15,000 grant was awarded to investigating fire ecology of the Tahoe National Forest. 1995.

Kellogg Foundation, Washington D.C. \$500 grant was awarded to construct a large anaerobic digester on St. Kitts in West Indies. 1993

Deposition and/or Trial Testimony:

In the Superior Court of the State of California, County of San Bernardino
Billy Wildrick, Plaintiff vs. BNSF Railway Company
Case No. CIVDS1711810
Rosenfeld Deposition 10-17-2022

In the State Court of Bibb County, State of Georgia
Richard Hutcherson, Plaintiff vs Norfolk Southern Railway Company
Case No. 10-SCCV-092007
Rosenfeld Deposition 10-6-2022

In the Civil District Court of the Parish of Orleans, State of Louisiana
Millard Clark, Plaintiff vs. Dixie Carriers, Inc. et al.
Case No. 2020-03891
Rosenfeld Deposition 9-15-2022

In The Circuit Court of Livingston County, State of Missouri, Circuit Civil Division
Shirley Ralls, Plaintiff vs. Canadian Pacific Railway and Soo Line Railroad
Case No. 18-LV-CC0020
Rosenfeld Deposition 9-7-2022

In The Circuit Court of the 13th Judicial Circuit Court, Hillsborough County, Florida Civil Division
Jonny C. Daniels, Plaintiff vs. CSX Transportation Inc.
Case No. 20-CA-5502
Rosenfeld Deposition 9-1-2022

In The Circuit Court of St. Louis County, State of Missouri
Kieth Luke et. al. Plaintiff vs. Monsanto Company et. al.
Case No. 19SL-CC03191
Rosenfeld Deposition 8-25-2022

In The Circuit Court of the 13th Judicial Circuit Court, Hillsborough County, Florida Civil Division
Jeffery S. Lamotte, Plaintiff vs. CSX Transportation Inc.
Case No. NO. 20-CA-0049
Rosenfeld Deposition 8-22-2022

Subject: RE: NOTICE OF CEQA POSTING: Public Review Draft MND: 550 Piercy Road Industrial Development Project

You don't often get email from j2nf@pge.com. [Learn why this is important](#)

[External Email]

Classification: Public

Hello Tina,

I wanted to notify you that PG&E has been working with the applicant on the design of this project around existing PG&E gas transmission lines, as well as relocating other PG&E facilities. I do not have any comments provide in relation to the CEQA posting. I hope this email is sufficient for your purposes. If not, please reach out to me and let me know what other correspondence or documentation I can provide.

D-1

Thank you,

Justin Newell | Land Agent | Land Rights Records

Classification: Public

Dear Tina Garg,

Thank you for submitting the 550 Piercy Road plans. The PG&E Plan Review Team is currently reviewing the information provided. Should this project have the potential to interfere with PG&E's facilities, we intend to respond to you with project specific comments. Attached is some general information when working near PG&E facilities that must be adhered to when working near PG&E's facilities and land rights.

This email and attachment does not constitute PG&E's consent to use any portion of PG&E's land rights for any purpose not previously conveyed. If there are subsequent modifications made to your design, we ask that you resubmit the plans to the email address listed below.

If you have any questions regarding our response, please contact the PG&E Plan Review Team at pgeplanreview@pge.com.

Thank you,

Pacific Gas and Electric Company

PUBLIC REVIEW DRAFT MND: 550 PIERCY RD INDUSTRIAL PROJECT (H22-015)

Post Date: 06/08/2023

550 Piercy Rd Industrial Development Project

FILE NOs: H22-015, ER22-089, T22-015

PROJECT DESCRIPTION

The project application is for a Site Development Permit and Vesting Tentative Map to allow the construction of two industrial buildings on a 28.9-acre single vacant parcel located at 550 Piercy Road in San José, California. The total square footage of the proposed industrial buildings would be 430,000 square feet, with 257,149 square feet for Building 1 and 172,851 square feet for Building 2. Additional improvements for site circulation, site access, drainage, and infrastructure are included in the proposed project.

LOCATION

The project site is located within the City limits of San José, in Santa Clara County, between Piercy Road to the north and Hellyer Avenue to the south. The project site consists of a single lot that is approximately 28.9-acres in size.

ASSESSOR'S PARCEL NUMBERS

678-08-043

PUBLIC CIRCULATION PERIOD

June 8, 2023, through June 28, 2023

The public is welcome to review and comment on the draft documents. Public comments must be submitted to the Environmental Project Manager no later than 5:00 p.m. on June 28, 2023.

Re: Comments on Initial Study/Mitigated Negative Declaration for 550 Piercy Road Industrial Development (File Nos. H22-015, ER22-089, T22-015) in the City of San José

Dear Ms. Garg and Director Burton:

On behalf of Silicon Valley Residents for Responsible Development (“Silicon Valley Residents”), we submit these comments on the Initial Study and Mitigated Negative Declaration (collectively, “MND”)¹ prepared pursuant to the California Environmental Quality Act (“CEQA”)² by the City of San José (“City”) for the 550 Piercy Road Industrial Development Project (File Nos. H22-015, ER22-089, T22-015) (“Project”), proposed by HUSPRF INVESTOR SPV I LP (“Applicant”).

E-1

¹ City of San José, *Initial Study / Mitigated Negative Declaration for 550 Piercy Road Industrial Development (File Nos. H22-015, ER22-089, T22-015)* (June 2023).

² Pub. Res. Code § 21000, *et seq.*; 14 C.C.R. §§ 15000, *et seq.*

The Project requests a Site Development Permit and Vesting Tentative Map to allow the construction of two industrial buildings on a 28.9-acre single parcel located at 550 Piercy Road in San José, California (Assessor’s Parcel Number (“APN”) 678-08-043).³ The total square footage of the proposed industrial buildings would be 430,000 square feet, with 257,149 square feet for Building 1 and 172,851 square feet for Building 2.⁴ The total square footage includes approximately 30,000 square feet of ground floor office and 13,985 square feet of mezzanine office, as well as other site improvements common amenity areas, internal roadways for site circulation, stormwater treatment areas, and landscaping.⁵

The Project includes eighty-four (84) loading docks (forty-six (46) for Building 1 and thirty-eight (38) for Building 2), 347 automotive parking stalls (including twelve (12) accessible parking spaces, 140 electric vehicle capable parking spaces, thirty-six (36) spaces with Electric Vehicle Supply Equipment (“EVSE”) and eight (8) clean air spaces), twenty-eight (28) motorcycle stalls, thirty-six (36) bicycle spaces (ten (10) long-term spaces and twenty six (26) short-term spaces), and eighty (80) trailer parking stalls.⁶ Access to the proposed development would be provided via four (4) access driveways, two (2) connecting to Piercy Road, and two (2) connecting to Hellyer Avenue.⁷ The exact usage of the proposed buildings is yet to be determined, but would likely be utilized for industrial distribution, manufacturing, and/or research & development activities.⁸ The Project site would also be subdivided into two lots, one for each of the proposed buildings.⁹ The site is designated Industrial Park in the Envision 2040 San José General Plan and IP Industrial Park in the Zoning Ordinance.¹⁰

We prepared these comments with the assistance of biological resources expert, Dr. Shawn Smallwood, and noise expert, Jack Meighan. Dr. Smallwood’s technical comments and curriculum vitae are attached hereto as Exhibit A.¹¹ Mr. Meighan’s technical comments and curriculum vitae are attached hereto as Exhibit

↑
E-2
Con't

The MND fails as an informational document under CEQA due to improperly piecemealed review of this Project and the adjacent industrial development at 644-675 Piercy Road, an incomplete environmental setting, and lack of substantial evidence to support the determination that the Project's significant impacts would be mitigated to less than significant levels, as asserted in the MND. First, the MND violates CEQA by improperly segmenting the environmental review of this Project from the 644-675 Piercy Road project, a 216,644-square foot distribution center building proposed by the same applicant on an adjacent site. Second, the MND fails to adequately describe the environmental setting against which the Project's impacts on biological resources are to be measured. The environmental setting in the MND is deficient in failing to adequately disclose the existing habitat on the Project site as well as the presence or likelihood of occurrence of special-status species, including the threatened California tiger salamander ("CTS").

There is also substantial evidence supporting a fair argument that the Project will have potentially significant environmental impacts on biological resources, noise, hazards, energy resources, and due to land use policy inconsistencies, that are not fully mitigated by the measures proposed in the MND. Comments by Dr. Smallwood provide substantial evidence supporting a fair argument that the Project will have significant impacts on biological resources due to habitat loss, restrictions on wildlife movement, wildlife injuries and mortality from Project-related traffic, and potentially significant cumulative impacts. Dr. Smallwood's comments also provide substantial evidence that the City's proposed mitigation measures will not reduce the Project's significant impacts on the American badger, raptors and other migratory birds, and the Western burrowing owl to less-than-significant levels.

E-3

Mr. Meighan's comments provide substantial evidence supporting a fair argument that the Project's noise impacts may be significant and are not fully mitigated by the measures proposed in the MND. First, Mr. Meighan comments that the analysis of the Project's construction noise impacts may be underestimated pursuant to the Federal Transit Administration's ("FTA") Transit Noise and

E-4
↓

¹² Jack Meighan, *Comments on the Initial Study/Mitigated Negative Declaration* ("Exhibit B") (hereinafter "Meighan Comments").

¹³ Silicon Valley Residents reserves the right to supplement these comments, and to file further comments at any and all future proceedings and hearings related to the Project. Gov. Code § 65009(b); Pub. Res. Code § 21177(a); *Bakersfield Citizens for Local Control v. Bakersfield* (2004) 124 Cal.App.4th 1184, 1199-1203; *see also Galante Vineyards v. Monterey Water Dist.* (1997) 60 Cal.App.4th 1109, 1120-1121.

Vibration Impact Assessment Manual relied upon in the MND. Second, Mr. Meighan explains in his comments that the Project’s operational noise impacts are unsupported given that the MND does not provide a comparison of ambient noise levels to Project noise levels, which is necessary information to determine if the Project would increase noise levels over the stated threshold. Finally, Mr. Meighan’s comments demonstrate on the basis of substantial evidence that the noise source data in the MND is unsupported.

↑
E-4
Con't

Additionally, a fair argument can be made that the Project may cause significant impacts from hazards requiring the preparation of an Environmental Impact Report (“EIR”). The Phase II Environmental Site Assessment (“ESA”) documented exceedances of Tier 1 environmental screening levels (“ESLs”) for toxic chemicals DDD, DDE, DDT, and chlordane.¹⁴ Despite these exceedances, neither the Phase II ESA nor the MND evaluates whether potential disturbance of this contamination during construction activities would “[c]reate a significant hazard to the *public*...through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment,” as required by CEQA.¹⁵ The MND also does not provide substantial evidence to support the conclusion that the Project would have a less than significant impact with respect to the wasteful, inefficient, or unnecessary consumption of energy resources. As supported by evidence in these comments, there is a fair argument that the Project may have significant energy impacts that are not mitigated and must be evaluated in an EIR. For example, although the Project includes a solar ready roof for the proposed buildings, the MND does not evaluate whether any renewable energy systems could be incorporated into the Project, which violates CEQA’s requirements. Furthermore, the MND fails to analyze the Project’s inconsistency with General Plan requirements limiting construction to certain hours.

E-5

Based on the substantial evidence presented herein and attached in Dr. Clark and Mr. Smith’s expert comments, the Project will have potentially significant impacts that the MND either mischaracterizes, underestimates, or fails to identify. The MND therefore fails to comply with CEQA due to improperly piecemealed review, inadequate description of the environmental setting, deficient environmental impact analysis, and insufficient mitigation measures. We respectfully request that further environmental analysis is completed in an EIR to ensure the Project’s impacts are disclosed, analyzed, and mitigated to the maximum extent feasible.

E-6
↓

¹⁴ MND, Appendix F-2 at 4-5.
¹⁵ MND at 106.

Lastly, for the reasons stated herein, the findings cannot be made to approve the Project's Site Development Permit pursuant to section 20.100.630 in the City's Municipal Code. The findings to approve the Project's Vesting Tentative Map also cannot be made pursuant to the Subdivision Map Act.

Cont

I. STATEMENT OF INTEREST

Silicon Valley Residents is an unincorporated association of individuals and labor organizations that may be adversely affected by the potential public and worker health and safety hazards, and the environmental and public service impacts of the Project. Residents includes San José residents, the International Brotherhood of Electrical Workers Local 332, Plumbers & Steamfitters Local 393, Sheet Metal Workers Local 104, Sprinkler Fitters Local 483 and the District Council of Ironworkers, along with their members, their families, and other individuals who live and work in the City of San José and in Silicon Valley.

Individual members of Silicon Valley Residents live, work, recreate, and raise their families in the City and in the surrounding communities. Accordingly, they would be directly affected by the Project's environmental and health and safety impacts. Individual members may also work on the Project itself. They will be first in line to be exposed to any health and safety hazards that exist on site.

E-7

In addition, Silicon Valley Residents has an interest in enforcing environmental laws that encourage sustainable development and ensure a safe working environment for its members. Environmentally detrimental projects can jeopardize future jobs by making it more difficult and more expensive for businesses and industries to expand in the region, and by making the area less desirable for new businesses and new residents. Indeed, continued environmental degradation can, and has, caused construction moratoriums and other restrictions on growth that, in turn, reduce future employment opportunities.

II. LEGAL BACKGROUND

CEQA requires that lead agencies analyze any project with potentially significant environmental impacts in an EIR.¹⁶ The purpose of the EIR "is to inform the public and its responsible officials of the environmental consequences of their decisions *before* they are made. Thus, the EIR 'protects not only the environment, but also informed self-government.'"¹⁷ The EIR has been described "as an

E-8
↓

¹⁶ See Pub. Res Code § 21000; 14 C.C.R. § 15002.

¹⁷ *Citizens of Goleta Valley v. Bd. of Supervisors* (1990) 52 Cal.3d 553, 564 [internal citations omitted].

environmental ‘alarm bell’ whose purpose it is to alert the public and its responsible officials to environmental changes before they have reached ecological points of no return.”¹⁸

CEQA’s purpose and goals must be met through the preparation of an EIR, except in certain limited circumstances. CEQA contains a strong presumption in favor of requiring a lead agency to prepare an EIR. This presumption is reflected in the “fair argument” standard. Under that standard, a lead agency “shall” prepare an EIR whenever substantial evidence in the whole record before the agency supports a fair argument that a project may have a significant effect on the environment.¹⁹

In contrast, a mitigated negative declaration may be prepared only when, after preparing an initial study, a lead agency determines that a project may have a significant effect on the environment, but:

(1) revisions in the project plans or proposals made by, or agreed to by, the applicant before the proposed negative declaration and initial study are released for public review **would avoid the effects or mitigate the effects to a point where clearly no significant effect on the environment would occur**, and (2) there is **no substantial evidence** in light of the whole record before the public agency that the project, as revised, **may** have a significant effect on the environment.²⁰

Courts have held that “[i]f no EIR has been prepared for a nonexempt project, but substantial evidence in the record supports a fair argument that the project may result in significant adverse impacts, the proper remedy is to order preparation of an EIR.”²¹ The fair argument standard creates a “low threshold” favoring environmental review through an EIR, rather than through issuance of a negative

¹⁸ *County of Inyo v. Yorty* (1973) 32 Cal.App.3d 795, 810.

¹⁹ Pub. Res. Code §§ 21080(d); 21082.2(d); 14 C.C.R. §§ 15002(k)(3), 15064(f)(1), (h)(1); *Laurel Heights Improvement Assn. v. Regents of the Univ. of Cal.* (1993) 6 Cal.4th 1112, 1123; *Stanislaus Audubon Society, Inc. v. County of Stanislaus* (1995) 33 Cal.App.4th 144, 150-151; *Quail Botanical Gardens Found., Inc. v. City of Encinitas* (1994) 29 Cal.App.4th 1597, 1601-1602.

²⁰ Pub. Res. Code § 21064.5 (emphasis added).

²¹ See, e.g., *Communities for a Better Environment v. South Coast Air Quality Management Dist.* (2010) 48 Cal.4th 310, 319-320.

declaration.²² An agency’s decision not to require an EIR can be upheld only when there is no credible evidence to the contrary.²³

“Substantial evidence” required to support a fair argument is defined as “enough relevant information and reasonable inferences from this information that a fair argument can be made to support a conclusion, even though other conclusions might also be reached.”²⁴

According to the CEQA Guidelines, when determining whether an EIR is required, the lead agency is required to apply the principles set forth in Section 15064, subdivision (g):

[I]n marginal cases where it is not clear whether there is substantial evidence that a project may have a significant effect on the environment, the lead agency shall be guided by the following principle: If there is disagreement among expert opinion supported by facts over the significance of an effect on the environment, the Lead Agency shall treat the effect as significant and shall prepare an EIR.²⁵

Furthermore, CEQA documents, including EIRs and MNDs, must mitigate significant impacts through measures that are “fully enforceable through permit conditions, agreements, or other measures.”²⁶ Deferring formulation of mitigation measures to post-approval studies is generally impermissible.²⁷ If identification of specific mitigation measures is impractical until a later stage in the Project, specific performance criteria must be articulated and further approvals must be made contingent upon meeting these performance criteria.²⁸ Courts have held that simply requiring a project applicant to obtain a future report and then comply with the report’s recommendations is insufficient to meet the standard for properly deferred mitigation.²⁹

²² *Citizens Action to Serve All Students v. Thornley* (1990) 222 Cal.App.3d 748, 754 [internal citations omitted].

²³ *Sierra Club v. County of Sonoma* (1992) 6 Cal.App.4th 1307, 1318; *see also Friends of B Street v. City of Hayward* (1980) 106 Cal.App.3d 988, 1002 (“If there was substantial evidence that the proposed project might have a significant environmental impact, evidence to the contrary is not sufficient to support a decision to dispense with preparation of an EIR and adopt a negative declaration, because it could be ‘fairly argued’ that the project might have a significant environmental impact”).

²⁴ 14 C.C.R. § 15384(a).

²⁵ *Id.* at § 15064(g).

²⁶ Pub. Res. Code §21081.6(b).

²⁸ *Id.*

²⁹ *Id.*

With respect to this Project, the MND fails to satisfy the basic purposes of CEQA. The MND fails to adequately disclose, investigate, and analyze the Project’s potentially significant impacts during construction and operation, and fails to provide substantial evidence to conclude that impacts will be mitigated to a less than significant level. Because the MND lacks basic information regarding the Project’s potentially significant impacts, the MND’s conclusion that the Project will have a less than significant impact on the environment is unsupported.³⁰ The City fails to provide the relevant data to support its finding of no significant impacts, and substantial evidence shows that the Project may result in potentially significant impacts. Therefore, a fair argument can be made that the Project may cause significant impacts requiring the preparation of an EIR.

↑
E-8
Con't

III. THE MND VIOLATES CEQA BY PIECEMEALING ENVIRONMENTAL REVIEW OF THE “WHOLE OF THE ACTION”

A project under CEQA means the “whole of an action which has the potential for resulting in either a direct physical change in the environment, or reasonably foreseeable indirect physical change in the environment.”³¹ CEQA prohibits segmenting the review of the significant environmental impacts of a project.³² CEQA mandates “that ‘environmental considerations do not become submerged by chopping a large project into many little ones—each with a minimal potential impact on the environment—which cumulatively may have disastrous consequences.’”³³ Public agencies must construe the project broadly to capture the whole of the action and its environmental impacts.³⁴

Before undertaking a project, the lead agency must assess the environmental impacts of all reasonably foreseeable phases of a project and a public agency may not segment a large project into two or more smaller projects in order to mask serious environmental consequences.³⁵ As the Court of Appeals stated, “[t]he CEQA process is intended to be a careful examination, fully open to the public, of the environmental consequences of a given project, covering the entire project, from start to finish.”³⁶ “[A]n EIR must include a [sic] analysis of the environmental

effects of future expansion or other action if: (1) it is a reasonably foreseeable consequence of the initial project; and (2) the future expansion or action will be significant in that it will likely change the scope or nature of the initial project or its environmental effects.”³⁷

The Applicant for this Project is also currently applying for a Site Development Permit to construct a 216,244 square foot distribution center building on the adjacent 15.92-gross acre site located at 644-675 Piercy Road (APNs 678-08-045 and -055).³⁸ Both projects propose substantially similar industrial uses,³⁹ are located on adjacent lots, and are proposed by the same applicant, yet the projects are being processed by the City separately and the corresponding environmental review is likewise disjointed. CEQA requires that consideration be given to the whole of the action, which should include the reasonably foreseeable project located at 644-675 Piercy Road.

As to the first inquiry in the *Laurel Heights* test, the project at 644-675 Piercy Road is imminent and reasonably foreseeable given that the applicant has applied for a Site Development Permit from the City (H22-035) and the City is performing environmental review pursuant to CEQA (ER22-219). “These specific, pending plans distinguish cases rejecting piecemealing claims on the ground the future actions were too speculative.”⁴⁰

As to the second part of the *Laurel Heights* test, the project located at 644-675 Piercy Road proposes to construct 216,244 square feet of industrial uses, thus increasing the square footage of industrial uses on the two project sites from 430,000 square feet to 646,244 square feet. The projects collectively will add more truck trips to the Project area than either project individually, increasing impacts on traffic, air pollution, and public health, and causing increased noise levels. The MND also states that “construction [of the two projects] could occur simultaneously,” which would likely change the scope and significance of the Project’s impacts during construction.⁴¹ The City therefore acknowledges that the

failed to analyze the impacts associated with an proposed pipeline was inadequate and violated CEQA).

644-675 Piercy Road project “will likely change the scope or nature of the initial project or its environmental effects.”⁴²

↑ E-10
Con't

The MND inconsistently analyzes some, but not all, of the impacts of the two projects as cumulative impacts, resulting in a skewed description of the two project components and of the severity of their combined impacts. For example, the MND analyzes the cumulative impacts of TAC emissions from construction of the two projects,⁴³ but not for biological impacts. The MND determines that the Project’s impacts on biological resources will be significant and proposed mitigation measures to reduce these impacts.⁴⁴ However, the MND does not evaluate the cumulative impacts on biological resources from both projects and also does not assess whether the mitigation measures are sufficient to reduce the impacts on biological resources from this Project in addition to the project located at 644-675 Piercy Road. The MND’s inconsistent treatment of the 644-675 Piercy Road project results in piecemealed review of the majority of project impacts.

E-11

The court in *Banning Ranch Conservancy v. City of Newport Beach* explained that the inquiry in *Laurel Heights* is not just whether the project may make reasonably foreseeable changes to the scope and nature of the project, but whether “it is a reasonably foreseeable *consequence* of the initial project.”⁴⁵ There, the court evaluated whether the Newport Banning Ranch development project and the Sunset Ridge Park Project were separate actions.⁴⁶ The court focused on the fact that the projects had different proponents, the projects “serve[d] different purposes,” the park project would go forward regardless of any development on Banning Ranch, “and importantly, [that] the City’s general plan call[ed] for construction of Bluff Road” regardless of whether the site would be annexed for the development project or not.⁴⁷

E-12

As applied here, the projects at 550 Piercy Road and 644-675 Piercy Road have the same applicant and the projects’ purposes are both industrial. The project at 644-675 Piercy Road will involve distribution activities and although this Project’s specific uses are yet to be determined, potential uses may include industrial distribution, manufacturing, and/or research and development

⁴⁷ *Id.* at 1226.

activities.⁴⁸ Unlike in *Banning Ranch*, there is no requirement in the City’s General Plan or other planning policies requiring the construction of one project regardless of the other’s development. Moreover, the City fails to provide substantial evidence demonstrating that the projects could be implemented independently of each other.

↑
E-12
Con't

Therefore, the MND fails to fully disclose, analyze, and mitigate the full scope of the Project’s potentially significant impacts given that the project located at 644-675 Piercy Road has been improperly segmented from this CEQA review.⁴⁹ The City must prepare an EIR to fully disclose, analyze, and mitigate the impacts of the current Project and the project located at 644-675 Piercy Road.

IV. THE MND FAILS TO PROVIDE AN ADEQUATE ENVIRONMENTAL SETTING

The MND fails to adequately describe the environmental setting against which the Project’s environmental impacts are to be measured for several critical aspects of the Project. This contravenes the fundamental purpose of the environmental review process, which is to determine whether there is a potentially substantial, adverse change compared to the existing setting.⁵⁰ The environmental setting is “a description of the physical environmental conditions in the vicinity of the project,” and “will normally constitute the baseline physical conditions by which a lead agency determines whether an impact is significant.”⁵¹ The purpose of establishing an accurate baseline is “to give the public and decision makers the most accurate and understandable picture practically possible of the project’s likely near-term and long-term impacts.”⁵²

↓
E-13

The environmental setting in the MND is deficient because the discussion omits critical information about existing habitat on the Project site and the presence or likelihood of occurrence of special-status species. Absent an adequate environmental setting analysis, the MND is inadequate as a matter of law for

⁴⁸ City of San José, *Community Meeting Notice*, available at: <https://www.sanjoseca.gov/home/showpublisheddocument/93460/638088737169930000>; MND at 137.

failing to provide a baseline against which to measure project impacts. An EIR must be prepared that complies with CEQA’s requirements.

↑
E-13
Con't

A. The Environmental Setting Fails to Identify Existing Habitat on the Project Site

The environmental setting set forth in the MND is informed by the Biological Resources Memorandum in Appendix B completed by Denise Duffy & Associates, Inc.⁵³ The Biological Resources Memorandum concludes that the Project site consists of annual grassland (25.7 acres) and developed/ruderal (3.1 acres) habitat types.⁵⁴ While no sensitive habitats on the Project site are disclosed in the Biological Resources Memorandum, the MND mentions that “adjacent parcels contain Coyote Creek riparian woodlands and serpentine bunchgrass grasslands.”⁵⁵ Dr. Smallwood determines that the MND and Biological Resources Memorandum fail to adequately identify the existing habitat types on the Project site.⁵⁶ Dr. Smallwood comments that the Biological Resources Memorandum’s characterization of annual grassland as “an abundant habitat type with a statewide distribution,” is incorrect. According to Dr. Smallwood, “[a]nnual grassland continues to be lost at a rapid rate in California, which is why so many of California’s special-status species are grassland-adapted. These species include burrowing owl, American badger, San Joaquin kit fox, grasshopper sparrow, white-tailed kite, northern harrier and many others.”⁵⁷

E-14

Dr. Smallwood also comments on inconsistencies in the MND’s “characterization of vegetation cover as part of the existing environmental setting.”⁵⁸ The Biological Resources Memorandum identifies 27.8 acres of annual grassland and 3.0 acres of ruderal/developed habitat on the Project site.⁵⁹ However, the MND identifies only 25.7 acres of annual grassland and 3.1 acres of ruderal/developed habitat.⁶⁰ Dr. Smallwood comments that these inconsistencies with the acreage and the “typing of the grassland” results in a “classification error” of habitat types that may also cause “additional error in the analysis of occurrence likelihoods of special-status species of plants and wildlife.”⁶¹ If the habitat types

and acreages are incorrect, the assignment of species to certain habitat types by association will likewise be inaccurate, as discussed in Dr. Smallwood's comments.⁶² The environmental setting in the MND for existing habitat types is therefore unsupported and incomplete.

↑
E-15
Cont

B. The Environmental Setting Inadequately Discloses Numerous Special-Status Species on the Project Site

The MND only identifies the following “special-status species that are known to or have been determined to have a moderate or high potential to occur within or immediately adjacent to the project site:” American badger, Western burrowing owl, grasshopper sparrow, and raptors and other protected avian species.⁶³ To identify the baseline for special-status species on the site, the Biological Resources Memorandum states that a reconnaissance-level habitat survey was completed on the Project site on June 24, 2022.⁶⁴ A focused survey for perennial and late spring-blooming special-status plant species was also performed.⁶⁵ Dr. Smallwood's comments and his Table 1 provide substantial evidence showing that the survey efforts do not comply with the California Fish and Wildlife Department's (“CDFW”) recommended survey protocols and guidance.⁶⁶ For example, Dr. Smallwood explains that the surveys “failed to achieve any of the burrowing owl survey guidelines (CDFW 2012),” and none of the “guidelines [were] followed for American badger, grasshopper sparrow, or any other special-status species of wildlife.”⁶⁷ Of the CDFW botanical survey guidelines, Dr. Smallwood determines that the surveys only complied with five (5) standards in the guidelines.⁶⁸ Dr. Smallwood explains that “determining presence of special-status species requires sufficient survey effort and adherence to survey protocols that have been formulated by experts on the species. And describing biological resources on and adjacent to the site must start with identifying those species actually detected at and adjacent to the site.”⁶⁹

E-16

After completing the survey on June 24, 2022, the Biological Resources Memorandum states that “suitable animal burrows were observed within the

project boundary,”⁷⁰ although Dr. Smallwood notes that “the species that excavated these burrows were not identified,” in the MND or Biological Resources Memorandum.⁷¹ Furthermore, no other plants or wildlife observed by biologists during the reconnaissance-level surveys on the Project site are reported in the Biological Resources Memorandum.⁷² Dr. Smallwood questions the legitimacy of the findings from the survey efforts based on his own experience conducting “hundreds of reconnaissance-level surveys throughout California.”⁷³ Moreover, Dr. Smallwood comments that the MND incorrectly asserts that “[t]he project is proposed in a semi-urbanized setting and has not been found to contain any native resident or wildlife species.”⁷⁴ This conclusion is not supported by the evidence in the Biological Resources Memorandum. Table 2 in Dr. Smallwood’s comments also demonstrates that “126 special-status species of wildlife are known to occur near enough to the site to warrant analysis of occurrence potential.”⁷⁵

E-17
Con't

In addition to the survey on June 24, 2022, the Biological Resources Memorandum states that “[p]ublished occurrence data within the project site and surrounding quadrangles were [also] evaluated....”⁷⁶ Dr. Smallwood discusses in his comments that “[b]y including in the species’ likelihood of occurrence analysis only species whose documented occurrences within the nearest [California Natural Diversity Database (“CNDDDB”)] quadrangles,” the analysis in the MND improperly “screen[s] out many special-status species from further consideration in their characterization of the wildlife community as a component of the baseline environmental setting.”⁷⁷ Dr. Smallwood explains that “CNDDDB is not designed to support absence determinations or to screen out species from characterization of a site’s wildlife community.”⁷⁸ He recommends that this review also include information from “eBird and iNaturalist, which are useful species occurrence databases that are also readily available.”⁷⁹

E-18

Dr. Smallwood assesses the special-status species that are known to or have been determined to have a moderate or high potential to occur within or

immediately adjacent to the Project site using eBird and iNaturalist.⁸⁰ His review identifies “126 special-status species of wildlife [that] are known to occur near enough to the site to warrant analysis of occurrence potential (Table 2). Of these 126 species, 38 (30%) have been documented within 1.5 miles of the site (‘Very close’), another 29 (23%) within 1.5 and 4 miles (‘Nearby’), and another 52 (41%) within 4 to 30 miles (‘In region’). More than half (53%) of the species in Table 2 have been reportedly seen within 4 miles of the project site.”⁸¹ Based on this substantial evidence, Dr. Smallwood concludes that “[t]he site therefore carries the potential for supporting many special-status species of wildlife based on proximity of recorded occurrences.”⁸²

The MND on the other hand only identifies twenty-five (25) of the special-status species listed in Dr. Smallwood’s comments (a mere 19.8%), and the MND finds that a only two (2) of those species have moderate occurrence likelihood.⁸³ Dr. Smallwood explains that “[t]he IS/MND determines occurrence potential to be low for 13 of the species, unlikely for 8 species, and none for 2 species. Of the 10 species assigned unlikely to no potential, 2 have been documented within 1.5 miles of the site, 5 have been documented within 1.5 and 4 miles of the site, and 2 have been documented within 4 and 30 miles of the site.”⁸⁴ Dr. Smallwood comments that “the occurrence potentials the IS/MND assigns to special-status species fail to comport with documented occurrences in eBird and iNaturalist,” and are therefore unsupported by substantial evidence.⁸⁵

For the grasshopper sparrow specifically, Dr. Smallwood concurs with the Biological Resources Memorandum’s conclusion that since this species was found to be “located approximately 3.8 miles southeast of the project site,” “this species has a moderate potential to occur within the project site.”⁸⁶ Despite adopting a standard for the grasshopper sparrow that deems “an occurrence record within 4 miles of the project site as indicative of a moderate occurrence likelihood on the project site,” this standard is not applied uniformly for other species, as discussed in Dr. Smallwood’s comments.⁸⁷ For example, Dr. Smallwood points out that “in the case of tricolored blackbird, which was documented 0.87 miles from the site (eBird), the distance standard did not apply, as the IS/MND determines the species does not occur on the project site. Similarly, the IS/MND does not apply its distance standard

to western pond turtle (0.11 miles, iNaturalist), California tiger salamander (1 mile, CNDDDB), golden eagle (0.14 miles), Cooper’s hawk (0.14 miles), northern harrier (0.14 miles), white-tailed kite (immediately adjacent), and Swainson’s hawk (1.82 miles).”⁸⁸

↑
E-19

C. The MND Fails to Provide Sufficient Baseline Information on California Tiger Salamander

The MND fails to provide a complete and accurate description of the Project’s environmental setting related to CTS and thus, the MND’s assessment of impacts on CTS is inadequate. CTS are listed as threatened both federally and at the state level.⁸⁹ The species’ habitat is “[a]nnual grassland and grassy understory of valley-foothill hardwood habitats in central and northern California. [CTS] [n]eed underground refuges and vernal pools or other seasonal water sources.”⁹⁰ The Biological Resources Memorandum determines that CTS “is unlikely to utilize the project site as a habitat corridor due to the adjacent interstate highway that separates the project site and Coyote Creek.”⁹¹ To the contrary, Dr. Smallwood’s comments provide substantial evidence that CTS may occur on the Project site.⁹² Dr. Smallwood comments that CTS “habitat is in grassland-wetland complexes where the wetlands consist of ponds that are not connected to any flowing water such as in Coyote Creek. [CTS] breed in vernal pools, small ponds, livestock stock ponds, and rain pools, and they spend about 95% of their lives within the burrows of ground squirrels and pocket gophers in grasslands up to 1.37 miles from their breeding pools (Orloff 2011).”⁹³ Utilizing Google Earth imagery, Dr. Smallwood identifies “potential breeding ponds 0.37 miles and 0.87 miles upslope from the project site,” which fall within the range of 1.37 miles that the species may travel from breeding pools to burrows in grasslands.⁹⁴

E-20

The presence of CTS on or around the Project site is not adequately analyzed as part of the environmental setting of the Project. Therefore, the corresponding impact analysis in the MND is inadequate. An EIR must be prepared with an updated environmental setting with respect to CTS to satisfy CEQA.

V. AN EIR IS REQUIRED BECAUSE THERE IS SUBSTANTIAL EVIDENCE SUPPORTING A FAIR ARGUMENT THAT THE PROJECT MAY HAVE SIGNIFICANT IMPACTS ON BIOLOGICAL RESOURCES

An MND is improper, and an EIR must be prepared, whenever it can be fairly argued on the basis of substantial evidence that the project may have a significant environmental impact.⁹⁵ “[S]ignificant effect on the environment” is defined as “a substantial, or potentially substantial, adverse change in the environment.”⁹⁶ An effect on the environment need not be “momentous” to meet the CEQA test for significance; it is enough that the impacts are “not trivial.”⁹⁷ Substantial evidence, for purposes of the fair argument standard, includes “fact, a reasonable assumption predicated upon fact, or *expert opinion* supported by fact.”⁹⁸

Moreover, the failure to provide information required by CEQA is a failure to proceed in the manner required by CEQA.⁹⁹ Challenges to an agency’s failure to proceed in the manner required by CEQA, such as the failure to address a subject required to be covered in an MND or to disclose information about a project’s environmental effects or alternatives, are subject to a less deferential standard than challenges to an agency’s factual conclusions.¹⁰⁰ Even when the substantial evidence standard is applicable to agency decisions to certify an MND and approve a project, reviewing courts will not “uncritically rely on every study or analysis presented by a project proponent in support of its position. A clearly inadequate or unsupported study is entitled to no judicial deference.”¹⁰¹

Comments by Dr. Smallwood provide substantial evidence supporting a fair argument that the Project will have significant impacts on biological resources due to habitat loss, restrictions on wildlife movement, wildlife injuries and mortality from Project-related traffic, and potentially significant cumulative impacts. Dr. Smallwood’s comments also provide substantial evidence demonstrating that the City’s proposed mitigation measures will not reduce the Project’s significant

impacts on the American badger, raptors and other migratory birds, and the Western burrowing owl to less-than-significant levels. For the reasons below, an EIR must be prepared to further evaluate and mitigate potentially significant impacts on biological resources.

↑
E-21
Con't

A. Substantial Evidence in Dr. Smallwood’s Comments Supports a Fair Argument that the Project’s Impacts on Habitat Loss are Potentially Significant

The MND concludes that the Project would have significant impacts on the American badger, active nests of nesting raptors or other migratory birds, and the Western burrowing owl.¹⁰² With the implementation of mitigation measures, the MND concludes that “the project’s impact to nesting birds and raptors, as well as western burrowing owls, would be less than significant.”¹⁰³ However, Dr. Smallwood states that the MND and Biological Resources Memorandum improperly fail to evaluate the potentially significant impacts of habitat loss from habitat fragmentation, which he concludes “poses serious problems to wildlife in the region.”¹⁰⁴ Dr. Smallwood explains that “[h]abitat fragmentation and habitat loss have been recognized as the most likely leading causes of a documented 29% decline in overall bird abundance across North America over the last 48 years (Rosenberg et al. 2019). Habitat loss not only results in the immediate numerical decline of wildlife, but it also results in permanent loss of productive capacity.”¹⁰⁵

↓
E-22

For nesting birds, Dr. Smallwood estimates the loss of productive capacity from this Project based on studies in grassland-wetland-woodland complexes.¹⁰⁶ As supported by these studies, Dr. Smallwood calculates that the Project may result in “a loss of 330 bird nests,” which “would qualify as a potentially significant project impact,...”¹⁰⁷ In addition to the loss of nest sites, Dr. Smallwood comments that “as nest substrate is removed and foraging grounds graded in preparation for impervious surfaces,” “[t]he reproductive capacity of the site would be lost.”¹⁰⁸ Dr. Smallwood estimates that the lost capacity of both breeders and annual fledgling production based on the study cited to in his comments would result in a total of approximately “1,089 birds per year denied to California.”¹⁰⁹ As supported by

¹⁰² MND at 60-64.

¹⁰³ *Id.* at 64. This discussion in the MND does not also conclude that with the proposed mitigation, the Project’s significant impacts on the American badger would also be less-than-significant.

¹⁰⁴ Smallwood Comments at 15.

¹⁰⁵ *Id.*

¹⁰⁶ *Id.* at 16.

¹⁰⁷ *Id.*

¹⁰⁸ *Id.*

¹⁰⁹ *Id.*

substantial evidence in his comments, Dr. Smallwood concludes that the impacts to the productive capacity of birds from habitat loss would be a potentially significant impact that is not disclosed or analyzed in the MND.¹¹⁰

For the foregoing reasons, the MND has not disclosed, analyzed, or mitigated the potentially significant impacts on species from habitat loss and habitat fragmentation, as demonstrated in Dr. Smallwood’s comments, and therefore the MND fails to comply with CEQA’s requirements. Further environmental analysis in an EIR must be conducted to ensure the Project’s impacts are disclosed, analyzed, and mitigated to the maximum extent feasible.

B. Substantial Evidence in Dr. Smallwood’s Comments Supports a Fair Argument that the Project’s Impacts on Wildlife Movement are Potentially Significant

The MND concludes, absent substantial evidence, that the Project’s impacts on wildlife movement would be less than significant.¹¹¹ The MND reasons that “[t]he project is proposed in a semi-urbanized setting and has not been found to contain any native resident or wildlife species. The southwestern adjacent parcel contains Coyote Creek riparian woodlands approximately 380 feet southwest of the Hellyer Avenue border of the project site. The northwestern adjacent parcel contains serpentine bunchgrass grasslands, located approximately 510 feet northwest of the Piercy Road border of the project site. There are no streams, creeks or wetlands located on the project site, which is largely dominated by nonnative annual forbs and dirt roads.”¹¹² The MND fails to support this less-than-significant determination on the basis of substantial evidence, as discussed in Dr. Smallwood’s comments.¹¹³ According to Dr. Smallwood, the MND does not support its determination with survey data, “sampling regime,” or “program of observation to quantitatively or to even qualitatively assess wildlife movement patterns.”¹¹⁴

Dr. Smallwood’s comments, however, provide substantial evidence supporting a fair argument that the Project may have significant impacts on wildlife movement.¹¹⁵ As detailed in Dr. Smallwood’s comments, “the project site does support wildlife, ... and its nearness to Coyote Creek’s riparian woodlands and serpentine bunchgrass grasslands should increase rather than diminish the

E-22
Cont'

E-23

likelihood that wildlife use the site to move through the region.”¹¹⁶ This is because “[i]t is well documented that migratory wildlife tend to channel their movements along natural stream corridors and valley features,” as stated in Dr. Smallwood’s comments.¹¹⁷

Thus, substantial evidence supports a fair argument that the Project will have a potentially significant and unmitigated impact on wildlife movement. An EIR must be prepared which adequately analyzes and mitigates these impacts.

C. Substantial Evidence in Dr. Smallwood’s Comments Supports a Fair Argument that the Project’s Impacts on Species from Traffic Are Potentially Significant

The MND entirely ignores the Project’s potentially significant impacts on wildlife mortality and injuries from Project-generated traffic. Dr. Smallwood’s comments provide substantial evidence supporting a fair argument that the Project may significantly impact wildlife due to increased rates of mortality and injuries from new traffic generated by the Project.¹¹⁸ Dr. Smallwood explains that “Project-generated traffic would endanger wildlife that must, for various reasons, cross roads used by the project’s traffic [], including along roads far from the project footprint.”¹¹⁹ Dr. Smallwood’s comments provide substantial evidence of significant wildlife mortality rates resulting from vehicle collisions; “Vehicle collisions have accounted for the deaths of many thousands of amphibian, reptile, mammal, bird, and arthropod fauna, and the impacts have often been found to be significant at the population level (Forman et al. 2003). Across North America, traffic impacts have taken devastating tolls on wildlife (Forman et al. 2003). In Canada, 3,562 birds were estimated killed per 100 km of road per year (Bishop and Brogan 2013), and the US estimate of avian mortality on roads is 2,200 to 8,405 deaths per 100 km per year, or 89 million to 340 million total per year (Loss et al. 2014). Local impacts can be more intense than nationally.”¹²⁰

Dr. Smallwood references a study of traffic-related wildlife mortality conducted along 2.5 miles of Vasco Road, which is approximately thirty-seven (37) miles from the Project site.¹²¹ According to Dr. Smallwood, “[f]atality searches in this study found 1,275 carcasses of 49 species of mammals, birds, amphibians and

reptiles over 15 months of searches (Mendelsohn et al. 2009).”¹²² Dr. Smallwood notes that the study does not “adjust[] for the proportion of fatalities that were not found due to scavenger removal and searcher error.”¹²³ However, he identifies a “study next to Vasco Road (Brown et al. 2016)” that utilized “adjustment factors for carcass persistence...” and estimates that “the adjusted total number of fatalities [would be] 12,187 animals killed by traffic on the road.”¹²⁴

As supported by these studies, Dr. Smallwood concludes that “[t]he IS/MND fails to analyze whether increased traffic generated by the project site would similarly result in local impacts on wildlife,” and “[w]ithout this analysis, the IS/MND lacks evidence to support a finding of no significant impact.”¹²⁵ Moreover, based on the substantial evidence provided in Dr. Smallwood’s comments, he determines that “there is evidence of a potentially significant impact from the Project’s traffic-related wildlife mortality and this analysis should be set forth in an EIR.”¹²⁶

Dr. Smallwood also quantitatively analyzes Project-generated traffic impacts to wildlife using a rate of fatalities per VMT.¹²⁷ Based on a 2009 study, Dr. Smallwood estimates that roughly 22,242,187.5 vehicle miles per 12,187 wildlife fatalities or 1,825 vehicle miles per fatality may occur, which would result in approximately 5,844 vertebrate wildlife fatalities per year for the Project.¹²⁸ Dr. Smallwood discounts this figure by half given “that some of the landscape around the project site and through which project-generated traffic would pass through, ... would be lower than estimated at the Vasco Road study site.”¹²⁹ Ultimately, Dr. Smallwood concludes that “the project-generated traffic would cause 2,922 wildlife fatalities per year,” and “this number would qualify as a substantial and highly significant project impact.”¹³⁰ He explains that “[m]itigation measures to improve wildlife safety along roads are available and are feasible [], and [these measures] need exploration for their suitability with the proposed project in an EIR.”¹³¹

Therefore, there is substantial evidence supporting a fair argument that impacts to biological resources from Project-generated traffic may be significant and

D. Substantial Evidence in Dr. Smallwood’s Comments Supports a Fair Argument that the Project’s Cumulative Impacts on Biological Resources Are Potentially Significant

The MND’s analysis improperly omits an assessment of the Project’s potentially significant cumulative impacts on biological resources. The discussion in the MND’s Mandatory Findings of Significance concludes that the cumulative impacts would nevertheless be less than significant given the proposed mitigation measures and adherence to biological resources protection ordinances.¹³² The conclusion in the MND is not supported by substantial evidence and, as stated in Dr. Smallwood’s comments, “[t]he IS/MND lacks the evidence necessary to demonstrate that the project’s incremental effect and the effects of other projects is not significant, especially with regards to the American badger, Western burrowing owl, and nesting birds.”¹³³

If the MND included an analysis of the Project’s potentially significant cumulative impacts on biological resources, it would have needed to evaluate the 644/675 Piercy Road project. This project adjoins the site to the east, consists of one single-story industrial building, and would involve 24-hour truck trips accessing Hellyer Avenue as well as mechanical equipment noise. As stated by Dr. Smallwood, “[g]iven that the two projects are on adjoining sites, the projects likely host the same or similar biological resources [] and may result in cumulatively considerable impacts on these resources that must be studied in an EIR.”¹³⁴

E-25

Dr. Smallwood concludes that the adjacent “project would likely contribute substantially to cumulative impacts, and that these impacts are likely to be significant,” based on the evidence demonstrating that there are numerous “special-status species that potentially occur on and around the project site, such as burrowing owl, [CTS], white-tailed kite, northern harrier and American badger;” “the rapid decline of burrowing owls despite the [Santa Clara Valley Habitat Conservation Plan (“SCVHP”)]”; and “the rapid urbanization and industrialization of Santa Clara Valley,....”¹³⁵ Dr. Smallwood emphasizes the dire state of the Western burrowing owl, which “is rapidly heading towards extirpation in the Bay

¹³² MND at 191.

area.”¹³⁶ According to Dr. Smallwood, “[i]n 2022, there were only 17 known breeding pairs in Santa Clara County (Talon Ecological Research Group 2023). The latest burrowing owl monitoring report stated, ‘the goal of establishing a stable, then increasing owl population is not being met’ (Talon Ecological Research Group 2023). In fact, the burrowing owl population in the SCVHP study area has declined about 80% since 2006 (Talon Ecological Research Group 2023).”¹³⁷

↑
E-25
Con't

Thus, as supported by substantial evidence in Dr. Smallwood’s comments, the Project’s cumulative impacts on species may be significant and must be evaluated in an EIR.¹³⁸

E. Substantial Evidence in Dr. Smallwood’s Comments Supports a Fair Argument that the Project’s Impacts on Biological Resources Are Potentially Significant Because the Mitigation Measures Are Deficient

The MND sets forth mitigation measures to reduce the Project’s significant impacts on the American badger (MM BIO-1a through MM BIO-1b); nesting raptors and other migratory birds, like the grasshopper sparrow (MM BIO-2); and the Western burrowing owl (MM BIO-3a through MM BIO-3c).¹³⁹ However, Dr. Smallwood’s comments identify major deficiencies with these measures and stated that additional mitigation measures are feasible to reduce the Project’s significant impacts on the species.¹⁴⁰

E-26

With regards to MM BIO-1a through MM BIO-1b addressing the Project’s significant impacts to the American badger, Dr. Smallwood comments that the MND lacks specific performance criteria to ensure that the proposed Employee Education Program for the construction crew would effectively mitigate the Project’s significant impacts.¹⁴¹ These specific measures could include, but are not limited to, “candidate access routes to the project site, detailed measures to ensure the safety of the biological monitor, descriptions of special-status species that would be provided to the construction crew, the specific measures that would be incorporated into the construction effort to minimize impacts, and the procedures that would be implemented to manage situations in which members of special-status species are encountered during grading or construction.”¹⁴²

¹⁴⁰ Smallwood Comments at 20-26.

¹⁴¹ *Id.* at 21.

¹⁴² *Id.*

Dr. Smallwood also explains that the requirement for focused pre-construction surveys for badger dens under MM BIO-1b must be preceded by detection surveys, which have not yet been completed.¹⁴³ According to Dr. Smallwood, “[p]reconstruction surveys are not designed to detect the target species with anywhere close to the same likelihood as are protocol-level detection surveys, and so are intended as follow-up surveys to detection surveys, the latter of which are needed to inform the CEQA impacts analysis and identification of feasible mitigation measures to reduce the project’s significant impacts on this species.”¹⁴⁴ Moreover, if potential dens are observed, MM BIO-1b provides for specific scenarios based on the judgment of a qualified biologist.¹⁴⁵ Dr. Smallwood expresses serious concerns with the lack of objective criteria under MM BIO-1b and the failure of the measure “to identify guidance or criteria [] on the appropriate buffer, such as whether and how it should be adjusted based on the type of construction activity underway nearby.”¹⁴⁶ Dr. Smallwood thus concludes that “[t]his measure will not reduce the project’s significant impacts on the species and must be evaluated in an EIR.”¹⁴⁷

E-27
Con't

Regarding MM BIO-2 for the Project’s significant impacts on nesting birds and raptors, Dr. Smallwood notes that “[t]he avian breeding season recognized by the California Department of Fish and Wildlife is now 1 February through 15 September,” not February 1 through August 31 as identified in MM BIO-2.¹⁴⁸ Additionally, Dr. Smallwood concludes that while the “measure might prevent the direct destruction of nests,” “this measure would fail to avoid the takings of 28.9 acres of avian breeding habitat, thereby denying Californians another 1,089 birds per year (see earlier comment under Habitat Loss).”¹⁴⁹

E-28

The measure for pre-construction surveys for nesting birds under MM BIO-2 to “minimize or reduce potential impacts to nesting birds to less-than-significant is [also] unsubstantiated,” according to Dr. Smallwood.¹⁵⁰ Dr. Smallwood’s comments detail his own experience surveying for grassland nesters, during which he has “found that the nests of grassland birds are the most difficult to locate.”¹⁵¹ He explains that “[g]round nesters, which are the types of birds that occur on the project site, are highly adept at concealing their nests both physically and

¹⁵¹ *Id.* at 22.

behaviorally. Based on [Dr. Smallwood’s] experience, it is highly likely that preconstruction survey would fail to find any of the nests of ground-nesting birds that truly occur on the project site.”¹⁵² Finally, if an active nest is found, MM BIO-2 states that “the ornithologist, in consultation with [CDFW] (only if needed), shall determine the extent of a construction free buffer zone to be established around the nest,”¹⁵³ Dr. Smallwood comments that this requirement “lacks objective criteria, and is unenforceable,” particularly since consultation with CDFW is “only if needed” and no criteria is established to determine when such consultation would be “needed.”¹⁵⁴

E-28
Con't

Finally, MM BIO-3a requires preconstruction surveys for burrowing owls in all suitable habitat areas.¹⁵⁵ However, Dr. Smallwood comments that “[p]reconstruction surveys are not designed to detect the target species with anywhere close to the same likelihood as are protocol-level detection surveys, and so are intended as follow-up surveys to detection surveys per CDFW (2012), the latter of which are needed to inform the impacts analysis and feasible mitigation measures.”¹⁵⁶ Since detection surveys have not yet been completed and MM BIO-3a does not follow CDFW burrowing owl protocols, Dr. Smallwood determines that this mitigation measure is deficient.¹⁵⁷

E-29

MM BIO-3b sets forth requirements based on the mitigation guidance in the SCVHCP.¹⁵⁸ Dr. Smallwood does not recommend that a Western burrowing owl mitigation plan “be based solely on guidance provided by the [SCVHCP],” because “[a]ccording to the latest burrowing owl monitoring report, ‘the goal of establishing a stable, then increasing owl population is not being met’ (Talon Ecological Research Group 2023). In fact, the burrowing owl population in the SCVHP study area has declined about 80% since 2006 (Talon Ecological Research Group 2023).”¹⁵⁹ Since “the SCVHP is clearly failing to meet its conservation objectives related to burrowing owls,” according to Dr. Smallwood, “[t]he SCVHP presently provides an unreliable framework for mitigating potential project impacts to burrowing owls.”¹⁶⁰ Dr. Smallwood also comments that “the excavation of burrowing owl burrows for the

purpose of passive relocation would not be consistent with the CDFW (2012) mitigation guidelines. In fact, CDFW (2012) warns that passive relocation can be interpreted as take.”¹⁶¹

↑ E-30
Con't

MM BIO-3c requires “the project applicant [to] establish and maintain the non-disturbance buffer zones throughout the construction period,” and “conduct training with construction personnel on the avoidance procedures, buffer zones, and protocols...”¹⁶² Dr. Smallwood comments that “[r]egardless of how the project would attempt to minimize impacts to burrowing owls breeding on or near the project site at the time of construction, burrowing owls would lose the most critically important asset needed for persistence, and that is their habitat. The IS/MND proposes no compensatory mitigation for habitat loss, which is a major deficiency of the IS/MND.”¹⁶³

E-31

Taken together, Dr. Smallwood’s comments provide substantial evidence supporting a fair argument that the mitigation measures proposed for the Project’s significant impacts on the American badger, raptors and other migratory birds, and the Western burrowing owl are insufficient to reduce the Project’s impacts to less-than-significant levels. Dr. Smallwood identifies the following feasible mitigation measures to reduce the Project’s significant impacts on biological resources:

- **Detection Surveys:** Dr. Smallwood comments that “[p]rotocol-level detection surveys are needed to (1) support negative findings of species when appropriate, (2) inform preconstruction surveys to improve their efficacy, (3) estimate project impacts, and (4) inform compensatory mitigation and other forms of mitigation. Detection survey protocols and guidelines are available from resource agencies for most special-status species. Otherwise, professional standards can be learned from the scientific literature and species’ experts. Survey protocols that need to be implemented include CDFW (2012) for burrowing owls. The guidelines call for multiple surveys throughout the breeding season.”¹⁶⁴
- **Detection Surveys for Bats:** Dr. Smallwood concludes on the basis of substantial evidence that “[m]ultiple special-status species of bats likely occur on and around the project site.”¹⁶⁵ As a result, he comments that “[a] qualified bat biologist should be tasked with completing protocol-level

E-32

¹⁶¹ *Id.*

¹⁶² MND at 64.

¹⁶³ Smallwood Comments at 25.

¹⁶⁴ *Id.* at 26.

¹⁶⁵ *Id.*

detection surveys for bats. It needs to be learned whether bats roost in the area and whether bats forage on site.”¹⁶⁶

- **Preconstruction surveys:** Dr. Smallwood states that “[c]ompletion of reports of the methods and outcomes of preconstruction surveys for nesting birds and other wildlife should be required. The reports should be made available to the public.”¹⁶⁷
- **Construction Monitoring:** Dr. Smallwood recommends in his comments that “two or more qualified biologists need to serve as construction monitors. They should have the authority to stop construction when construction poses a threat to wildlife, and they should have the authority to rectify situations that pose threats to wildlife. The events associated with construction monitoring, such as efforts to avoid impacts and findings of dead and injured wildlife, need to be summarized in a report that is subsequently made available to the public.”¹⁶⁸
- **Habitat Loss:** Dr. Smallwood’s comments provide substantial evidence to support that “compensatory mitigation would be warranted for habitat loss.” In his opinion, “[a]t least an equal area of land should be protected in perpetuity as close to the project site as possible, but a larger area is likely warranted to mitigate for the impacts to so many special-status species of wildlife as likely occur on the site. And additional compensatory mitigation should be linked to impacts identified in construction monitoring.”¹⁶⁹
- **Road Mortality:** Dr. Smallwood concludes that “[c]ompensatory mitigation is needed for the increased wildlife mortality that would be caused by the project-generated road traffic in the region.”¹⁷⁰ He recommends “that this mitigation can be directed toward funding research to identify fatality patterns and effective impact reduction measures such as reduced speed limits and wildlife under-crossings or overcrossings of particularly dangerous road segments. Compensatory mitigation can also be provided in the form of donations to wildlife rehabilitation facilities....”¹⁷¹

E-32
Con't

¹⁶⁶ *Id.*

¹⁶⁷ *Id.*

¹⁶⁸ *Id.*

¹⁶⁹ *Id.*

¹⁷⁰ *Id.*

¹⁷¹ *Id.*

- **Fund Wildlife Rehabilitation Facilities:** Dr. Smallwood states that “[c]ompensatory mitigation ought also to include funding contributions to wildlife rehabilitation facilities to cover the costs of injured animals that will be delivered to these facilities for care. Many animals would likely be injured by collisions with automobiles.”¹⁷²

In conclusion and based on the substantial evidence provided in Dr. Smallwood’s comments, there is a fair argument of potentially significant impacts on biological resources, and the mitigation measures proposed in the MND are insufficient to reduce these impacts to less-than-significant levels. Additional feasible mitigation measures are available to reduce these significant impacts, as identified in Dr. Smallwood’s comments.¹⁷³

VI. AN EIR IS REQUIRED BECAUSE THERE IS SUBSTANTIAL EVIDENCE SUPPORTING A FAIR ARGUMENT THAT THE PROJECT MAY HAVE SIGNIFICANT NOISE IMPACTS

The MND concludes that the Project would not have any significant impacts from noise levels during construction or operations and therefore no mitigation measures were required.¹⁷⁴ Mr. Meighan’s comments provide substantial evidence supporting a fair argument that the Project’s noise impacts may be significant. First, Mr. Meighan comments that the analysis of the Project’s construction noise do not comply with the FTA’s Transit Noise and Vibration Impact Assessment Manual, as referenced in the MND, and as a result, the Project’s impacts may be underestimated. Second, Mr. Meighan explains in his comments that the Project’s operational noise impacts are unsupported. Since the MND fails to disclose the ambient noise levels, the analysis is unable to provide a comparison of ambient noise levels to Project noise levels, which is necessary to determine if the Project would increase noise levels over the stated threshold. Finally, Mr. Meighan’s comments demonstrate, on the basis of substantial evidence, that the noise source data in the MND is unsupported. An EIR must be prepared that analyzes the potentially significant impacts on noise.

¹⁷² *Id.*

¹⁷³ *Id.*

¹⁷⁴ MND at 131-140.

↑
E-32
Con't

E-33

A. Substantial Evidence in Mr. Meighan’s Comments Supports a Fair Argument that the Project’s Impacts on Noise during Construction Activities Are Potentially Significant

The MND’s construction noise analysis “uses the noise limits established by the [FTA] to identify the potential for impacts due to substantial temporary construction noise. The FTA identifies construction noise limits in the Transit Noise and Vibration Impact Assessment Manual. During daytime hours, an exterior threshold of 80 dBA Leq shall be applied at residential land uses and 90 dBA Leq shall be applied at commercial and industrial land uses.”¹⁷⁵ Based on these thresholds, the MND concludes that “construction noise levels would not exceed the exterior threshold of 80 dBA Leq at residential land uses. The 90 dBA Leq threshold would not be exceeded at commercial land uses in the project vicinity during project construction.”¹⁷⁶

However, Mr. Meighan’s comments provide substantial evidence that the MND’s use of the FTA methodology to perform a “general assessment while incorporating usage factors significantly underestimates the potential impact of construction noise.”¹⁷⁷ According to Mr. Meighan, “usage factors are only utilized in the detailed assessment” in accordance with the FTA methodology and “using [a general assessment] with usage factors greatly underestimates noise,” as is the case here.¹⁷⁸ Mr. Meighan explains that “[u]sage factors are defined as the percentage of time a piece of construction equipment is used during an hour. After breaks, adjustments, coordination, many pieces of loud construction equipment are only used 20-40% of the time. When using these with a general assessment, it then reduces and underestimates the amount of time of sound exposure by 60-80%.”¹⁷⁹

Mr. Meighan provides an example to demonstrate how the MND may have underestimated the Project’s construction noise impacts.¹⁸⁰ He states that “if we consider the grading phase and use only the two loudest pieces of construction equipment (Excavator and Grader) with the proper usage factors at 70 feet, the predicted noise level is 84 dBA. This exceeds the provided threshold of 80 dBA, rendering the conclusion that ‘the temporary construction noise impact would be reduced to a less than significant level’ incorrect.”¹⁸¹ Therefore, as supported by

E-34

substantial evidence in Mr. Meighan’s comments, an EIR must be prepared that adequately evaluates the Project’s construction noise impacts.

↑
E-34
Con't

B. Mr. Meighan’s Comments Demonstrate that the MND Fails to Support the Less-Than-Significant Determination for the Project’s Operational Noise Impacts Because Ambient Noise Levels Are Undisclosed

The MND states that “[a]ccording to Policy EC-1.2 of the City’s General Plan, a significant permanent noise increase would occur if the project would increase noise levels at noise-sensitive receptors by 3 dBA DNL or more where ambient noise levels exceed the ‘normally acceptable’ noise level standard. Where ambient noise levels are at or below the ‘normally acceptable’ noise level standard, noise level increases of 5 dBA DNL or more would be considered significant.”¹⁸² The MND concludes that the Project’s operational noise levels, e.g., from traffic noise, mechanical equipment noise, parking lot noise, and noise from truck deliveries, would be less than significant based on this standard.¹⁸³

However, Mr. Meighan’s comments demonstrate that the City fails to support these less-than-significant determinations with substantial evidence because the MND does not disclose the ambient sound levels to allow for “a comparison [to] be made between predicted noise levels and measured ambient levels.”¹⁸⁴ For example, “in Table 14, the estimated future DNL is 61 dBA. Table 14 also states that this is 2 dB over the ambient levels. This implies an ambient level of 59 dBA, which is not included at all in the document, either in the discussion or in the ambient measurements.”¹⁸⁵ Mr. Meighan therefore concludes that “[c]onsidering that the threshold of significance is based on predicted noise from the project over the existing ambient, using a misrepresented level could underestimate any potential noise impact.”¹⁸⁶ As stated by Mr. Meighan in his comments, “an EIR must provide sound levels at each sensitive receiver and explicitly disclose each calculated level and criteria at each location to ensure that the impacts analysis clearly evaluates noise level increase over ambient levels.”¹⁸⁷

E-35

¹⁸² MND at 136.

¹⁸³ *Id.* at 136-38.

¹⁸⁴ Meighan Comments at 1.

¹⁸⁵ *Id.*

¹⁸⁶ *Id.* at 2.

¹⁸⁷ *Id.*

C. Mr. Meighan’s Comments Demonstrate on the Basis of Substantial Evidence that the Noise Source Data in the MND is Unsupported

Mr. Meighan explains that the MND provides noise levels for future operational sources, such as rooftop mechanical equipment, parking lot noise, truck engine noise, and truck back up alarms, without providing evidentiary support for the selected noise levels.¹⁸⁸ For example, according to Mr. Meighan, “a backup alarm can have an Lmax as high as 88 dBA at 50 feet, which exceeds the levels used in the report by ten decibels. If this value is used instead of the one provided in Table 12 for the West Industrial receiver, the resultant noise level would be 67 dBA at 570 feet, with a DNL of 66 dBA (assuming a Leq-DNL correction factor of 1, as seems to be used throughout the report). This represents levels 7 dBA over the assumed ambient of 59 dBA DNL (extrapolating from the West Industrial Receiver in Table 10), which would result in a potentially significant noise impact that was undisclosed in the MND.”¹⁸⁹ The MND is therefore deficient in failing to support the stated noise levels for future operational sources and, as such, the less-than-significant determination is unsupported.

E-36

VII. AN EIR IS REQUIRED BECAUSE THERE IS SUBSTANTIAL EVIDENCE SUPPORTING A FAIR ARGUMENT THAT THE PROJECT MAY HAVE SIGNIFICANT IMPACTS FROM HAZARDS

The MND states that a Phase I ESA was conducted in 2020 on the Project site and “determined that there was evidence of a single [Recognized Environmental Conditions (“RECs”)] in connection with the site...related to the historical agricultural use of the site, and previous soil samples testing positive for DDE.”¹⁹⁰ The Phase I ESA “recommend[ed] conducting additional soil sampling and laboratory analysis to test for DDE contamination...prior to development of the site.”¹⁹¹ A Phase II ESA was completed in December of 2021.¹⁹² Critical findings from the September 2021 sampling event include, but are not limited to:

E-37

- DDD concentrations were less than the commercial direct exposure [Environmental Screening Levels (“ESLs”)], however, the sample collected from location SS-9 at a depth of approximately the upper ½ foot exceeds the Tier 1 ESL (2.7 mg/kg).

¹⁸⁸ *Id.* at 3.

¹⁸⁹ *Id.*

¹⁹⁰ MND at 105.

¹⁹¹ *Id.*

¹⁹² MND, Appendix F-2.

- DDE concentrations were less than the commercial direct exposure ESL, however, 11 of 15 soil samples collected from the approximately upper ½ foot exceed the Tier 1 ESL (0.33 mg/kg).
- DDT concentrations were less than the commercial direct exposure ESL, however, the detected concentrations exceed the Tier 1 ESL (0.0011 mg/kg).
- Sample SS-6 collected from the approximately upper ½ foot detected a concentration of chlordane that exceeds the Tier 1 ESL (0.0085 mg/kg) but is less than the commercial direct exposure ESL (2.2 mg/kg).¹⁹³

The San Francisco Bay Regional Water Quality Control Board sets ESLs to “provide conservative screening levels for over 100 chemicals found at sites with contaminated soil and groundwater.”¹⁹⁴ ESLs “are intended to help expedite the identification and evaluation of potential environmental concerns at contaminated sites.”¹⁹⁵ Here, the Phase II ESA documents exceedances of Tier 1 ESLs for DDD, DDE, DDT, and chlordane.¹⁹⁶ Although the Phase II ESA concludes that the “soil does not appear significantly impacted by historical agricultural use,” neither the Phase II ESA nor the MND evaluates whether this contamination would “[c]reate a significant hazard to the *public*...through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment,” as required by CEQA.¹⁹⁷ Project construction will involve grading and excavation activities, which could result in disturbance of contaminated soil or groundwater. The omission of this analysis is therefore a major deficiency in violation of CEQA. Furthermore, the mitigation measure proposed in the MND for significant impacts from hazards is limited to the preparation of an Asbestos Dust Mitigation Plan.¹⁹⁸ This plan will not mitigate potentially significant impacts on workers and the general public from hazards created by disturbing soil contamination from historic agricultural operations.

Therefore, a fair argument can be made that the Project may cause significant impacts from hazards requiring the preparation of an EIR.

VIII. AN EIR IS REQUIRED BECAUSE THERE IS SUBSTANTIAL EVIDENCE SUPPORTING A FAIR ARGUMENT THAT THE PROJECT MAY HAVE SIGNIFICANT IMPACTS DUE TO THE WASTEFUL, INEFFICIENT, AND UNNECESSARY CONSUMPTION OF ENERGY

Appendix F to the CEQA Guidelines provides guidance on information that may be included in an analysis of a project’s energy use.¹⁹⁹ Appendix F states, “[t]he goal of conserving energy implies the wise and efficient use of energy. The means of achieving this goal include: (1) decreasing overall per capita energy consumption, (2) decreasing reliance on fossil fuels such as coal, natural gas and oil, and (3) increasing reliance on renewable energy sources.”²⁰⁰ Appendix F lists possible environmental impacts and mitigation measures for the lead agency to consider.²⁰¹ Environmental impacts may arise from such things as “[t]he project’s energy requirements and its energy use efficiencies;” the project’s effects on local and regional energy supplies, requirements for additional capacity, and peak and base period demands for electricity and other forms of energy; “[t]he degree to which the project complies with existing energy standards;” the project’s effects on energy resources; and “[t]he project’s projected transportation energy use requirements and its overall use of efficient transportation alternatives.”²⁰² If the project’s energy impacts are significant, Appendix F suggests types of mitigation measures which a lead agency may consider.²⁰³ These include, among others, “measures to reduce wasteful, inefficient and unnecessary consumption of energy during construction, operation, maintenance and/or removal[;]” and “[a]lternate fuels (particularly renewable ones) or energy systems.”²⁰⁴

Here, the MND’s analysis of the Project’s energy impacts is deficient for three reasons.²⁰⁵ First, the MND’s estimated annual energy use of the Project during operations in Table 8 states that “[a]ll project natural gas use was set to zero and assigned to electricity use in CalEEMod in accordance with Climate Smart San José.”²⁰⁶ Yet, in the preceding paragraph, the MND states, “[o]peration of the proposed project would consume energy, in the form of electricity **and natural gas**, primarily for building heating and cooling, lighting, cooking, and water heating.”²⁰⁷

²⁰⁶ *Id.* at 81.

²⁰⁷ *Id.* (emphasis added).

E-38

E-39

The MND must clearly state whether the Project would use natural gas during Project operations and, if so, must include the natural gas usage in the energy impacts analysis to accurately reflect the Project’s energy mix. The MND must also evaluate compliance with the City’s ordinance banning natural gas if the Project will in fact use natural gas during operations.

↑
E-39
Con't

Second, although the MND states that the “project [] includes a solar ready roof for each of the proposed buildings to facilitate future development of renewable energy on the site,” the MND does not consider whether any renewable energy systems could be incorporated into the Project, which violates CEQA’s requirements.²⁰⁸ The court in *League to Save Lake Tahoe Mountain etc. v. Cnty. of Placer* held that the EIR failed to adequately consider renewable energy features.²⁰⁹ The court reasoned that “[b]ecause the EIR did not address whether any renewable energy features could be incorporated into the project as part of determining whether the project’s impacts on energy resources were significant, it did not comply with CEQA’s procedural requirements, a prejudicial error.”²¹⁰ The court determined that CEQA required consideration of renewable energy features not only as mitigation measure if project had significant impact on energy resources, but also during initial analysis of whether project had a significant impact on energy resources.²¹¹

E-40

Here, there is no mention of on-site renewable energy systems to increase the Project’s reliance on renewable energy and decrease the Project’s reliance on fossil fuels, as intended by Appendix F. For the foregoing reasons, there is substantial evidence supporting a fair argument that the Project may have a significant impact due to the wasteful, inefficient, or unnecessary consumption of energy resources.

Finally, the MND states that “[t]he project would be enrolled in and receive energy from the [San José Clean Energy (“SJCE”)] program at the GreenSource level,” which only provides 60 percent greenhouse gas (“GHG”) emission-free electricity.²¹² However, the MND discloses that SJCE also offers its customers the opportunity to enroll in the TotalGreen program, which receives 100 percent GHG free electricity from entirely renewable energy sources.²¹³ The MND is deficient in failing to evaluate whether the Project could enroll in SJCE’s TotalGreen program to ensure 100 percent of the electricity is sources from renewable energy resources,

For the foregoing reasons, the MND does not provide substantial evidence to support the conclusion that the Project would have a less than significant impact with respect to the wasteful, inefficient, or unnecessary consumption of energy resources during Project construction or operation.²¹⁴ To the contrary, based on the substantial evidence provided herein, there is a fair argument that the Project may have significant energy impacts that are not mitigated and must be evaluated in an EIR.

E-42

IX. AN EIR MUST BE PREPARED BECAUSE THERE IS SUBSTANTIAL EVIDENCE SUPPORTING A FAIR ARGUMENT THAT THE PROJECT MAY HAVE SIGNIFICANT IMPACTS DUE TO LAND USE POLICY INCONSISTENCIES

Where a local or regional policy of general applicability, such as an ordinance, is adopted in order to avoid or mitigate environmental effects, a conflict with that policy constitutes a significant land use impact and, in itself, indicates a potentially significant impact on the environment.²¹⁵ Any inconsistencies between a proposed project and applicable plans must be discussed in the project's CEQA document.²¹⁶ A project's inconsistencies with local plans and policies also constitute significant impacts under CEQA.²¹⁷

Policy EC-1.7 of the City's General Plan requires all construction operations within the City to use "best available noise suppression devices and techniques and to limit construction hours near residential uses per the Municipal Code allowable hours, which are between the hours of 7:00 a.m. and 7:00 p.m. Monday through Friday when construction occurs within 500 feet of a residential land use."²¹⁸ Moreover, the MND explains that "Chapter 20.100.450 of the Municipal Code establishes allowable hours of construction within 500 feet of a residential unit between 7:00 AM and 7:00 PM Monday through Friday unless permission is

E-43

²¹⁸ MND at 131.

granted with a development permit or other planning approval. No construction activities are permitted on the weekends at sites within 500 feet of a residence.”²¹⁹

Here, the MND states that “[t]he [P]roject proposes extended construction hours, which would occur Monday through Saturday from 7 AM to 10 PM,” but “[t]o comply with Policy EC-1.7, no construction work would occur on Saturdays within 500 feet of residential uses.”²²⁰ As disclosed in the MND, standard permit conditions for the Project would include “[l]imit[ing] construction to the hours of 7:00 a.m. to 7:00 p.m. Monday through Friday for any on-site or off-site work within 500 feet of any residential unit.”²²¹ As written, this condition is insufficient to ensure compliance with Policy EC-1.7 of the City’s General Plan and Chapter 20.100.450 of the Municipal Code. The MND fails to disclose any criteria to ensure that construction can actually be limited within areas of 500 feet from residences between the hours of 7:00 pm to 10:00 pm Monday through Friday and from 7:00 am to 10:00 pm on Saturdays.

Single-family residences 400 feet north of the Project site are located along Piercy Road, which is an access route for construction trucks during the estimated 12 months of construction.²²² The MND fails to assess how, if at all, construction-related trucking activities along Piercy Road will cease during the hours of 7:00 pm to 10:00 pm Monday through Friday and from 7:00 am to 10:00 pm on Saturdays to comply with Policy EC-1.7 of the City’s General Plan and Chapter 20.100.450 of the Municipal Code. The MND also fails to disclose any monitoring requirement for this condition to ensure compliance, nor does the MND provide contact information that residents may use to complain about noise issues after the permitted hours.

Residents along Tennant Avenue²²³ raised concerns about the Project’s construction noise in an e-mail communication dated December 15, 2022, and requested that construction be limited to “reasonable daytime hours- Say 7.00 AM to 3,00 PM [sic] and night time construction work should not be permitted.”²²⁴

²¹⁹ *Id.* at 127.

²²⁰ *Id.*

²²¹ *Id.* at 135.

²²² MND at 40.

²²³ Although residential development by Tennant Avenue is approximately 845 feet from the Project site, courts have held that neighbors’ statements and testimony may constitute substantial evidence supporting a fair argument that a project may result in a significant unmitigated noise impact. *See Keep Our Mountains Quiet v. County of Santa Clara* (2015) 236 Cal.App.4th 714, 732–735 (an EIR is required if substantial evidence supports a fair argument that the Project may have significant unmitigated noise impacts, even if other evidence shows the Project will not generate noise in excess of the local agencies’ noise ordinance and general plan).

²²⁴ Email from Usha Chandra, resident, to Rina Shah, City of San José, and Tina Garg, City of San José (December 15, 2022)(“Exhibit C”).

CEQA case law is clear that public comments on matters within ordinary experience may constitute “substantial evidence.”²²⁵ Given public comments from local residents expressing concerns about the Project’s potentially significant construction noise impacts, additional measures are necessary to ensure that work within 500 feet of any residential unit does not occur on weekends and after 7:00 pm on weekdays.

The MND fails to analyze the Project’s inconsistency with Policy EC-1.7 of the City’s General Plan and Chapter 20.100.450 of the Municipal Code, which limit construction to certain hours within 500 feet of residences, as discussed above. An EIR must be prepared to adequately disclose and mitigate the potentially significant environmental impacts.

X. THE FINDINGS CANNOT BE MADE TO APPROVE THE SITE DEVELOPMENT PERMIT FOR THE PROJECT

To approve a Site Development Permit, the following findings must be made pursuant to the City’s Code of Ordinances:

- The site development permit, as approved, is consistent with and will further the policies of the general plan and applicable specific plans and area development policies.
- The site development permit, as approved, conforms with the zoning code and all other provisions of the San José Municipal Code applicable to the project.
- The site development permit, as approved, is consistent with applicable city council policies, or counterbalancing considerations justify the inconsistency.
- The interrelationship between the orientation, location, and elevations of proposed buildings and structures and other uses on-site are mutually compatible and aesthetically harmonious.

²²⁵ See *Pocket Protectors v. City of Sacramento* (2004) 124 Cal.App.4th 903, 937 (“As on other CEQA topics, the opinions of area residents, if based on direct observation, may be relevant as to aesthetic impact and may constitute substantial evidence in support of a fair argument; no special expertise is required on this topic”); *Citizens for Responsible & Open Government v. City of Grand Terrace* (2008) 160 Cal.App.4th 1323, 1340 (same regarding noise); *Protect Niles v. City of Fremont* (2018) 25 Cal.App.5th 1129, 1152 (“Residents’ personal observations of traffic conditions where they live and commute may constitute substantial evidence even if they contradict the conclusions of a professional traffic study. This is especially true where, as here, residents cite specific facts that call into question the underlying assumptions of a traffic study.”).

↑
E-43

E-44
↓

- The orientation, location and elevation of the proposed buildings and structures and other uses on the site are compatible with and are aesthetically harmonious with adjacent development or the character of the neighborhood.
- ***The environmental impacts of the project, including but not limited to noise, vibration, dust, drainage, erosion, storm water runoff, and odor which, even if insignificant for purposes of the California Environmental Quality Act (CEQA), will not have an unacceptable negative affect on adjacent property or properties.***
- Landscaping, irrigation systems, walls and fences, features to conceal outdoor activities, exterior heating, ventilating, plumbing, utility and trash facilities are sufficient to maintain or upgrade the appearance of the neighborhood.
- Traffic and pedestrian access are adequate.²²⁶

If “the information submitted by the applicant or presented at the public hearing fails to satisfactorily substantiate such findings,” the Site Development Permit application must be denied.²²⁷ Here, the Site Development Permit application must be denied because the finding cannot be made that the environmental impacts of the Project, including, but not limited to, noise, hazards, biological resources, and energy impacts, will not have an unacceptable negative affect on adjacent property or properties.²²⁸

Based on the substantial evidence set forth herein and in the attached expert comments, a fair argument can be made that the Project may have significant impacts on noise, biological resources, hazards, and energy impacts.²²⁹ For example, Mr. Meighan’s comments provide substantial evidence that the Project’s construction noise impacts may be significant, especially at adjacent properties.²³⁰ Mr. Meighan explains in his comments that “if we consider the grading phase and use only the two loudest pieces of construction equipment (Excavator and Grader) with the proper usage factors at 70 feet, the predicted noise level is 84 dBA. This exceeds the provided threshold of 80 dBA, rendering the conclusion that ‘the

²²⁶ City of San José Code of Ordinances § 20.100.630(A)(1)-(8) (emphasis added).

²²⁷ *Id.* at § 20.100.630(B).

²²⁸ *Id.* at § 20.100.630(A)(6).

²²⁹ See Smallwood Comments and Mr. Meighan Comments.

²³⁰ Meighan Comments at 2.

temporary construction noise impact would be reduced to a less than significant level' incorrect."²³¹

For the foregoing reasons, the findings to support approval of the Project's Site Development Permit cannot be made unless the City fully discloses and mitigates the Project's potentially significant impacts pursuant to CEQA, as required by the Municipal Code.

XI. THE FINDINGS MANDATED BY THE SUBDIVISION MAP ACT CANNOT BE MADE TO APPROVE THE PROJECT'S VESTING TENTATIVE MAP

The Project seeks approval of a Vesting Tentative Map (T22-015).²³² A vesting tentative map of any subdivision must be disapproved if any of the findings described in Section 66474 of the Subdivision Map Act are made.²³³ Specifically, a vesting tentative map must be denied if any of the following findings can be made: "(a) That the proposed map is not consistent with applicable general and specific plans as specified in Section 65451. (b) That the design or improvement of the proposed subdivision is not consistent with applicable general and specific plans. (c) That the site is not physically suitable for the type of development. (d) That the site is not physically suitable for the proposed density of development. (e) That the design of the subdivision or the proposed improvements are likely to cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat. (f) That the design of the subdivision or type of improvements is likely to cause serious public health problems."²³⁴

As a result of the Project's ongoing unmitigated significant impacts discussed above, the City lacks substantial evidence to support the findings required under the Subdivision Map Act to approve the Project's Vesting Tentative Map. In particular, a finding that the Project is not likely to cause substantial environmental damage would not be supported by substantial evidence for the reasons set forth above and in the expert comments attached hereto.

XII. CONCLUSION

For the reasons discussed above, the MND for the Project is wholly inadequate under CEQA. An EIR must be circulated to provide a legally adequate

²³¹ *Id.* at 2-3.

RE: 550 Piercy Road Industrial Development Project

Dear Mr. Burton,

I write to comment on the Initial Study/Mitigated Negative Declaration (“IS/MND”) prepared for the proposed 550 Piercy Road Industrial Development Project, which I understand would add two 52-foot-tall buildings totaling 430,000 square feet of floor space and an expansive parking area to 28.9 acres of what is currently annual grassland and wildlife habitat. The IS/MND characterizes the site of the proposed project as “vacant,” but I wish to comment on the wildlife that make use of the site.

My qualifications for preparing expert comments are the following. I hold a Ph.D. degree in Ecology from University of California at Davis, where I also worked as a post-graduate researcher in the Department of Agronomy and Range Sciences. My research has been on animal density and distribution, habitat selection, wildlife interactions with the anthrosphere, and conservation of rare and endangered species. I authored many papers on these and other topics. I served as Chair of the Conservation Affairs Committee for The Wildlife Society – Western Section. I am a member of The Wildlife Society and Raptor Research Foundation, and I’ve lectured part-time at California State University, Sacramento. I was Associate Editor of wildlife biology’s premier scientific journal, The Journal of Wildlife Management, as well as of Biological Conservation, and I was on the Editorial Board of Environmental Management. I have performed wildlife surveys in California for thirty-seven years. My CV is attached.

EXISTING ENVIRONMENTAL SETTING

The first step in analysis of potential project impacts to biological resources is to accurately characterize the existing environmental setting, including the biological species that use the site, their relative abundances, how they use the site, key ecological relationships, and known and ongoing threats to those species with special status. A reasonably accurate characterization of the environmental setting can provide the basis for determining whether the site holds habitat value to wildlife, as well as a baseline against which to analyze potential project impacts. For these reasons, characterization of the environmental setting, including the project’s site’s regional setting, is one of CEQA’s essential analytical steps. Methods to achieve this first step typically include (1) surveys of the site for biological resources, and (2) reviews of literature, databases and local experts for documented occurrences of special-status species. In the case of this project, these steps remain incomplete.

The environmental consultant, Denise Duffy & Associates (2023:1), set out “to determine if sensitive biological resources are present or have the potential to occur within and in the vicinity of the site. This report describes the existing biological resources within and adjacent to the project site, including any special-status species or sensitive habitats.” However, determining presence of special-status species requires sufficient survey effort and adherence to survey protocols that have been formulated by experts on the species. And describing biological resources on and adjacent to the site must start with identifying those species actually detected at and adjacent to the site. Denise Duffy & Associates (2023) fail to provide sufficient foundation for concluding which special-status species are present or absent from the project site.

The contextualization of the existing environmental setting is inaccurate and misleading. According to Denise Duffy & Associates (2023:13), “Annual grassland is an abundant habitat type with a statewide distribution.” This is simply not true. The vast majority of annual grassland has been destroyed by changes in hydrology and land use. Annual grassland continues to be lost at a rapid rate in California, which is why so many of California’s special-status species are grassland-adapted. These species include burrowing owl, American badger, San Joaquin kit fox, grasshopper sparrow, white-tailed kite, northern harrier and many others. The IS/MND’s characterization of the existing environmental setting cannot be accurate if it inaccurately characterizes the regional status of the principal vegetation cover of the project site.

There are also some inconsistencies in the characterization of vegetation cover as part of the existing environmental setting. According to Denise Duffy & Associates (2023:1), the site is “composed of annual grassland (27.8 acres) and ruderal/developed (3.0 acres) habitat.” But according to the IS/MND (p. 57), “The site is composed of annual grassland (25.7 acres) and developed/ruderal (3.1 acres) habitat types,” and the “...Santa Clara Valley HCP depicts land cover as defined in the Santa Clara Valley HCP. Land cover at the site consists of Grain, Row-crop, Hay and Pasture, Disked / Short-term Fallowed (28.3 acres) and Urban-Suburban (0.4 acres).” Hence, three acreages of grassland are reported for the site, and typing of the grassland varies. These inconsistencies point to a form of error that too often goes ignored, and that is classification error. Consulting biologists too often to map vegetation complexes as habitat types, but fail to follow up with ground-truthing of the vegetation typing and the accuracy of their boundaries. This type of error is compounded when consulting biologists assign species to the mapped habitat types by association, and without concern for the error in the associations and with the unrealistically hard boundaries that divide the mapped habitat types. Considering that the acreages and typing of grassland is inconsistent on the project site, I am concerned that there is additional error in the analysis of occurrence likelihoods of special-status species of plants and wildlife.

Environmental Setting informed by Field Surveys

A reconnaissance-level survey was reportedly completed on the project site. A biologist from Denise Duffy & Associates (2023:6) “conducted a survey ... to characterize site habitat features and to identify any special-status plant or wildlife species or suitable

habitat for these species within the site.” And “...to identify general habitat and potential sensitive habitat types, conducting an assessment of potential wetlands and other waters, conducting a reconnaissance-level habitat survey to identify any special-status wildlife species or suitable habitat for special-status plant and wildlife species occurring within the site, and conducting a focused survey for perennial and late spring-blooming special-status plant species.” This was a long list of objectives to have been pursued by a single biologist over an unknown time period on a single day. In short, this list of objectives was not achievable by one biologist on one day, and I do not believe that this list was truly pursued (see below).

A named biologist is reported to have walked over the site on 24 June 2022. However, critical methodological details are missing from the IS/MND, such as what time the biologist arrived to begin the survey and how long the survey lasted. These details would enable the public and decision-makers to assess the veracity of the survey findings. Not reporting these details is indefensible, and vastly diminishes the informational value of the IS/MND. The stated objectives for the survey could not have been achieved without reporting these details.

The IS/MND fails to report which species of plants and wildlife were observed by the biologist who performed the reconnaissance survey. The closest that Denise Duffy & Associates comes to reporting which species of wildlife were observed can be found in the following passage, “suitable animal burrows were observed within the project boundary” (p. 16), although the species that excavated these burrows were not identified. Nevertheless, this passage refutes the highly misleading claim made in the IS/MND (p. 65) that “The project is proposed in a semi-urbanized setting and has not been found to contain any native resident or wildlife species.” Although they do not report which species they observed, Denise Duffy & Associates (2023) does not report that their survey failed to detect any wildlife species.

I have completed hundreds of reconnaissance-level surveys throughout California. Never have I completed a survey without detecting any species of wildlife, not at annual grasslands, not at the most extreme desert environments, and not on paved parking lots. The number of wildlife species I detect is a logistic function of survey time, in which the most rapid rate of species detections occurs soonest after the survey begins, and diminishes as the survey continues (Figure 1). Even if Denise Duffy & Associates surveyed for only one minute, an explanation would be needed as to how no species were detected during a time period (1 minute) when I averaged nearly 2 species per survey (95% CI: 1.78–2.07 species). Had the biologist surveyed for only one hour, how is it that he detected no species of wildlife whereas over that time period I averaged 19.3 species (95% CI: 18.6–20.0 species)?

Figure 1. Mean and 95% confidence intervals (CI) of the predicted number of vertebrate wildlife species detected by each successive minute of elapsed survey time across 426 surveys at project sites throughout California. The model form is shown in the graph, where X represents minutes into the surveys, and a , b , and c are coefficients fitted by a combination of quadratic and simplex methods of estimation in Statistica.

Detection Surveys

According to Denise Duffy & Associates (2023:6), “The project site was evaluated for botanical resources following the applicable guidelines outlined in *Guidelines for Conducting and Reporting Botanical Inventories for Federally listed, Proposed and Candidate Plants* (U.S. Fish and Wildlife Service [Service], 2000), *Protocols for Surveying and Evaluating Impacts to Special-Status Native Plant Populations and Natural Communities* (California Department of Fish and Wildlife [CDFW], 2018), and California Native Plant Society (CNPS) *Botanical Survey Guidelines* (CNPS, 2001).” In fact, Denise Duffy & Associates (2023) followed almost none of the CDFW (2018) botanical survey guidelines; I determined they followed only 5 of them (Table 1). Most concerning is that Denise Duffy & Associates (2023) achieved only one of the five Survey Design standards of CDFW (2018). Denise Duffy & Associates (2023) reports having followed the CDFW (2018) guidelines, but they did not.

Table 1. Assessment of whether reconnaissance-level surveys for plants achieved the standards in CDFW's (2018) recommended survey protocol.

Standard in CDFW (2018)	Assessment of surveys completed	Was the standard met?
Qualifications		
Knowledge of plant taxonomy and natural community ecology	No information provided	No
Familiarity with plants of the region, including special status plants	No information provided	No
Familiarity with natural communities of region, including sensitive natural communities	No information provided	No
Experience with the CNDDDB, BIOS, and Survey of California Vegetation Classification and Mapping Standards	No information provided	No
Experience conducting floristic botanical field surveys as described in this document, or experience conducting such botanical field surveys under the direction of an experienced botanical field surveyor	No information provided	No
Familiarity with federal, state, and local statutes and regulations related to plants and plant collecting	No information provided	No
Experience analyzing the impacts of projects on native plant species and sensitive natural communities	No information provided	No
Survey Preparation		
Compile relevant botanical information in the general project area to provide a regional context, i.e., data base review, and to generally identify vegetation and habitat types potentially occurring in the project area based on biological and physical properties (e.g., soils) of the project area	No such compilation reported	No
Develop list of special status plants and sensitive natural communities with potential to occur within the vegetation and habitat types identified (special status plants and sensitive natural communities in a project area may not be limited to those on the list)	A list was prepared.	Yes
Survey Design		
Survey extent should cover entire project area, including areas that will be directly or indirectly impacted by the project, and adjoining properties	Unknown. The survey consisted of "walking the site."	No
Use systematic field techniques, e.g., parallel transects, in all habitats of the project area to ensure thorough coverage	No indication of systematic search	No

Survey at the times of year when plants will be both evident and identifiable, usually during flowering or fruiting	Surveyed on 24 June 2022, which is still within the flowering season of many species, but rather late for a grassland community	Yes
Space (multiple) survey visits throughout the growing season to accurately determine what plants exist in the project area	Only one survey completed	No
When special status plants are known to occur in the type(s) of habitat present in a project area, observe reference sites to determine whether those plants are identifiable at the times of year the surveys take place; Describe reference site(s), if visited, and phenological development of special status plant(s) at those reference sites	No mention of reference site	No
Survey Methods		
Identify names and qualifications of botanical field surveyor(s)	Name reported, but no qualifications	Partial
Dates of surveys (indicating the botanical field surveyor(s) that surveyed each area on each survey date), and total person-hours spent	Date reported, but not person-hours	No
Discuss survey preparation methodology	Reported data sources consulted	Partial
List special status plants and sensitive natural communities with potential to occur in the region; identify all taxa to level necessary to determine whether they are special status	No list of sensitive natural communities in the area, but serpentine bunchgrasses shown on a map	Partial
Describe and map the area surveyed relative to the project area	Survey area not demarked	No
Reporting		
Describe the proposed project		Yes
Discuss all adverse conditions in the botanical survey report		Yes
Document all plant taxa observed		No
Detailed data and maps for all special status plants and sensitive natural communities detected	None reportedly found	NA
Report specific geographic locations where the special status plants and sensitive natural communities were found, usually via GPS		NA
Site-specific characteristics of occurrences, such as associated species, habitat and microhabitat, structure of vegetation, topographic features, soil type, texture, and soil parent material. If in wetland, describe direction of flow and integrity of surface or subsurface hydrology and adjacent off-site hydrological influences as appropriate		NA

The number of individuals in each special status plant population as counted (if population is small) or estimated (if population is large)		NA
Percentage of each special status plant in each life stage such as seedling, vegetative, flowering, and fruiting		NA
Density of special status plants		NA
Digital images of special status plants and sensitive natural communities in the project area, with diagnostic features		NA
Detailed map of the project area that identifies topographic and landscape features and includes a north arrow and bar scale		Yes
Vegetation map of project area using Survey of California Vegetation Classification and Mapping Standards at thematic and spatial scale that allows the display of all sensitive natural communities		Yes
Soil map of the project area	No map reported	No
Describe biological setting, including all natural communities, geological and hydrological characteristics, and land use or management history		Partial
Discuss potential for a false negative botanical field survey		No
Discuss how climatic conditions may have affected survey results		No
Discuss how survey timing may affect comprehensiveness		No
List references used, including persons contacted and herbaria visited		No

Denise Duffy & Associates (2023) failed to achieve any of the burrowing owl survey guidelines (CDFW 2012). Nor were any guidelines followed for American badger, grasshopper sparrow, or any other special-status species of wildlife. The IS/MND lacks supporting evidence for any of its conclusions and implications that special-status species are absent from the project site.

Environmental Setting informed by Desktop Review

The purpose of literature and database review, and of consulting with local experts, is to inform the reconnaissance survey, to augment it, and to help determine which protocol-level detection surveys should be implemented. Analysts need this information to identify which species are known to have occurred at or near the project site, and to identify which other special-status species could conceivably occur at the site due to geographic range overlap and site conditions. This step is important because the reconnaissance survey is not going to detect all of the species of wildlife that make use of the site. This step can identify those species yet to be detected at the site but which have been documented to occur nearby or whose available habitat associations are consistent with site conditions. Some special-status species can be ruled out of further analysis, but only if compelling evidence is available in support of such determinations (see below).

Denise Duffy & Associates (2023) and the IS/MND inadequately inform of a literature and database review, i.e., the desktop review. The IS/MND's desktop review is incomplete by neglecting eBird and iNaturalist, which are useful species occurrence databases that are also readily available. Whereas the IS/MND relies on compendia of species distributions, it provides no evidence that local experts were consulted for knowledge of occurrences of special-status species in the project area. The desktop review is incomplete, and that part of it that is presented is also flawed (see below).

By including in the species' likelihood of occurrence analysis only species whose documented occurrences within the nearest CNDDDB quadrangles, Denise Duffy & Associates (2023) and the IS/MND screen out many special-status species from further consideration in their characterization of the wildlife community as a component of the baseline environmental setting. CNDDDB is not designed to support absence determinations or to screen out species from characterization of a site's wildlife community. As noted by CNDDDB, "*The CNDDDB is a positive sighting database. It does not predict where something may be found. We map occurrences only where we have documentation that the species was found at the site. There are many areas of the state where no surveys have been conducted and therefore there is nothing on the map. That does not mean that there are no special status species present.*" Denise Duffy & Associates (2023) and the IS/MND misuse CNDDDB.

CNDDDB relies entirely on volunteer reporting from biologists who were allowed access to whatever properties they report from. Many properties have never been surveyed by biologists. Many properties have been surveyed, but the survey outcomes never reported to CNDDDB. Many properties have been surveyed multiple times, but not all survey outcomes reported to CNDDDB. Furthermore, CNDDDB is interested only in the findings of special-status species, which means that species more recently assigned special status

will have been reported many fewer times to CNDDDB than were species assigned special status since the inception of CNDDDB. The lack of many CNDDDB records for species recently assigned special status had nothing to do with whether the species' geographic ranges overlapped the project site, but rather the brief time for records to have accumulated since the species were assigned special status. And because negative findings are not reported to CNDDDB, CNDDDB cannot provide the basis for estimating occurrence likelihoods, either.

In my assessment based on database reviews (eBird and iNaturalist), 126 special-status species of wildlife are known to occur near enough to the site to warrant analysis of occurrence potential (Table 2). Of these 126 species, 38 (30%) have been documented within 1.5 miles of the site ('Very close'), another 29 (23%) within 1.5 and 4 miles ('Nearby'), and another 52 (41%) within 4 to 30 miles ('In region'). More than half (53%) of the species in Table 2 have been reportedly seen within 4 miles of the project site. The site therefore carries the potential for supporting many special-status species of wildlife based on proximity of recorded occurrences.

Of the 126 special-status species of wildlife that appear in Table 2, the IS/MND addresses only 25 (19.8%) of them, determining only 2 of them to have moderate occurrence likelihood. The IS/MND determines occurrence potential to be low for 13 of the species, unlikely for 8 species, and none for 2 species. Of the 10 species assigned unlikely to no potential, 2 have been documented within 1.5 miles of the site, 5 have been documented within 1.5 and 4 miles of the site, and 2 have been documented within 4 and 30 miles of the site. Too many of the occurrence potentials the IS/MND assigns to special-status species fail to comport with documented occurrences in eBird and iNaturalist.

I concur with a standard that was used by Denise Duffy & Associates (2023) and the IS/MND (p. 59) where it writes, "The CNDBB reports one occurrence of this species [grasshopper sparrow] within the quadrangles reviewed, located approximately 3.8 miles southeast of the project site. Therefore, this species has a moderate potential to occur within the project site." The agreeable standard is the interpretation of an occurrence record within 4 miles of the project site as indicative of a moderate occurrence likelihood on the project site. I have long relied on just such a standard, and I have found it fairly predictive. The problem, however, is the IS/MND's inconsistency in implementation of this standard. In the case of grasshopper sparrow, an occurrence record 3.8 miles from the site justified the IS/MND's assignment of moderate occurrence potential. But in the case of tricolored blackbird, which was documented 0.87 miles from the site (eBird), the distance standard did not apply, as the IS/MND determines the species does not occur on the project site. Similarly, the IS/MND does not apply its distance standard to western pond turtle (0.11 miles, iNaturalist), California tiger salamander (1 mile, CNDDDB), golden eagle (0.14 miles), Cooper's hawk (0.14 miles), northern harrier (0.14 miles), white-tailed kite (immediately adjacent), and Swainson's hawk (1.82 miles).

Table 2. Occurrence likelihoods of special-status species at or near the proposed project site, according to eBird/iNaturalist records (<https://eBird.org>, <https://www.inaturalist.org>), where ‘Very close’ indicates within 1.5 miles of the site, “nearby” indicates within 1.5 and 4 miles, and “in region” indicates within 4 and 30 miles, and ‘in range’ means the species’ geographic range overlaps the site.

¹ Listed as FT or FE = federal threatened or endangered, FC = federal candidate for listing, BCC = U.S. Fish and Wildlife Service Bird of Conservation Concern, CT or CE = California threatened or endangered, CCT or CCE = Candidate California threatened or endangered, CFP = California Fully Protected (California Fish and Game Code 3511), SSC = California Species of Special Concern (not threatened with extinction, but rare, very restricted in range, declining throughout range, peripheral portion of species' range, associated with habitat that is declining in extent), SSC1, SSC2 and SSC3 = California Bird Species of Special Concern priorities 1, 2 and 3, respectively (Shuford and Gardali 2008), WL = Taxa to Watch List (Shuford and Gardali 2008), and BOP = Birds of Prey (CFG Code 3503.5), and WBWG = Western Bat Working Group with priority rankings, of low (L), moderate (M), and high (H).

The IS/MND also provides a flawed analysis of the occurrence potential of California tiger salamander. According to Denise Duffy & Associates (2023:App. D), “Species [California tiger salamander] is unlikely to utilize the project site as a habitat corridor due to the adjacent interstate highway that separates the project site and Coyote Creek.” I understand that there is a CNDDDB record of California tiger salamander in the riparian woodland of Coyote Creek, but California tiger salamander habitat is in grassland-wetland complexes where the wetlands consist of ponds that are not connected to any flowing water such as in Coyote Creek. California tiger salamanders breed in vernal pools, small ponds, livestock stock ponds, and rain pools, and they spend about 95% of their lives within the burrows of ground squirrels and pocket gophers in grasslands up to 1.37 miles from their breeding pools (Orloff 2011). Google Earth imagery shows potential breeding ponds 0.37 miles and 0.87 miles upslope from the project site, and there are likely other small ponds and rain pools that I missed on the imagery. It is quite possible that California tiger salamanders occur on the project site. Detection surveys on and around the project site are warranted.

Considering the nearness of occurrence records and the suitability of the site for foraging, multiple visual-scan surveys need to be directed toward white-tailed kite, northern harrier, merlin, peregrine falcon, prairie falcon, loggerhead shrike, yellow-billed magpie. These surveys should number at least 4, they should be spaced at least 3 weeks apart, they should last at least 2 hours each, and they should be initiated in the early morning and in the evening daylight hours. Additional surveys should be completed by qualified biologists for multiple special-status species of bats. Of these species, the IS/MND only addresses Swainson’s hawk. The environmental setting in the IS/MND is deficient and prevents the City from accurately determining whether the project’s impacts on biological resources may be significant.

POTENTIAL BIOLOGICAL IMPACTS

An impacts analysis should consider whether and how the proposed project would affect members of a species, larger demographic units of the species, the whole of a species, and ecological communities. In the following, I introduce several types of impacts likely to result from the project, only one of which – potential interference with wildlife movement in the region – is addressed in the IS/MND, and that analysis is flawed. No mention is made in the IS/MND of the other potential impacts I address in the following paragraphs.

HABITAT LOSS

The project would contribute further to habitat fragmentation, which poses serious problems to wildlife in the region. Habitat fragmentation and habitat loss have been recognized as the most likely leading causes of a documented 29% decline in overall bird abundance across North America over the last 48 years (Rosenberg et al. 2019). Habitat loss not only results in the immediate numerical decline of wildlife, but it also results in permanent loss of productive capacity.

In the case of birds, two methods exist for estimating the loss of productive capacity that would be caused by the project. One method would involve surveys to count the number of bird nests and chicks produced. The alternative method is to infer productive capacity from estimates of total nest density elsewhere. Two study sites in grassland-wetland-woodland complexes had total bird nesting densities of 32.8 and 35.8 nests per acre (Young 1948, Yahner 1982) for an average 34.3 nests per acre, but the project site is covered mostly by annual grassland. Total nesting density is probably lower than at the study sites I cited. Assuming the 28.9-acre project site supports about a third of the total nesting density of the above-referenced study sites, one can predict a loss of 330 bird nests.

The loss of 330 nest sites of birds would qualify as a potentially significant project impact, but the impact does not end with the immediate loss of nest sites as nest substrate is removed and foraging grounds graded in preparation for impervious surfaces. The reproductive capacity of the site would be lost. The average number of fledglings per nest in Young's (1948) study was 2.9. Assuming Young's (1948) study site typifies bird productivity, the project would prevent the production of 957 fledglings per year. Assuming an average bird generation time of 5 years, the lost capacity of both breeders and annual fledgling production can be estimated from an equation in Smallwood (2022): $\{(nests/year \times chicks/nest \times number\ of\ years) + (2\ adults/nest \times nests/year) \times (number\ of\ years \div years/generation)\} \div (number\ of\ years) = 1,089\ birds\ per\ year\ denied\ to\ California.$ In the face of a potential project impact of this magnitude, I conclude that the potential project impacts to the productive capacity of birds would be significant.

WILDLIFE MOVEMENT

One of CEQA's principal concerns regarding potential project impacts is whether a proposed project would interfere with wildlife movement in the region (CEQA Guidelines Appendix G, § IV.d and IS/MND, p. 60). The IS/MND's analysis directed towards answering this question is founded on no survey that was designed or intended to determine whether wildlife rely on the site for movement in the region. There was no sampling regime and there was no program of observation to quantitatively or to even qualitatively assess wildlife movement patterns. The analysis simply consists of the following speculation mixed with misleading assertions such as that the project site is absent of wildlife (IS/MND p. 65): "The project is proposed in a semi-urbanized setting and has not been found to contain any native resident or wildlife species. The southwestern adjacent parcel contains Coyote Creek riparian woodlands approximately 380 feet southwest of the Hellyer Avenue border of the project site. The northwestern adjacent parcel contains serpentine bunchgrass grasslands, located approximately 510 feet northwest of the Piercy Road border of the project site. There are no streams, creeks or wetlands located on the project site, which is largely dominated by nonnative annual forbs and dirt roads." In fact, the project site does support wildlife, as detailed in the discussion above, and its nearness to Coyote Creek's riparian woodlands and serpentine bunchgrass grasslands should increase rather than diminish the likelihood that wildlife use the site to move through the region. It is well documented that migratory wildlife tend to channel their movements along natural stream corridors and valley features.

TRAFFIC IMPACTS TO WILDLIFE

The IS/MND neglects to address one of the project's most obvious, substantial impacts to wildlife, and that is wildlife mortality and injuries caused by project-generated traffic. Project-generated traffic would endanger wildlife that must, for various reasons, cross roads used by the project's traffic (Photos 1–4), including along roads far from the project footprint. Vehicle collisions have accounted for the deaths of many thousands of amphibian, reptile, mammal, bird, and arthropod fauna, and the impacts have often been found to be significant at the population level (Forman et al. 2003). Across North America traffic impacts have taken devastating tolls on wildlife (Forman et al. 2003). In Canada, 3,562 birds were estimated killed per 100 km of road per year (Bishop and Brogan 2013), and the US estimate of avian mortality on roads is 2,200 to 8,405 deaths per 100 km per year, or 89 million to 340 million total per year (Loss et al. 2014). Local impacts can be more intense than nationally.

Photo 1. *A Gambel's quail dashes across a road on 3 April 2021. Such road crossings are usually successful, but too often prove fatal to the animal. Photo by Noriko Smallwood.*

Photo 2. *Great-tailed grackle walks onto a rural road in Imperial County, 4 February 2022.*

Photo 3. *Mourning dove killed by vehicle on a California road. Photo by Noriko Smallwood, 21 June 2020.*

Photo 4. *Raccoon killed on Road 31 just east of Highway 505 in Solano County. Photo taken on 10 November 2018.*

The nearest study of traffic-caused wildlife mortality was performed along a 2.5-mile stretch of Vasco Road located only 37 miles away from the project site, in Contra Costa County, California. Fatality searches in this study found 1,275 carcasses of 49 species of mammals, birds, amphibians and reptiles over 15 months of searches (Mendelsohn et al. 2009). This fatality

number needs to be adjusted for the proportion of fatalities that were not found due to scavenger removal and searcher error. This adjustment is typically made by placing carcasses for searchers to find (or not find) during their routine periodic fatality searches. This step was not taken at Vasco Road (Mendelsohn et al. 2009), but it was taken as part of another study next to Vasco Road (Brown et al. 2016). Brown et al.'s (2016) adjustment factors for carcass persistence resembled those of Santos et al. (2011). Also applying searcher detection rates from Brown et al. (2016), the adjusted total number of fatalities was estimated at 12,187 animals killed by traffic on the road. This fatality number over 1.25 years and 2.5 miles of road translates to 3,900 wild animals per mile per year. In terms comparable to the national estimates, the estimates from the Mendelsohn et al. (2009) study would translate to 243,740 animals killed per 100 km of road per year, or 29 times that of Loss et al.'s (2014) upper bound estimate and 68 times the Canadian estimate. The IS/MND fails to analyze whether increased traffic generated by the project site would similarly result in local impacts on wildlife. Without this analysis, the IS/MND lacks evidence to support a finding of no significant impact. Based on the analysis provided above, there is evidence of a potentially significant impact from the Project's traffic-related wildlife mortality and this analysis should be set forth in an EIR.

For wildlife vulnerable to front-end collisions and crushing under tires, road mortality can be predicted from the study of Mendelsohn et al. (2009) as a basis, although it would be helpful to have the availability of more studies like that of Mendelsohn et al. (2009) at additional locations. My analysis of the Mendelsohn et al. (2009) data resulted in an estimated 3,900 animals killed per mile along a county road in Contra Costa County. Two percent of the estimated number of fatalities were birds, and the balance was composed of 34% mammals (many mice and pocket mice, but also ground squirrels, desert cottontails, striped skunks, American badgers, raccoons, and others), 52.3% amphibians (large numbers of California tiger salamanders and California red-legged frogs, but also Sierran treefrogs, western toads, arboreal salamanders, slender salamanders and others), and 11.7% reptiles (many western fence lizards, but also skinks, alligator lizards, and snakes of various species). The metric, annual Vehicle Miles Traveled (VMT), is useful for predicting wildlife mortality because I was able to quantify

miles traveled along the studied reach of Vasco Road during the time period of the Mendelsohn et al. (2009), hence enabling a rate of fatalities per VMT that can be projected to other sites, assuming similar collision fatality rates.

Predicting project-generated traffic impacts to wildlife

The IS/MND predicts 10,664,720 annual VMT. During the Mendelsohn et al. (2009) study, 19,500 cars traveled Vasco Road daily, so the vehicle miles that contributed to my estimate of non-volant fatalities was 19,500 cars and trucks \times 2.5 miles \times 365 days/year \times 1.25 years = 22,242,187.5 vehicle miles per 12,187 wildlife fatalities, or 1,825 vehicle miles per fatality. This rate divided into the predicted annual VMT above would predict 5,844 vertebrate wildlife fatalities per year. Considering that some of the landscape around the project site and through which project-generated traffic would pass through, it would be reasonable to predict that the traffic-caused mortality would be lower than estimated at the Vasco Road study site. Assuming this landscape around the project site supports only half of the number of animals crossing roads as compared to the Vasco Road study site, the project-generated traffic would cause 2,922 wildlife fatalities per year, but even this number would qualify as a substantial and highly significant project impact.

Mitigation measures to improve wildlife safety along roads are available and are feasible (see Recommended measures, below), and they need exploration for their suitability with the proposed project in an EIR.

CUMULATIVE IMPACTS

The IS/MND identified only one planned or approved project located within 1,000 feet of the project site: 644/675 Piercy Road. This project adjoins the site to the east and consists of one single-story industrial building with a maximum of 250,000 square feet, which would include 24-hour truck trips accessing Hellyer Avenue and mechanical equipment noise. Given that the two projects are on adjoining sites, the projects likely host the same or similar biological resources as discussed in these comments and may result in cumulatively considerable impacts on these resources that must be studied in an EIR.

The IS/MND's impacts analysis on biological resources does not assess the project's potentially significant cumulative impacts on biological resources. However, the Mandatory Findings of Significance determined that the cumulative impacts would be less than significant, relying on the proposed mitigation for project-level impacts on riparian habitat or other sensitive natural communities, migration of species, or applicable biological resources protection ordinances to reduce cumulative impacts to less than significant levels. The IS/MND fails to support its determination with facts and analysis supporting the conclusion that the cumulative impact would be less than significant. The IS/MND lacks the evidence necessary to demonstrate that the project's incremental effect and the effects of other projects is not significant, especially with regards to the American badger, Western burrowing owl, and nesting birds.

Considering the number of special-status species that potentially occur on and around the project site, such as burrowing owl, California tiger salamander, white-tailed kite, northern harrier and American badger, and considering the rapid decline of burrowing owls despite the SCVHP, and considering the rapid urbanization and industrialization of Santa Clara Valley, it is my opinion that the project would likely contribute substantially to cumulative impacts, and that these impacts are likely to be significant. For burrowing owls specifically, the species is rapidly heading towards extirpation in the Bay area. In 2022, there were only 17 known breeding pairs in Santa Clara County (Talon Ecological Research Group 2023). The latest burrowing owl monitoring report stated, “the goal of establishing a stable, then increasing owl population is not being met” (Talon Ecological Research Group 2023). In fact, the burrowing owl population in the SCVHP study area has declined about 80% since 2006 (Talon Ecological Research Group 2023).

Furthermore, as discussed below, the proposed mitigation measures for the project’s significant impacts on American badger, Western burrowing owl, and nesting birds are inadequate to reduce the project’s impacts to less than significant levels. Thus, the project’s impacts on these species may be significant as well as cumulatively considerable. The project’s potentially significant cumulative impact on these species must be evaluated in an EIR.

MITIGATION MEASURES

The mitigation measures described in the IS/MND are those recommended by the environmental consultant, Denise Duffy & Associates (2023). Denise Duffy & Associates (2023:1) “recommends appropriate avoidance, minimization, and mitigation measures necessary to reduce those impacts to a less than significant level in accordance with the California Environmental Quality Act (CEQA).” However, none of the measures are truly avoidance measures, none would reduce impacts, and the minimization measures would achieve negligible minimization of impacts. I provide more detailed comments on these failings of the mitigation plan, below.

Mitigation measures in the IS/MND are also deferred, which is not allowed by CEQA, and they lack specific performance criteria. When formulation of mitigation is deferred, the agency must adopt specific performance standards the deferred mitigation will achieve, and it must identify potential action(s) that can feasibly achieve the performance standard (CEQA Guidelines section 15126.4(a)(1)(B)).

MM BIO-1a: *A qualified biologist shall conduct an Employee Education Program for the construction crew regarding the appropriate access route(s), how a biological monitor shall safely examine the area, the identification of special-status species that may be present; the specific mitigation measures that shall be incorporated into the construction effort, and proper procedures to avoid impacts if a special-status species is encountered within the project site. ...Documentation of the completed Employee Education Program shall be provided to the Director of Planning, Building and Code Enforcement or Director’s designee within 14 days of program completion.*

I concur that an employee education program should be implemented, but it would need specific performance standards described in the CEQA review. More details of the program are needed to ensure the adequacy of this measure to mitigate the project's significant impacts, such as candidate access routes to the project site, detailed measures to ensure the safety of the biological monitor, descriptions of special-status species that would be provided to the construction crew, the specific measures that would be incorporated into the construction effort to minimize impacts, and the procedures that would be implemented to manage situations in which members of special-status species are encountered during grading or construction.

MM BIO-1b: *A qualified biologist shall conduct focused pre-construction surveys for badger dens no more than two weeks prior to the start of any construction activity in all suitable habitat proposed for construction, ground disturbance, or staging.*

Whereas I concur that preconstruction, take-avoidance surveys should be completed, the IS/MND proposes preconstruction surveys where detection surveys have yet to be completed. Preconstruction surveys are not designed to detect the target species with anywhere close to the same likelihood as are protocol-level detection surveys, and so are intended as follow-up surveys to detection surveys, the latter of which are needed to inform the CEQA impacts analysis and identification of feasible mitigation measures to reduce the project's significant impacts on this species.

MM BIO-1b continued: *If potential dens are observed, the following measures are required to avoid potential significant impacts to the American badger:*

- *If the qualified biologist determines that potential dens are inactive, the biologist shall excavate these dens by hand with a shovel to prevent badgers from re-using them during construction.*
- *If the qualified biologist determines that potential dens may be active, the entrances of the dens shall be blocked with soil, sticks, and debris for three to five days to discourage the use of these dens prior to project disturbance. The den entrances shall be blocked to an incrementally greater degree over the three- to five-day period. After the qualified biologist determines that badgers have stopped using active dens within the project boundary, the dens shall be hand-excavated with a shovel to prevent re-use during construction.*
- *If the qualified biologist determines that the potential den is an active natal den the qualified biologist shall establish a no-construction buffer around the den. The buffer will be delineated by fencing or flagging. No construction shall be allowed inside the buffer until the qualified biologist determines the young are no longer reliant upon the den for survival.*

Documentation and recommendations of the completed focused badger survey shall be provided to the Director of Planning, Building and Code Enforcement or Director's designee within 14 days of program completion.

This mitigation language allows a single individual to make subjective decisions, outside the public's view, to determine whether a potential badger burrow is to be blocked with soil or excavated, thereby risking take of American badgers. It also allows a single individual to determine the buffer area around active natal dens. No guidance or criteria is provided on the appropriate buffer, such as whether and how it should be adjusted based on the type of construction activity underway nearby. American badgers do not leave fresh sign of use at every burrow they occupy, as many serve as diurnal refugia (American badgers are principally nocturnal). This measure lacks objective criteria, is unenforceable, and risks harm to American badgers. This measure will not reduce the project's significant impacts on the species and must be evaluated in an EIR.

MM BIO-2: *...The project applicant shall schedule ... construction activities to avoid the nesting season. The nesting season for most birds, including most raptors in the San Francisco Bay area, extends from February 1 through August 31 (inclusive).*

The avian breeding season recognized by the California Department of Fish and Wildlife is now 1 February through 15 September. Although I concur that it is best to complete grading and construction outside the breeding season, this measure would fail to avoid the takings of 28.9 acres of avian breeding habitat, thereby denying Californians another 1,089 birds per year (see earlier comment under Habitat Loss). This measure might prevent the direct destruction of nests that would have been attempted the following breeding season, but it would not prevent the loss of breeding capacity and the loss of birds.

MM BIO-2 continued: *If ... construction cannot avoid the nesting season, pre-construction surveys for nesting birds shall be completed by a qualified ornithologist or biologist to ensure that no nests shall be disturbed during project implementation. This survey shall be completed no more than 14 days prior to the initiation of construction activities during the early part of the breeding season (February 1st through April 30th, inclusive) and no more than 30 days prior to the initiation of these activities during the late part of the breeding season (May 1st through August 31st, inclusive). During this survey, the qualified ornithologist/biologist shall inspect all trees and other possible nesting habitats immediately adjacent to the construction areas for nests.*

Whereas I concur that preconstruction, take-avoidance surveys should be completed, the vast majority of bird nests would not be found by biologists assigned to the survey. I have surveyed for grassland nesters, including an intensive survey effort that began in February 2023 and is ongoing. In the ongoing study, I have surveyed my study site 23 times without finding the exact location of a single grassland nester. Based on behavior patterns, I know which pairs of birds are nesting in grassland, but not exactly where their nests are located. I have found that the nests of grassland birds are the most difficult to locate. Cavity nesters can more effectively defend their nests against predators, whereas ground nesters are highly vulnerable to predation. Ground nesters, which are the types of birds that occur on the project site, are highly adept at concealing their nests both physically and behaviorally. Based on my experience, it is highly likely that preconstruction survey would fail to find any of the nests of ground-nesting birds

that truly occur on the project site. The IS/MND's implication that preconstruction survey would minimize or reduce potential impacts to nesting birds to less-than-significant is unsubstantiated. Even assuming the biologists managed to find all of the nest sites of breeding birds, which would be highly unlikely, this measure would fail to avoid the takings of 28.9 acres of avian breeding habitat, thereby denying Californians another 1,089 birds per year (see earlier comment under Habitat Loss).

MM BIO-2 continued: *If an active nest is found in an area that would be disturbed by construction, the ornithologist, in consultation with the California Department of Fish and Wildlife (only if needed), shall determine the extent of a construction free buffer zone to be established around the nest, (typically 250 feet for raptors and 100 feet for other birds), to ensure that raptor or migratory bird nests shall not be disturbed during project construction. The buffer would ensure that raptor or migratory bird nests would not be disturbed during project construction or until the biologist determines the nest is no longer active or the nesting season ends. If construction ceases for two days or more then resumes again during the nesting season, an additional survey shall be necessary to avoid impacts to active bird nests that may be present.*

This measure allows for consultation with CDFW to be optional and fails to describe when consultation with CDFW would be "needed." In effect, this mitigation language again allows a single individual to make a subjective decision, outside the public's view, to determine the buffer area for any given species of nesting birds. This measure lacks objective criteria, and is unenforceable.

MM BIO-3a: *Preconstruction surveys for burrowing owls in all suitable habitat areas. The purpose of the preconstruction surveys is to document the presence or absence of burrowing owls on the project site, particularly in areas within 250 feet of construction activity. To maximize the likelihood of detecting owls, the preconstruction survey shall last a minimum of three hours. The survey shall begin 1 hour before sunrise and continue until 2 hours after sunrise (3 hours total) or begin 2 hours before sunset and continue until 1 hour after sunset. A minimum of two surveys shall be conducted (if owls are detected on the first survey, a second survey is not needed). All owls observed shall be counted and their location shall be mapped. Surveys shall conclude no more than 2 calendar days prior to construction. Therefore, the project applicant must begin surveys no more than 4 days prior to construction (2 days of surveying plus up to 2 days between surveys and construction). To avoid last minute changes in schedule or contracting that may occur if burrowing owls are found, the project applicant may also conduct a preliminary survey up to 14 days before construction. This preliminary survey may count as the first of the two required surveys as long as the second survey concludes no more than 2 calendar days in advance of construction. If no burrowing owls are observed during the preconstruction survey no further mitigation is required.*

Whereas I concur that preconstruction, take-avoidance surveys should be completed, the IS/MND proposes preconstruction surveys where detection surveys have yet to be completed. Preconstruction surveys are not designed to detect the target species with

anywhere close to the same likelihood as are protocol-level detection surveys, and so are intended as follow-up surveys to detection surveys per CDFW (2012), the latter of which are needed to inform the impacts analysis and feasible mitigation measures.

MM BIO-3b: *(This mitigation is based upon the survey requirements in the SCVHP and derived from the CDFW burrowing owl survey protocol) If evidence of western burrowing owls is found during the breeding season (February 1–August 31, inclusive), prior to the issuance of any demolition, grading or building permits (whichever occurs first), the project applicant shall prepare an avoidance and minimization plan. The plan shall include measures to avoid all nest sites that could be disturbed by project construction during the remainder of the breeding season or while the nest is occupied by adults or young (occupation includes individuals or family groups foraging on or near the site following fledging). The plan shall be submitted to the Director of Planning, Building and Code Enforcement or Director’s designee for review and approval prior to the issuance of any demolition, grading or building permits (whichever occurs first). Avoidance shall include establishment of a 250-foot non-disturbance buffer zone around nests. Construction may occur outside of the 250-foot non-disturbance buffer zone. Construction may occur inside the 250-foot non-disturbance buffer during the breeding season if:*

- *the nest is not disturbed, and*
- *the project applicant develops an avoidance, minimization, and monitoring plan that will be reviewed by the Implementing Entity and CDFW prior to project construction based on the following criteria.*

o The Implementing Entity and the Wildlife Agencies approves of the avoidance and minimization plan provided by the project applicant.

o A qualified biologist monitors the owls for at least 3 days prior to construction to determine baseline nesting and foraging behavior (i.e., behavior without construction).

o A qualified biologist monitors the owls during construction and finds no change in owl nesting and foraging behavior in response to construction activities.

If there is any change in owl nesting and foraging behavior as a result of construction activities, these activities shall cease within the 250-foot buffer. Construction cannot resume within the 250-foot buffer until the adults and juveniles from the occupied burrows have moved out of the project site.

If monitoring indicates that the nest is abandoned prior to the end of nesting season and the burrow is no longer in use by owls, the non-disturbance buffer zone can be removed. The qualified biologist shall excavate the burrow to prevent reoccupation after receiving approval from the Wildlife Agencies. During the non-breeding season (September 1–January 31, inclusive), the project applicant shall establish a 250-foot non-disturbance buffer around occupied burrows as determined by a qualified biologist. Construction activities outside of this 250-foot buffer are allowed.

Construction activities within the non-disturbance buffer are allowed if the following

criteria are met in order to prevent owls from abandoning important overwintering sites.

- The same qualified biologist monitors the owls during construction and finds no change in owl foraging behavior in response to construction activities.*
- If there is any change in owl nesting and foraging behavior as a result of construction activities, these activities shall cease within the 250-foot buffer.*
- If the owls are gone for at least one week, the project applicant may request approval from the Implementing Entity that a qualified biologist excavate usable burrows to prevent owls from re-occupying the site. After all usable burrows are excavated, the buffer zone shall be removed and construction may continue.*

Monitoring must continue as described above for the non-breeding season as long as the burrow remains active.

The mitigation plan applied to burrowing owls should not be based solely on guidance provided by the Santa Clara Valley Habitat Plan (SCVHP). According to the latest burrowing owl monitoring report, “the goal of establishing a stable, then increasing owl population is not being met” (Talon Ecological Research Group 2023). In fact, the burrowing owl population in the SCVHP study area has declined about 80% since 2006 (Talon Ecological Research Group 2023). Despite good intentions of qualified biologists, the SCVHP is clearly failing to meet its conservation objectives related to burrowing owls. The SCVHP presently provides an unreliable framework for mitigating potential project impacts to burrowing owls.

Furthermore, the excavation of burrowing owl burrows for the purpose of passive relocation would not be consistent with the CDFW (2012) mitigation guidelines. In fact, CDFW (2012) warns that passive relocation can be interpreted as take.

MM BIO-3c: *Based on the avoidance, minimization, and monitoring plan developed (as required above), during construction, the project applicant shall establish and maintain the non-disturbance buffer zones throughout the construction period, if applicable. A qualified biologist shall monitor the site consistent with the requirements described above to ensure that buffers are enforced and owls are not disturbed. The qualified biologist shall also conduct training with construction personnel on the avoidance procedures, buffer zones, and protocols in the event that a burrowing owl flies into an active construction zone.*

This measure might prevent the direct destruction of nests during the immediate breeding season, but it would not prevent the loss of breeding capacity and the loss of burrowing owls. Regardless of how the project would attempt to minimize impacts to burrowing owls breeding on or near the project site at the time of construction, burrowing owls would lose the most critically important asset needed for persistence, and that is their habitat. The IS/MND proposes no compensatory mitigation for habitat loss, which is a major deficiency of the IS/MND.

RECOMMENDED MEASURES

Detection Surveys: Protocol-level detection surveys are needed to (1) support negative findings of species when appropriate, (2) inform preconstruction surveys to improve their efficacy, (3) estimate project impacts, and (4) inform compensatory mitigation and other forms of mitigation. Detection survey protocols and guidelines are available from resource agencies for most special-status species. Otherwise, professional standards can be learned from the scientific literature and species' experts. Survey protocols that need to be implemented include CDFW (2012) for burrowing owls. The guidelines call for multiple surveys throughout the breeding season.

Detection Surveys for Bats: Multiple special-status species of bats likely occur on and around the project site. A qualified bat biologist should be tasked with completing protocol-level detection surveys for bats. It needs to be learned whether bats roost in the area and whether bats forage on site.

Preconstruction surveys: Completion of reports of the methods and outcomes of preconstruction surveys for nesting birds and other wildlife should be required. The reports should be made available to the public.

Construction Monitoring: If the project goes forward, two or more qualified biologists need to serve as construction monitors. They should have the authority to stop construction when construction poses a threat to wildlife, and they should have the authority to rectify situations that pose threats to wildlife. The events associated with construction monitoring, such as efforts to avoid impacts and findings of dead and injured wildlife, need to be summarized in a report that is subsequently made available to the public.

Habitat Loss: If the project goes forward, compensatory mitigation would be warranted for habitat loss. At least an equal area of land should be protected in perpetuity as close to the project site as possible, but a larger area is likely warranted to mitigate for the impacts to so many special-status species of wildlife as likely occur on the site. And additional compensatory mitigation should be linked to impacts identified in construction monitoring.

Road Mortality: Compensatory mitigation is needed for the increased wildlife mortality that would be caused by the project-generated road traffic in the region. I suggest that this mitigation can be directed toward funding research to identify fatality patterns and effective impact reduction measures such as reduced speed limits and wildlife under-crossings or overcrossings of particularly dangerous road segments. Compensatory mitigation can also be provided in the form of donations to wildlife rehabilitation facilities (see below).

Fund Wildlife Rehabilitation Facilities: Compensatory mitigation ought also to include funding contributions to wildlife rehabilitation facilities to cover the costs of injured animals that will be delivered to these facilities for care. Many animals would likely be injured by collisions with automobiles.

Thank you for your attention,

Shawn Smallwood, Ph.D.

Married, father of two.

Ecologist

Expertise

- Finding solutions to controversial problems related to wildlife interactions with human industry, infrastructure, and activities; and,
- Using systems analysis and experimental design principles to identify meaningful ecological patterns that can inform conclusions and management decisions.

Education

Ph.D. Ecology, University of California, Davis. September 1990.
M.S. Ecology, University of California, Davis. June 1987.
B.S. Anthropology, University of California, Davis. June 1985.
Corcoran High School, Corcoran, California. June 1981.

Experience

- 337 professional publications, including:
 - 61 peer reviewed publications
 - 24 in non-reviewed proceedings
 - 244 reports, declarations, and book reviews
 - 8 in mass media outlets
 - 75 public presentations of research results at meetings
 - Reviewed many professional papers and reports
 - Testified in 4 court cases.

Associate Editor, *Journal of Wildlife Management*, March 2004 to 30 June 2007.

Editorial Board Member, *Environmental Management*, 10/1999 to 8/2004.

Associate Editor, *Biological Conservation*, 9/1994 to 9/1995. Administered independent scientific reviews of submitted, professional papers in ecology and conservation biology, and made recommendations to the Editors.

Member, Alameda County Scientific Review Committee (SRC), 8/06 to 4/11. As part of a five member committee, I investigated the causes of bird and bat collisions in the Altamont Pass Wind Resource Area, and I recommended mitigation and monitoring measures. The SRC reviews the science underlying the Alameda county Avian Protection Program, and advises the County on how to reduce wildlife fatalities.

Research Ecologist, 2/06 to 12/07, under contract to East Bay Regional Parks District. Performed research of how fossorial mammals and raptors responded to grazing treatments and wind turbines at Vasco Caves Regional Preserve. I designed the study, trained the fatality monitors and behavior observers, mapped the burrows of fossorial mammals, analyzed the data, and took the lead on writing the report.

Consulting Ecologist, 7/04 to 12/07, California Energy Commission (CEC). In collaboration with Lawrence-Livermore National Lab, I performed independent research funded by the CEC on bird behavior in the Altamont Pass Wind Resources Area. I also provided consulting services as needed to the CEC. I produced several reports to the CEC and the CEC's Public Interest Energy Research program.

Consulting Ecologist, 11/99 to present, U.S. Navy. I provide endangered species surveys at multiple Navy facilities, hazardous waste site monitoring, and habitat restoration for the endangered Fresno kangaroo rat, California tiger salamander, California red-legged frog, California clapper rail, western burrowing owl, and other species. I have worked at Naval Air Station Lemoore; Naval Weapons Station, Seal Beach, Detachment Concord; Naval Security Group Activity, Skaggs Island; National Radio Transmitter Facility, Dixon.

Part-time Lecturer, 1/98 to 2005, California State University, Sacramento. I taught Contemporary Environmental Issues, Natural Resources Conservation (twice), Mammalogy, Behavioral Ecology, and Ornithology Lab.

Senior Ecologist, 1999 to 2005, BioResource Consultants. I planned and carried out research and monitoring projects, and analyzed complex data related to avian fatalities at wind turbines, avian electrocutions on electric distribution poles across California, and avian fatalities at transmission lines.

Systems Ecologist, 7/96 to present, Consulting in the Public Interest, www.cipi.com. I am part of a multi-disciplinary consortium of scientists facilitating large-scale, environmental planning projects and litigation. We provide risk assessments, assessments of management practices, and expert witness testimony.

Chairman, Conservation Affairs Committee, The Wildlife Society--Western Section, 1999-2001. I prepared position statements and led efforts directed toward conservation issues, including travel to Washington, D.C. to lobby Congress for more wildlife conservation funding.

Systems Ecologist, 1/95 until about 2000, Institute for Sustainable Development. I headed ISD's program on integrated resources management. I developed indicators of ecological integrity for large areas, using remotely sensed data, local community involvement and GIS.

Associate, 1997-1998, Department of Agronomy and Range Science, University of California, Davis. I worked with Shu Geng and Mingua Zhang on several projects related to wildlife interactions with agriculture and patterns of fertilizer and pesticide residues in groundwater across a large landscape.

Lead Scientist, 6/96 to 6/99, National Endangered Species Network. I headed NESN's efforts to inform academic scientists and environmental activists about emerging issues regarding the

Endangered Species Act and other environmental laws pertaining to special status species. I also testified at public hearings on behalf of environmental groups and endangered species.

Ecologist, 1/97 to 6/98, Western Foundation of Vertebrate Zoology. I conducted field research to determine the impact of past mercury mining on the status of California red-legged frogs in Santa Clara County, California.

Senior Systems Ecologist, 7/94 to 12/95, EIP Associates, Sacramento, California. Provided consulting services in environmental planning. I also developed a quantitative assessment of land units for their conservation and restoration opportunities, using the ecological resource requirements of 29 special status species. I mapped vegetation and land use, and derived new spatial data from a GIS overlay of these variables with soil types, flood zones, roads, and other spatially referenced data. Using these derived data, I developed a set of indicators for prioritizing areas within Yolo County that will receive mitigation funds for habitat easements and restoration.

Post-Graduate Researcher, 10/90 to 6/94, with Dr. Shu Geng, Department of Agronomy and Range Science, *U.C. Davis*. Studied landscape and management effects on temporal and spatial patterns of abundance among pocket gophers and species of Falconiformes and Carnivora in the Sacramento Valley. I also developed and analyzed a data base of energy use in California agriculture, and I assisted with a landscape (GIS) study of groundwater contamination across Tulare County, California.

Co-teacher, 1/91 to 6/91 and 1/93 to 6/93, Graduate Group in Ecology, U.C. Davis. Co-taught conservation biology with Dr. Christine Schonewald.

Reader, 3/90 to 6/90, Department of Psychology, U.C. Davis. Assisted students of Psychobiology (taught by Dr. Richard Coss) with research and writing term papers.

Research Assistant, 11/88 to 9/90, with Dr. Walter E. Howard, Department of Wildlife and Fisheries Biology, U.C. Davis. Tested durable baits for pocket gopher control in forest plantations, and developed gopher sampling methods.

Fulbright Research Fellow, Indonesia, 7/88 to 11/88. Tested use of new sampling methods for monitoring the number of Sumatran tigers and six other species of endemic felids, and evaluated methods used by other researchers.

Research Assistant, 7/87 to 6/88, with Dr. Terrell P. Salmon, Wildlife Extension, Department of Wildlife and Fisheries Biology, U.C. Davis. Developed empirical models of mammal and bird invasions in North America, and a rating system for priority research and control of exotic species based on economic, environmental, and human health hazards in California.

Student Assistant, 3/85 to 6/87, with Dr. E. Lee Fitzhugh, Wildlife Extension, Department of Wildlife and Fisheries Biology, U.C. Davis. Developed and implemented a statewide mountain lion track count for long-term monitoring of numbers and distribution. I've continued the statewide track count since 1985 (the last count was in 2008). I also developed quantitative methods to identify individual mountain lions by their tracks, and to differentiate mountain lion and dog tracks.

Projects

Research to reduce avian mortality due to wind turbines at Altamont Pass. I used GPS and GIS to map and study environmental impacts of 5,400 wind turbines. I related the number of raptor fatalities at wind turbines to the degree of aggregation of prey species around the turbines, as well as many other factors related to where the turbines are located, how they are designed and operated, and how raptors behave in the Altamont Pass Wind Resource Area. I also serve on the Alameda County Scientific Review Committee, charged with recommending scientific monitoring methods and mitigation measures for reducing avian mortality.

Research to reduce avian mortality on electric distribution poles. Since about 2000 I have performed research directed toward reducing bird electrocutions on electric distribution poles. I led fatality monitoring efforts at 10,000 poles multiple times in California, spanning Orange County to Glenn County, and I have produced two large reports.

Cook *et al.* v. Rockwell International *et al.*, No. 90-K-181 (D. Colorado). I provided expert testimony on the role of burrowing animals in affecting the fate of buried and surface-deposited radioactive and hazardous chemical wastes at the Rocky Flats Plant, Colorado. I provided expert reports based on four site visits and the most extensive document review of burrowing animals ever conducted. I conducted transect surveys for evidence of burrowing animals and other wildlife on and around waste facilities. I also discovered substantial intrusion of waste structures by burrowing animals. I testified in federal court in November 2005, and my clients were subsequently awarded a \$553,000,000 judgment by a jury.

Hanford Nuclear Reservation Litigation. I am providing expert testimony on the role of burrowing animals in affecting the fate of buried radioactive wastes at the Hanford Nuclear Reservation, Washington. I provided three expert reports based on three site visits and extensive document review. I predicted and verified a certain population density of pocket gophers on buried waste structures, as well as incidence of radionuclide contamination in body tissue. I conducted transect surveys for evidence of burrowing animals and other wildlife on and around waste facilities. I also discovered substantial intrusion of waste structures by burrowing animals.

Expert Testimony and Declarations on Residential and Commercial Development Proposals. I have testified before the California Coastal Commission, California Energy Commission, County Boards of Supervisors, and City Councils, and I have participated with press conferences and have been deposed by attorneys. I prepared expert witness reports and court declarations, which are summarized under Reports (below).

Expert Testimony on Proposed Gas-fired Power Plants. I provided comments letters, declarations, expert reports, and oral testimony on the impacts and appropriate mitigation of about eight natural gas-fired power plants in California.

Expert Testimony on Proposed Wind Farms. I provided comment letters and oral testimony to administrative law courts in Klickitat and Skamania Counties, Washington, which convinced the court in Skamania County to require the replacement of a negative declaration with an EIS. I provided written testimony and deposition in support of litigation brought against the development of wind turbines in Cook County, Texas, which resulted in a settlement. I also

provided written comments on the first EIR for the Buena Vista Wind Energy Project in Contra County, California, prompting the withdrawal of that EIR and the preparation of an improved EIR which was later certified.

Protocol-level endangered species searches and recovery efforts. I search for special-status species using Department of Fish and Game and US Fish and Wildlife Service protocols. I have searched for, or otherwise worked with, California red-legged frog, arroyo southwestern toad, California tiger salamander, blunt-nosed leopard lizard, western pond turtle, giant kangaroo rat, Fresno kangaroo rat, San Joaquin kit fox, Sumatran tiger, willow flycatcher, least Bell's vireo, western burrowing owl, Swainson's hawk, Valley elderberry longhorn beetle and many other special-status species. I also help with recovery of the Fresno kangaroo rat at Lemoore Naval Air Station.

Conservation of the endangered Fresno kangaroo rat. I am performing applied research to identify the factors responsible for the decline of this endangered species at Lemoore Naval Air Station, and am implementing habitat enhancements designed to reverse the trend and to expand the area occupied by this species.

Impact of West Nile Virus on yellow-billed magpies. Since 2005 I have worked under contract to the Sacramento-Yolo Mosquito and Vector Control District to gather post-West Nile Virus epidemic data to pre-epidemic data I had gathered on multiple bird species in the Sacramento Valley in the 1990s, but particularly on yellow-billed magpie and American crow, which are particularly susceptible to WNV.

Workshops on HCPs. Assisted Dr. Michael Morrison with organizing and conducting a 2-day workshop on Habitat Conservation Plans, sponsored by Southern California Edison, and another 1-day workshop sponsored by PG&E. These Workshops were attended by academics, attorneys, and consultants with HCP experience. We guest-edited a Proceedings published in Environmental Management.

Mapping of biological resources along Highways 101, 46 and 41. I used GPS and GIS to delineate vegetation complexes and locations of special-status species along 26 miles of highway in San Luis Obispo County, 14 miles of highway and roadway in Monterey County, and in a large area north of Fresno, including within reclaimed gravel mining pits.

GPS mapping and monitoring at restoration sites and at Caltrans mitigation sites. I am monitoring the success of elderberry shrubs at one location, the success of willows at another location, and the response of wildlife to the succession of vegetation at both these sites. I am also using GPS to monitor the response of fossorial animals to yellow star-thistle eradication and natural grassland restoration efforts at Bear Valley, Colusa County, and at the decommissioned Mather Air Force Base in Sacramento County.

Mercury effects on Red-legged Frog. I assisted Dr. Michael Morrison and US Fish and Wildlife Service in assessing the possible impacts of historical mercury mining on the federally listed California red-legged frog in Santa Clara County. I also measured habitat variables in numerous streams.

Opposition to proposed No Surprises rule. I wrote a white paper and summary letter explaining

scientific grounds for opposing the incidental take permit (ITP) rules providing ITP applicants and holders with general assurances they will be free of compliance with the Endangered Species Act once they adhere to the terms of a “properly functioning HCP.” I obtained 188 signatures of scientists and environmental professionals on the letter submitted to the US Fish and Wildlife Service and the National Marine Fisheries Service. The letter was also provided to all US Senators. It helped change the prevailing view of HCPs as beneficial to listed species.

Natomas Basin Habitat Conservation Plan alternative. I designed narrow channel marsh to increase the likelihood of survival and recovery in the wild of giant garter snake, Swainson’s hawk and Valley Elderberry Longhorn Beetle. The design included replication and interspersions of treatments for experimental testing of critical habitat elements. I provided a report to Northern Territories, Inc.

Assessment of Environmental Technology Transfer to China, and Assessment of Agricultural Production System. I twice traveled to China and interviewed scientists, industrialists, agriculturalists, and the Directors of the Chinese Environmental Protection Agency and the Department of Agriculture to assess the need and possible pathways for environmental clean-up technologies and trade opportunities between the US and China. I spent a total of five weeks in China, including in Shandong and Linxion Provinces and in Beijing.

Yolo County Habitat Conservation Plan. I conducted the landscape ecology study of Yolo County to identify the priority land units to receive mitigation so as to most improve the ecosystem functionality within the County from the perspective of 29 special-status species of wildlife and plants. I used a hierarchically structured indicators approach to apply principles of landscape and ecosystem ecology, conservation biology, and local values in rating land units. I derived GIS maps to help guide the conservation area design, and then I developed implementation strategies.

Mountain Lion Track Count. I developed and conducted the carnivore monitoring program throughout California since 1985. Species counted include mountain lion, bobcat, black bear, coyote, red and gray fox, raccoon, striped skunk, badger, and black-tailed deer. Vegetation and land use are also monitored. The transect was established on dusty, dirt roads within randomly selected quadrats. These roads are searched for tracks of the carnivores, which routinely use the roads for travel paths.

Sumatran Tiger and other Felids. I designed and conducted track counts for seven species of wild cats in Sumatra, including the Sumatran tiger, fishing cat, and golden cat. I spent four months on Sumatra and Java, and learned Bahasa Indonesia (the official Indonesian language). I was awarded a Fulbright Research Fellowship to complete the project.

Wildlife in Agriculture. Beginning as my post-graduate research, I have studied pocket gophers and other wildlife in 40 alfalfa fields throughout the Sacramento Valley, and I surveyed for wildlife along a 200 mile road transect for six years. The data were analyzed using GIS and methods from landscape ecology, and the results were published and presented orally to farming groups in California and elsewhere. I also conducted the first study of wildlife in cover crops used on vineyards and orchards.

Agricultural Energy Use and Tulare County Groundwater Study. I developed and analyzed a data

base of energy use in California agriculture, and collaborated on a landscape (GIS) study of groundwater contamination across Tulare County, California.

Pocket Gopher Damage in Forest Clearcuts. I tested various poison baits and baiting regimes for pocket gopher control in forest plantations, and I developed gopher sampling methods. I conducted the most extensive field study of pocket gophers ever, involving thousands of gophers in 68 research plots on 55 clearcuts among 6 National Forests in northern California.

Risk Assessment of Exotic Species in North America. I developed empirical models of mammal and bird species invasions in North America, as well as a rating system for assigning priority research and control to exotic species in California, based on economic, environmental, and human health hazards.

Representative special-status species experience

Common name	Species name	Status¹	Description
Field experience			
California red-legged frog	<i>Rana aurora draytonii</i>	FT, CSC	Protocol searches & detected at multiple sites
Foothill yellow-legged frog	<i>Rana boylei</i>	FSC, CSC	Research and search detections at multiple sites
Western spadefoot	<i>Spea hammondi</i>	FSC, CSC	Searches and search detections
California tiger salamander	<i>Ambystoma californiense</i>	FC, CSC	Protocol searches & detections at multiple sites
Coast range newt	<i>Taricha torosa torosa</i>	CSC	Searches and multiple detections
Blunt-nosed leopard lizard	<i>Gambelia sila</i>	FE, CE	Detected in San Luis Obispo County
California Horned Lizard	<i>Phrynosoma coronatum frontale</i>	FSC, CSC	Search and detected in San Luis Obispo Co.
Western pond turtle	<i>Clemmys marmorata</i>	FSC, CSC	Searches and detected at multiple sites
San Joaquin kit fox	<i>Vulpes macrotis mutica</i>	FE, CT	Protocol searches and detections
Sumatran tiger	<i>Panthera tigris</i>		Research in Sumatra
Mountain lion	<i>Puma concolor californicus</i>	CFP	Research and publications
Point Arena mountain beaver	<i>Aplodontia rufa nigra</i>	FE, CSC	Remote camera operation
Giant kangaroo rat	<i>Dipodomys ingens</i>	FE, CE	Detected in Cholame Valley
Fresno kangaroo rat	<i>Dipodomys nitratoides</i>	FE, CE	Research and conservation at Lemoore Naval Air Station – reports
Monterey dusky-footed woodrat	<i>Neotoma fuscipes luciana</i>	FSC, CSC	Non-target captures and mapping of dens
Salt marsh harvest mouse	<i>Reithrodontomys raviventris</i>	FE, CE	Habitat assessment, monitoring
Salinas harvest mouse	<i>Reithrodontomys megalotus distichlus</i>	G5T1S1	Captures in the Salinas area; habitat assessment
California clapper rail	<i>Rallus longirostris</i>	FE, CE	Surveys at Concord Naval Weapons Station
Golden eagle	<i>Aquila chrysaetos</i>	CSC	Research in Sacramento Valley
Swainson's hawk	<i>Buteo swainsoni</i>	CT	Research in Sacramento Valley
Northern harrier	<i>Circus cyaneus</i>	CSC	Research and publication
White-tailed kite	<i>Elanus leucurus</i>	CFP	Research and publication
Loggerhead shrike	<i>Lanius ludovicianus</i>	FSC, CSC	Research in Sacramento Valley
Least Bell's vireo	<i>Vireo bellii pusillus</i>	FE, CE	Detected in Monterey County
Willow flycatcher	<i>Empidonax traillii extimus</i>	FE, CE	Research at Sierra Nevada breeding sites
Burrowing owl	<i>Athene cunicularia hypugia</i>	FSC, CSC	Research at multiple locations
Valley elderberry longhorn beetle	<i>Desmocerus californicus dimorphus</i>	FT	Research on mitigation site and publication
Analytical			
Arroyo southwestern toad	<i>Bufo microscaphus</i>	FE, CSC	Research and report.

	<i>californicus</i>		
Giant garter snake	<i>Thamnophis gigas</i>	FT, CE	Research and publication.
Northern goshawk	<i>Accipiter gentilis</i>	FSC, CSC	Research and publication.
Northern spotted owl	<i>Strix occidentalis</i>	FT	Research and reports. Publication in progress.

¹ FE = Federal Endangered, FT = Federal threatened, FC = Federal candidate for listing, FSC = Federal species of concern, CE = California Endangered, CT = California threatened, CFP = California Fully Protected, CSC = California Species of Concern, G5T1S1 = CNDDDB rating of imperiled throughout California range.

Comments on Environmental Documents

I was retained or commissioned to comment on environmental planning and review documents, including:

- Mount Signal and Calexico Solar Farm Projects DEIR (2011; 16 pp);
- City of Elk Grove Sphere of Influence EIR (2011; 28 pp);
- Comment on Sutter Landing Park Solar Photovoltaic Project MND (2011; 9 pp);
- Statement of Shawn Smallwood, Ph.D. Regarding Proposed Rabik/Gudath Project, 22611 Coleman Valley Road, Bodega Bay (CPN 10-0002) (2011; 4 pp);
- Declaration of K. Shawn Smallwood on Biological Impacts of the Ivanpah Solar Electric Generating System (ISEGS) (2011; 9 pp);
- Comments on Draft Eagle Conservation Plan Guidance (2011; 13 pp);
- Comments on Draft EIR/EA for Niles Canyon Safety Improvement Project (2011; 16 pp);
- Declaration of K. Shawn Smallwood, Ph.D., on Biological Impacts of the Route 84 Safety Improvement Project (2011; 7 pp);
- Rebuttal Testimony of Witness #22, K. Shawn Smallwood, Ph.D, on Behalf of Intervenors Friends of The Columbia Gorge and Save Our Scenic Area (2010; 6 pp);
- Prefiled Direct Testimony of Witness #22, K. Shawn Smallwood, Ph.D, on Behalf of Intervenors Friends of the Columbia Gorge and Save Our Scenic Area. Comments on Whistling Ridge Wind Energy Power Project DEIS, Skamania County, Washington (2010; 41 pp);
- Evaluation of Klickitat County’s Decisions on the Windy Flats West Wind Energy Project (2010; 17 pp);
- St. John's Church Project Draft Environmental Impact Report (2010; 14 pp.);
- Initial Study/Mitigated Negative Declaration for Results Radio Zone File #2009-001 (2010; 20 pp);
- Rio del Oro Specific Plan Project Final Environmental Impact Report (2010;12 pp);
- Answers to Questions on 33% RPS Implementation Analysis Preliminary Results Report (2009: 9 pp);
- SEPA Determination of Non-significance regarding zoning adjustments for Skamania County, Washington. Second Declaration to Friends of the Columbia Gorge, Inc. and Save Our Scenic Area (Dec 2008; 17 pp);
- Comments on Draft 1A Summary Report to CAISO (2008; 10 pp);
- Categorical Exemption of Hilton Manor Project, as determined by County of Placer (2009; 9 pp);
- Protest of CARE to Amendment to the Power Purchase and Sale Agreement for

- Procurement of Eligible Renewable Energy Resources Between Hatchet Ridge Wind LLC and PG&E (2009; 3 pp);
- Tehachapi Renewable Transmission Project EIR/EIS (2009; 142 pp);
 - Delta Shores Project EIR, south Sacramento (2009; 11 pp + addendum 2 pp);
 - Declaration of Shawn Smallwood in Support of Care's Petition to Modify D.07-09-040 (2008; 3 pp);
 - The Public Utility Commission's Implementation Analysis December 16 Workshop for the Governor's Executive Order S-14-08 to implement a 33% Renewable Portfolio Standard by 2020 (2008; 9 pp);
 - The Public Utility Commission's Implementation Analysis Draft Work Plan for the Governor's Executive Order S-14-08 to implement a 33% Renewable Portfolio Standard by 2020 (2008; 11 pp);
 - Draft 1A Summary Report to California Independent System Operator for Planning Reserve Margins (PRM) Study (2008; 7 pp.);
 - SEPA Determination of Non-significance regarding zoning adjustments for Skamania County, Washington. Declaration to Friends of the Columbia Gorge, Inc. and Save Our Scenic Area (Sep 2008; 16 pp);
 - California Energy Commission's Preliminary Staff Assessment of the Colusa Generating Station (2007; 24 pp);
 - Rio del Oro Specific Plan Project Recirculated Draft Environmental Impact Report (2008; 66 pp);
 - Replies to Response to Comments Re: Regional University Specific Plan Environmental Impact Report (2008; 20 pp);
 - Regional University Specific Plan Environmental Impact Report (2008; 33 pp.);
 - Clark Precast, LLC's "Sugarland" project, Negative Declaration (2008; 15 pp.);
 - Cape Wind Project Draft Environmental Impact Statement (2008; 157 pp.);
 - Yuba Highlands Specific Plan (or Area Plan) Environmental Impact Report (2006; 37 pp.);
 - Replies to responses to comments on Mitigated Negative Declaration of the proposed Mining Permit (MIN 04-01) and Modification of Use Permit 96-02 at North Table Mountain (2006; 5 pp);
 - Mitigated Negative Declaration of the proposed Mining Permit (MIN 04-01) and Modification of Use Permit 96-02 at North Table Mountain (2006; 15 pp);
 - Windy Point Wind Farm Environmental Review and EIS (2006; 14 pp and 36 Powerpoint slides in reply to responses to comments);
 - Shiloh I Wind Power Project EIR (2005; 18 pp);
 - Buena Vista Wind Energy Project Notice of Preparation of EIR (2004; 15 pp);
 - Negative Declaration of the proposed Callahan Estates Subdivision (2004; 11 pp);
 - Negative Declaration of the proposed Winters Highlands Subdivision (2004; 9 pp);
 - Negative Declaration of the proposed Winters Highlands Subdivision (2004; 13 pp);
 - Negative Declaration of the proposed Creekside Highlands Project, Tract 7270 (2004; 21 pp);
 - On the petition California Fish and Game Commission to list the Burrowing Owl as threatened or endangered (2003; 10 pp);
 - Conditional Use Permit renewals from Alameda County for wind turbine operations in the Altamont Pass Wind Resource Area (2003; 41 pp);
 - UC Davis Long Range Development Plan of 2003, particularly with regard to the

- Neighborhood Master Plan (2003; 23 pp);
- Anderson Marketplace Draft Environmental Impact Report (2003: 18 pp + 3 plates of photos);
- Negative Declaration of the proposed expansion of Temple B'nai Tikyah (2003: 6 pp);
- Antonio Mountain Ranch Specific Plan Public Draft EIR (2002: 23 pp);
- Response to testimony of experts at the East Altamont Energy Center evidentiary hearing on biological resources (2002: 9 pp);
- Revised Draft Environmental Impact Report, The Promenade (2002: 7 pp);
- Recirculated Initial Study for Calpine's proposed Pajaro Valley Energy Center (2002: 3 pp);
- UC Merced -- Declaration of Dr. Shawn Smallwood in support of petitioner's application for temporary restraining order and preliminary injunction (2002: 5 pp);
- Replies to response to comments in Final Environmental Impact Report, Atwood Ranch Unit III Subdivision (2003: 22 pp);
- Draft Environmental Impact Report, Atwood Ranch Unit III Subdivision (2002: 19 pp + 8 photos on 4 plates);
- California Energy Commission Staff Report on GWF Tracy Peaker Project (2002: 17 pp + 3 photos; follow-up report of 3 pp);
- Initial Study and Negative Declaration, Silver Bend Apartments, Placer County (2002: 13 pp);
- UC Merced Long-range Development Plan DEIR and UC Merced Community Plan DEIR (2001: 26 pp);
- Initial Study, Colusa County Power Plant (2001: 6 pp);
- Comments on Proposed Dog Park at Catlin Park, Folsom, California (2001: 5 pp + 4 photos);
- Pacific Lumber Co. (Headwaters) Habitat Conservation Plan and Environmental Impact Report (1998: 28 pp);
- Final Environmental Impact Report/Statement for Issuance of Take authorization for listed species within the MSCP planning area in San Diego County, California (Fed. Reg. 62 (60): 14938, San Diego Multi-Species Conservation Program) (1997: 10 pp);
- Permit (PRT-823773) Amendment for the Natomas Basin Habitat Conservation Plan, Sacramento, CA (Fed. Reg. 63 (101): 29020-29021) (1998);
- Draft Recovery Plan for the Giant Garter Snake (*Thamnophis gigas*). (Fed. Reg. 64(176): 49497-49498) (1999: 8 pp);
- Review of the Draft Recovery Plan for the Arroyo Southwestern Toad (*Bufo microscaphus californicus*) (1998);
- Ballona West Bluffs Project Environmental Impact Report (1999: oral presentation);
- California Board of Forestry's proposed amended Forest Practices Rules (1999);
- Negative Declaration for the Sunset Sky ranch Airport Use Permit (1999);
- Calpine and Bechtel Corporations' Biological Resources Implementation and Monitoring Program (BRMIMP) for the Metcalf Energy Center (2000: 10 pp);
- California Energy Commission's Final Staff Assessment of the proposed Metcalf Energy Center (2000);
- US Fish and Wildlife Service Section 7 consultation with the California Energy Commission regarding Calpine and Bechtel Corporations' Metcalf Energy Center (2000: 4 pp);
- California Energy Commission's Preliminary Staff Assessment of the proposed Metcalf Energy Center (2000: 11 pp);

- Site-specific management plans for the Natomas Basin Conservancy's mitigation lands, prepared by Wildlands, Inc. (2000: 7 pp);
- Affidavit of K. Shawn Smallwood in Spirit of the Sage Council, et al. (Plaintiffs) vs. Bruce Babbitt, Secretary, U.S. Department of the Interior, et al. (Defendants), Injuries caused by the No Surprises policy and final rule which codifies that policy (1999: 9 pp).

I also issued formal comments on the following documents:

- Draft Program Level EIR for Covell Village (2005; 19 pp);
- Bureau of Land Management Wind Energy Programmatic EIS Scoping document (2003: 7 pp.);
- NEPA Environmental Analysis for Biosafety Level 4 National Biocontainment Laboratory (NBL) at UC Davis (2003: 7 pp);
- Notice of Preparation of UC Merced Community and Area Plan EIR, on behalf of The Wildlife Society—Western Section (2001: 8 pp.);
- Preliminary Draft Yolo County Habitat Conservation Plan (2001; 2 letters totaling 35 pp.);
- Merced County General Plan Revision, notice of Negative Declaration (2001: 2 pp.);
- Notice of Preparation of Campus Parkway EIR/EIS (2001: 7 pp.);
- Draft Recovery Plan for the bighorn sheep in the Peninsular Range (*Ovis candensis*) (2000);
- Draft Recovery Plan for the California Red-legged Frog (*Rana aurora draytonii*), on behalf of The Wildlife Society—Western Section (2000: 10 pp.);
- Sierra Nevada Forest Plan Amendment Draft Environmental Impact Statement, on behalf of The Wildlife Society—Western Section (2000: 7 pp.);
- State Water Project Supplemental Water Purchase Program, Draft Program EIR (1997);
- Davis General Plan Update EIR (2000);
- Turn of the Century EIR (1999: 10 pp);
- Proposed termination of Critical Habitat Designation under the Endangered Species Act (Fed. Reg. 64(113): 31871-31874) (1999);
- NOA Draft Addendum to the Final Handbook for Habitat Conservation Planning and Incidental Take Permitting Process, termed the HCP 5-Point Policy Plan (Fed. Reg. 64(45): 11485 - 11490) (1999; 2 pp + attachments);
- Covell Center Project EIR and EIR Supplement (1997).

Position Statements I prepared the following position statements for the Western Section of The Wildlife Society, and one for nearly 200 scientists:

- Recommended that the California Department of Fish and Game prioritize the extermination of the introduced southern water snake in northern California. The Wildlife Society--Western Section (2001);
- Recommended that The Wildlife Society—Western Section appoint or recommend members of the independent scientific review panel for the UC Merced environmental review process (2001);
- Opposed the siting of the University of California's 10th campus on a sensitive vernal pool/grassland complex east of Merced. The Wildlife Society--Western Section (2000);
- Opposed the legalization of ferret ownership in California. The Wildlife Society--Western Section (2000);

- Opposed the Proposed “No Surprises,” “Safe Harbor,” and “Candidate Conservation Agreement” rules, including permit-shield protection provisions (Fed. Reg. Vol. 62, No. 103, pp. 29091-29098 and No. 113, pp. 32189-32194). This statement was signed by 188 scientists and went to the responsible federal agencies, as well as to the U.S. Senate and House of Representatives.

Presentations at Professional Meetings and Seminars

Comparing Wind Turbine Impacts across North America. California Energy Commission Staff Workshop: Reducing the Impacts of Energy Infrastructure on Wildlife, 20 July 2011.

Siting Repowered Wind Turbines to Minimize Raptor Collisions. California Energy Commission Staff Workshop: Reducing the Impacts of Energy Infrastructure on Wildlife, 20 July 2011.

Siting Repowered Wind Turbines to Minimize Raptor Collisions. Alameda County Scientific Review Committee meeting, 17 February 2011

Comparing Wind Turbine Impacts across North America. Conference on Wind energy and Wildlife impacts, Trondheim, Norway, 3 May 2011.

Update on Wildlife Impacts in the Altamont Pass Wind Resource Area. Raptor Symposium, The Wildlife Society—Western Section, Riverside, California, February 2011.

Siting Repowered Wind Turbines to Minimize Raptor Collisions. Raptor Symposium, The Wildlife Society—Western Section, Riverside, California, February 2011.

Wildlife mortality caused by wind turbine collisions. Ecological Society of America, Pittsburgh, Pennsylvania, 6 August 2010.

Map-based repowering and reorganization of a wind farm to minimize burrowing owl fatalities. California burrowing Owl Consortium Meeting, Livermore, California, 6 February 2010.

Environmental barriers to wind power. Getting Real About Renewables: Economic and Environmental Barriers to Biofuels and Wind Energy. A symposium sponsored by the Environmental & Energy Law & Policy Journal, University of Houston Law Center, Houston, 23 February 2007.

Lessons learned about bird collisions with wind turbines in the Altamont Pass and other US wind farms. Meeting with Japan Ministry of the Environment and Japan Ministry of the Economy, Wild Bird Society of Japan, and other NGOs Tokyo, Japan, 9 November 2006.

Lessons learned about bird collisions with wind turbines in the Altamont Pass and other US wind farms. Symposium on bird collisions with wind turbines. Wild Bird Society of Japan, Tokyo, Japan, 4 November 2006.

Responses of Fresno kangaroo rats to habitat improvements in an adaptive management framework. California Society for Ecological Restoration (SERCAL) 13th Annual Conference, UC Santa Barbara, 27 October 2006.

Fatality associations as the basis for predictive models of fatalities in the Altamont Pass Wind Resource Area. EEI/APLIC/PIER Workshop, 2006 Biologist Task Force and Avian Interaction with Electric Facilities Meeting, Pleasanton, California, 28 April 2006.

Burrowing owl burrows and wind turbine collisions in the Altamont Pass Wind Resource Area. The Wildlife Society—Western Section Annual Meeting, Sacramento, California, February 8, 2006.

Mitigation at wind farms. Workshop: Understanding and resolving bird and bat impacts. American Wind Energy Association and Audubon Society. Los Angeles, CA. January 10 and 11, 2006.

Incorporating data from the California Wildlife Habitat Relationships (CWHR) system into an impact assessment tool for birds near wind farms. Shawn Smallwood, Kevin Hunting, Marcus Yee, Linda Spiegel, Monica Parisi. Workshop: Understanding and resolving bird and bat impacts. American Wind Energy Association and Audubon Society. Los Angeles, CA. January 10 and 11, 2006.

Toward indicating threats to birds by California's new wind farms. California Energy Commission,

Sacramento, May 26, 2005.

Avian collisions in the Altamont Pass. California Energy Commission, Sacramento, May 26, 2005.

Ecological solutions for avian collisions with wind turbines in the Altamont Pass Wind Resource Area. EPRI Environmental Sector Council, Monterey, California, February 17, 2005.

Ecological solutions for avian collisions with wind turbines in the Altamont Pass Wind Resource Area. The Wildlife Society—Western Section Annual Meeting, Sacramento, California, January 19, 2005.

Associations between avian fatalities and attributes of electric distribution poles in California. The Wildlife Society—Western Section Annual Meeting, Sacramento, California, January 19, 2005.

Minimizing avian mortality in the Altamont Pass Wind Resources Area. UC Davis Wind Energy Collaborative Forum, Palm Springs, California, December 14, 2004.

Selecting electric distribution poles for priority retrofitting to reduce raptor mortality. Raptor Research Foundation Meeting, Bakersfield, California, November 10, 2004.

Responses of Fresno kangaroo rats to habitat improvements in an adaptive management framework. Annual Meeting of the Society for Ecological Restoration, South Lake Tahoe, California, October 16, 2004.

Lessons learned from five years of avian mortality research at the Altamont Pass Wind Resources Area in California. The Wildlife Society Annual Meeting, Calgary, Canada, September 2004.

The ecology and impacts of power generation at Altamont Pass. Sacramento Petroleum Association, Sacramento, California, August 18, 2004.

Burrowing owl mortality in the Altamont Pass Wind Resource Area. California Burrowing Owl Consortium meeting, Hayward, California, February 7, 2004.

Burrowing owl mortality in the Altamont Pass Wind Resource Area. California Burrowing Owl Symposium, Sacramento, November 2, 2003.

Raptor Mortality at the Altamont Pass Wind Resource Area. National Wind Coordinating Committee, Washington, D.C., November 17, 2003.

Raptor Behavior at the Altamont Pass Wind Resource Area. Annual Meeting of the Raptor Research Foundation, Anchorage, Alaska, September, 2003.

Raptor Mortality at the Altamont Pass Wind Resource Area. Annual Meeting of the Raptor Research Foundation, Anchorage, Alaska, September, 2003.

California mountain lions. Ecological & Environmental Issues Seminar, Department of Biology, California State University, Sacramento, November, 2000.

Intra- and inter-turbine string comparison of fatalities to animal burrow densities at Altamont Pass. National Wind Coordinating Committee, Carmel, California, May, 2000.

Using a Geographic Positioning System (GPS) to map wildlife and habitat. Annual Meeting of the Western Section of The Wildlife Society, Riverside, CA, January, 2000.

Suggested standards for science applied to conservation issues. Annual Meeting of the Western Section of The Wildlife Society, Riverside, CA, January, 2000.

The indicators framework applied to ecological restoration in Yolo County, California. Society for Ecological Restoration, September 25, 1999.

Ecological restoration in the context of animal social units and their habitat areas. Society for Ecological Restoration, September 24, 1999.

Relating Indicators of Ecological Health and Integrity to Assess Risks to Sustainable Agriculture and Native Biota. International Conference on Ecosystem Health, August 16, 1999.

A crosswalk from the Endangered Species Act to the HCP Handbook and real HCPs. Southern California Edison, Co. and California Energy Commission, March 4-5, 1999.

Mountain lion track counts in California: Implications for Management. Ecological & Environmental Issues Seminar, Department of Biological Sciences, California State University, Sacramento, November 4, 1998.

“No Surprises” -- Lack of science in the HCP process. California Native Plant Society Annual Conservation Conference, The Presidio, San Francisco, September 7, 1997.

In Your Interest. A half hour weekly show aired on Channel 10 Television, Sacramento. In this episode, I served on a panel of experts discussing problems with the implementation of the Endangered Species Act. Aired August 31, 1997.

Spatial scaling of pocket gopher (*Geomys*) density. Southwestern Association of Naturalists 44th Meeting, Fayetteville, Arkansas, April 10, 1997.

Estimating prairie dog and pocket gopher burrow volume. Southwestern Association of Naturalists 44th Meeting, Fayetteville, Arkansas, April 10, 1997.

Ten years of mountain lion track survey. Fifth Mountain Lion Workshop, San Diego, February 27, 1996.

Study and interpretive design effects on mountain lion density estimates. Fifth Mountain Lion Workshop, San Diego, February 27, 1996.

Small animal control. Session moderator and speaker at the California Farm Conference, Sacramento, California, Feb. 28, 1995.

Small animal control. Ecological Farming Conference, Asyloamar, California, Jan. 28, 1995.

Habitat associations of the Swainson's Hawk in the Sacramento Valley's agricultural landscape. 1994 Raptor Research Foundation Meeting, Flagstaff, Arizona.

Alfalfa as wildlife habitat. Seed Industry Conference, Woodland, California, May 4, 1994.

Habitats and vertebrate pests: impacts and management. Managing Farmland to Bring Back Game Birds and Wildlife to the Central Valley. Yolo County Resource Conservation District, U.C. Davis, February 19, 1994.

Management of gophers and alfalfa as wildlife habitat. Orland Alfalfa Production Meeting and Sacramento Valley Alfalfa Production Meeting, February 1 and 2, 1994.

Patterns of wildlife movement in a farming landscape. Wildlife and Fisheries Biology Seminar Series: Recent Advances in Wildlife, Fish, and Conservation Biology, U.C. Davis, Dec. 6, 1993.

Alfalfa as wildlife habitat. California Alfalfa Symposium, Fresno, California, Dec. 9, 1993.

Management of pocket gophers in Sacramento Valley alfalfa. California Alfalfa Symposium, Fresno, California, Dec. 8, 1993.

Association analysis of raptors in a farming landscape. Plenary speaker at Raptor Research Foundation Meeting, Charlotte, North Carolina, Nov. 6, 1993.

Landscape strategies for biological control and IPM. Plenary speaker, International Conference on Integrated Resource Management and Sustainable Agriculture, Beijing, China, Sept. 11, 1993.

Landscape Ecology Study of Pocket Gophers in Alfalfa. Alfalfa Field Day, U.C. Davis, July 1993.

Patterns of wildlife movement in a farming landscape. Spatial Data Analysis Colloquium, U.C. Davis, August 6, 1993.

Sound stewardship of wildlife. Veterinary Medicine Seminar: Ethics of Animal Use, U.C. Davis. May 1993.

SUBJECT: Comments on 550 Piercy Rd Warehouse Noise Analysis

Dear Ms. Rengifo,

Per your request, we have reviewed the subject matter document for the 550 Piercy Rd Warehouse Project Mitigated Negative Declaration (MND) in San Jose, California in Santa Clara County. The proposed project involves the construction, use and maintenance of two industrial buildings on a 28.9-acre single vacant parcel with a total square footage of 257,149 square feet for Building 1 and 172,851 square feet for Building 2. The Project is surrounded by noise sensitive uses, including a housing development located east of Tennant Avenue, approximately 845 feet east of the project site, existing industrial buildings directly to the west and existing residential buildings to the north across Piercy Road.

The Project's Noise Impacts May be Misrepresented

Appendix G of the MND outlines the noise analysis conducted for the project. While the use of "Noise Level Increase, DNL" as a significance threshold for noise impacts during project operations is reasonable and in line with the San Jose General Plan¹, the document does not define the ambient criteria at each receiver. It is essential to state the ambient sound level and associated criteria at each currently-existing receiver location so a comparison can be made between predicted noise levels and measured ambient levels.

Moreover, long-term measurements were taken during a noise monitoring survey at different locations, including LT-1, which is situated on the opposite side of Piercy Road from the residential properties north of the project. Given that there are no significant changes or alternate noise sources between LT-1 and the northern residences, it can be concluded that Piercy Rd is the primary noise source for both LT-1 and the receiver in question, although this data is not clearly presented.

However, inconsistencies arise. On one hand, it states that at LT-1, the "day-night average noise level on Thursday, July 7, 2022, was 62 dBA DNL" Additionally, in Table 14, the estimated future DNL is 61 dBA. Table 14 also states that this is 2 dB over the ambient levels. This implies an ambient level of 59 dBA, which is not included at all in the document, either in the discussion or in the ambient measurements. Considering that the threshold of significance is based on predicted noise from the

¹ <https://www.sanjoseca.gov/home/showpublisheddocument/22359/637928744399330000>

project over the existing ambient, using a misrepresented level could underestimate any potential noise impact.

To accurately discuss the noise impacts on the surrounding receivers, an EIR must provide sound levels at each sensitive receiver and explicitly disclose each calculated level and criteria at each location to ensure that the impacts analysis clearly evaluates noise level increase over ambient levels. All calculations should be included to determine any corrections or adjustments that may have been used, which is especially important in relation to setting the criteria.

Impact Analyses are Incorrect and Unsupported.

Construction Noise May be Significant

Appendix G states that the Federal Highway Administration's (FHWA's) Roadway Construction Noise Model (RCNM) was used to calculate the hourly average noise levels for each phase of construction, assuming the operation of the two loudest pieces of equipment simultaneously. This aligns with the Federal Transit Administration's (FTA) general assessment methodology presented in the Transit Noise and Vibration Impact Assessment Manual². Additionally, the document mentions that the construction noise model includes the approximate usage factors of such equipment (page 19-20).

However, it should be noted that the FTA methodology, during a general assessment, advises to assume a usage factor of 1 (100%). The usage factors are only utilized in the detailed assessment using FTA methodology, where worst-case distances are considered between the construction source and the property line. The general assessment is meant to be a quick check to see if more analysis is needed. Before worrying about measuring correct distances and multiplying usage factors, it's a simple to check to determine if construction noise will be a problem. But using this with usage factors greatly underestimates noise.

The document's approach of using the general assessment while incorporating usage factors significantly underestimates the potential impact of construction noise. Usage factors are defined as the percentage of time a piece of construction equipment is used during an hour. After breaks, adjustments, coordination, many pieces of loud construction equipment are only used 20-40% of the time. When using these with a general assessment, it then reduces and underestimates the amount of time of sound exposure by 60-80%.

This is particularly crucial given the large footprint of the property, where all receivers are situated more than 530 feet away from the geometric property center. Consequently, a general assessment might not be appropriate in this case.

For instance, if we consider the grading phase and use only the two loudest pieces of construction equipment (Excavator and Grader) with the proper usage factors at 70 feet, the predicted noise level is 84 dBA. This exceeds the provided threshold of 80 dBA, rendering the conclusion that "the temporary construction noise impact would be reduced to a less than significant level" incorrect. Therefore, it is essential to re-evaluate the analysis in an EIR and ensure that the analysis adheres to proper interpretation of FTA noise procedures and incorporating any applicable mitigation measures as necessary.

² https://www.transit.dot.gov/sites/fta.dot.gov/files/docs/research-innovation/118131/transit-noise-and-vibration-impact-assessment-manual-fta-report-no-0123_0.pdf, Page 177

Noise Source Data for Predictions is Unsupported

Several times through the document, noise levels are given for future operational sources. These include rooftop mechanical equipment (61 to 62 dBA at 20 feet), parking lot noise (40 to 50 Leq at 100 feet), truck engine noise (70 to 75 dBA Lmax at 50 feet), and truck back up alarms (65 to 75 Lmax at 50 feet). However, it is necessary to provide adequate support for these noise levels to ensure their acceptance as typical values for each equipment type.

For instance, a backup alarm can have an Lmax as high as 88 dBA at 50 feet³, which exceeds the levels used in the report by ten decibels. If this value is used instead of the one provided in Table 12 for the West Industrial receiver, the resultant noise level would be 67 dBA at 570 feet, with a DNL of 66 dBA (assuming a Leq-DNL correction factor of 1, as seems to be used throughout the report). This represents levels 7 dBA over the assumed ambient of 59 dBA DNL (extrapolating from the West Industrial Receiver in Table 10), which would result in a potentially significant noise impact that was undisclosed in the MND. Appendix G states that a “significant impact would occur if noise due to the proposed project would permanently increase ambient levels by 3 dBA DNL” (page 23). Consequently, the analysis needs to be redone in an EIR with accurately constructed noise levels to ensure all noise sources are properly accounted for.

Conclusions

There are several errors and omissions in the MND noise analysis. Correcting these would potentially identify several significant impacts which require mitigation.

Please feel free to contact me with any questions on this information.

Very truly yours,

Associate

Jack joined Wilson Ihrig in 2021 and is an experienced acoustics engineer with expertise in projects involving rail transit systems, highways, CEQA analysis, environmental noise reduction, mechanical drawing reviews, and construction noise and vibration mitigation. He has hands-on experience with project management, including client coordination and presentations, as well as in designing, developing, and testing MATLAB code used in acoustics applications. Additionally, his expertise includes taking field measurements, developing test plans and specifying, purchasing, setting up and repairing acoustic measurement equipment. He has experience in using Traffic Noise Model (TNM), CadnaA, EASE, Visual Basic, LabView, and CAD software.

Education

- B.S. in Mechanical Engineering, University of Southern California, Los Angeles, CA
-

Project Experience

Metro Regional Connector, Los Angeles CA

Planned, took, and processed measurements as part of a team to determine the effectiveness of floating slab trackwork for a new subway in downtown Los Angeles that travels below the Walt Disney Concert Hall and the Colburn School of Music.

Rodeo Credit Enterprise CEQA Analysis for New Construction, Palmdale, CA

Wrote an accepted proposal and executed it for a noise study project to determine noise mitigation requirements on a new housing development. Led all aspects of the project and managed the budget during all phases of project completion. Completed 5 separate projects of this type for this developer.

Blackhall Studios, Santa Clarita, CA

Led the vibration measurement effort for a new soundstage directly adjacent to an existing freight and commuter rail line. Tested equipment, processed data, and analyzed results to determine the vibration propagation through the soil to the proposed soundstage locations, and was part of the team that developed mitigation techniques for the office spaces directly next to the rail line.

Octavia Residential Condos CEQA Study, San Francisco, CA

Calculated the STC ratings for the proposed windows to meet Title 24 requirements, modeled the acoustic performance of floor and ceiling structures, researched noise codes, helped with a mechanical design review, and wrote a report summarizing the results for a new Condominium project being developed in San Francisco.

San Diego International Airport Terminal I Replacement, CA

Conducted interior noise and vibration measurements, analyzed measurement data to help determine project criteria, modeled the existing and future terminals in CadnaA, and was part of a team that did a complete HVAC analysis of the entire terminal, as part of a CEQA analysis where a new terminal for the airport is being designed.

Five Points Apartments Noise Study, Whittier, CA

Took measurements, researched sound data and solutions, and recommended mitigation for a new apartment complex that was located next to an existing car wash, as part of a CEQA review.

USC Ellison Vibration Survey, Los Angeles, CA

Conducted vibration measurements as part of a survey to determine the effectiveness of vibration isolation platforms that are used to insulate cell growth in a cancer research facility. Determined the effectiveness and presented this information to the client. Researched and recommended a permanent monitoring system so the client could view data in real time.

TEN50 Condos 'Popping' Noise Investigation, Los Angeles, CA

Was part of a team that investigated the noise source of an unwanted popping noise in luxury condos in Downtown Los Angeles. Helped isolate the noise source location with accelerometers to determine where vibrations were occurring first and used an acoustic camera to determine where in the condo the noise was coming from.

2000 University Project, Berkely, CA

Wrote a construction noise monitoring plan based on environmental noise calculations, wrote a report summarizing the results, and attending a meeting with the client to discuss options.

Bay Area Rapid Transit (BART) On-Track, CA, San Francisco Bay Area, CA*

Day to day project manager, responsible for meetings, presentations, and coordination with the client for an ongoing noise study on the BART system. Developed MATLAB code to process measurements and determine areas where high corrugation was present, contributing to excessively high in-car noise levels. Performed noise measurements inside both the right of way and the vehicle cabin, in addition to rail corrugation measurements.

California I-605/SR-60 Interchange Improvement, Los Angeles, CA*

Developed a noise model of the area that predicted sound levels for abatement design, in addition to conducting noise measurements and analysis. Led the Team in use of the FHWA Traffic Noise Model Software for the project, involving three major highways and two busy interchanges extending over 17 miles in southern California.

Sound Transit On-Track, Seattle, WA*

Took measurements, fixed equipment, and developed software in MATLAB to process Corrugation Analysis Trolley measurements as part of an ongoing noise study on the Sound Transit Link system. Tested vibration data to determine the best measurement and processing techniques to store the data in an online database for in-car measurements.

LA Metro CRRC Railcar Testing, Los Angeles, CA*

Led the effort to plan the measurements, determine measurement locations and finalize the test plan. Formulated a method to capture speed data directly from legacy train vehicles. Executed noise and vibration specification measurements for new rail cars delivered by CRRC.

City of Los Angeles, Pershing Square Station Rehabilitation Noise Monitoring, CA*

Built noise models, wrote a construction noise plan, and assisted in on-site construction noise issues as they arose for a renovation of the Pershing Square metro station in downtown Los

Angeles. Trained construction personnel in techniques for noise reduction and how to conduct noise monitoring measurements to meet project specifications.

City of Orange Metrolink Parking Garage Construction Monitoring, CA*

Wrote an adaptive management vibration monitoring plan, set up equipment to monitor live vibration levels, and generated weekly reports as part of an effort to build a new parking garage. Designed, planned, and completed measurements to predict and mitigate pile driving construction impacts at three historic building locations adjacent to the construction site. Coordinated with the client whenever an on-site problem arose.

LA Metro Westside Subway Construction, Los Angeles, CA*

Planned, organized, and processed noise measurements for the Purple Line extension construction. Implemented both long term microphones to measure noise levels and accelerometers to measure vibration levels in existing subway tunnels. Oversaw noise monitoring at sensitive construction sites for the project and worked with the contractor to find ways to reduce construction noise levels by approximately 10dB.

Montreal Réseau Express Métropolitain, Canada*

Conducted vibration propagation measurements used to create models to predict operational vibration levels for an under-construction transit line. Managed equipment, solved problems in the field, and wrote parts of the report summarizing the findings of the acoustic study.

NHCRP Barrier*

Took on-highway measurements and wrote, designed, developed, and tested MATLAB code to identify specific spectrograms to use for analyses for a project evaluating barrier reflected highway traffic noise differences in the presence of a single absorptive or reflective noise barrier.

Siemens Railcar Testing for Sound Transit, Seattle, WA*

Measured in-car noise and vibration for new rail cars delivered by Siemens. Developed new internal techniques for measurements based on the written specifications. Contributed to the team that helped identify issues that new cars had in meeting the Sound Transit specifications for noise and vibration. Participated in developing the test plan and specified then acquired new equipment for the measurement.

Toronto/Ontario Eglinton Crosstown Light Rail, Final Design, Canada*

Assisted in vibration propagation measurements, analysis, and recommendations for mitigation for a 12-mile light-rail line both on and under Eglinton Avenue. Set up and ran equipment for at-grade measurements with an impact hammer for underground measurements with an impact load cell that was used during pre-construction borehole drilling.

Subject: Warehouse Deveopment Hellyer/Piercy/Tennant Ave

Some people who received this message don't often get email from [REDACTED] [Learn why this is important](#)

[External Email]

Hello Rina,
We attended the zoom meeting a couple of weeks ago. Our home is [REDACTED] directly next to Tennant Avenue and across from the parcel of land close to Tennant. Our home's view of the horizon and the scenery will definitely be changed.
In the notice posted on the fence we saw that there was an entrance/exit planned from Tennant Avenue. That would make it very difficult for the traffic on Tennant. It is such a short street. In addition to auto and trucks bikers use Piercy lane and Hellyer a lot.
Our concerns are the following:
Increased truck traffic, increased auto traffic by employees in the warehouses, increased noise pollution and environmental pollution as well.
Please consider the following:

- 1) No entrance to property on Tennant Avenue. All trucks to enter/exit off of Hellyer Avenue only. No truck traffic on Tennant Ave or Piercy Road.
- . 2) Hellyer & Piercy Road frontage improvements to include planting of dense street trees to help reduce noise and hide the building.
- 3) Require bike lane on Piercy Road and Tennant Ave.
- 4) Piercy Road and Tennant Avenue to have physical barriers to eliminate chances of large trucks / trailers from parking on the street. Street signage is not sufficient. Existing adjacent site (Golden Brands distribution)

has large trucks / trailers parking on Piercy Road frequently despite "no stopping" signage. Piercy Road is not wide enough to have vehicles parked and two-way traffic.

5) Operational hours need to comply with applicable noise ordinances for residential areas.

6) Perimeter fencing around the site to be strong (no chain link)

7) **Construction should be allowed only during reasonable daytime hours- Say 7.00 AM to 3,00 PM and night time construction work should not be permitted.**

8) The building should be one story and not higher than 40 feet. Max 50 feet.

Please keep us informed of further meetings and changes to the development.

Thank you,

Ram and Usha Chandra

RE: City of San Jose's 550 Piercy Road Industrial Development (SCH#: 2023060249)

Dear Tina Garg,

On behalf of the Carpenters Local Union 405 (“**Local 405**”), our Office is submitting these comments on the Initial Study and Mitigated Negative Declaration (“**IS/MND**”) for the City of San Jose’s (“**City**”) 550 Piercy Road Industrial Development Project (“**Project**”).

Per the City’s description, including in the Notice of Intent to Adopt the MND:

“The project application is for a Site Development Permit and Vesting Tentative Map to allow the **construction** of **two industrial** buildings on a **28.9-acre** single **vacant** parcel located at 550 Piercy Road in San José, California. The **total** square footage of the proposed industrial buildings would be **430,000 square feet**, with **257,149 square feet** for **Building 1** and **172,851 square feet** for **Building 2**. **Additional improvements** for **site circulation, site access, drainage, and infrastructure** are included in the proposed project.”¹ (Emph. added.)

¹ See, <https://www.sanjoseca.gov/your-government/departments-offices/planning-building-code-enforcement/planning-division/environmental-planning/environmental-review/negative-declaration-initial-studies/h22-015-550-piercy-rd-industrial-development-project>; see also the NOI, available at: <https://www.sanjoseca.gov/home/showpublisheddocument/99164/638218069370970000>

Local 405 is a labor union that represents over 4,000 members who live and work in Santa Clara County and has a strong interest in well-ordered land use planning and in addressing the environmental impacts of development projects.

Individual members of Local 405 live, work, and recreate in the City and surrounding communities and would be directly affected by the Project's environmental impacts.

Local 405 expressly reserves the right to supplement these comments at or prior to hearings on the Project, and at any later hearing and proceeding related to this Project. Gov. Code, § 65009, subd. (b); Pub. Res. Code, § 21177, subd. (a); see *Bakersfield Citizens for Local Control v. Bakersfield* (2004) 124 Cal.App.4th 1184, 1199-1203; see also *Galante Vineyards v. Monterey Water Dist.* (1997) 60 Cal.App.4th 1109, 1121.

Local 405 incorporates by reference all comments related to the Project or its CEQA review, including the Initial Study/Mitigated Negative Declaration. See *Citizens for Clean Energy v City of Woodland* (2014) 225 Cal.App.4th 173, 191 (finding that any party who has objected to the project's environmental documentation may assert any issue timely raised by other parties).

Moreover, Local 405 requests that the City provide **advance notice** of any upcoming hearings, as well as for any and all notices referring or related to the Project, as required by the Municipal Code, as well as under the California Environmental Quality Act (**CEQA**) (Pub. Res. Code, § 21000 *et seq.*), and the California Planning and Zoning Law ("**Planning and Zoning Law**") (Gov. Code, §§ 65000–65010). California Public Resources Code Sections 21092.2, and 21167(f) and California Government Code Section 65092 require agencies to mail such notices to any person who has filed a written request for them with the clerk of the agency's governing body. We request that such notice be *both* mailed and e-mailed to us.

I. **THE CITY SHOULD REQUIRE THE USE OF A LOCAL WORKFORCE TO BENEFIT THE COMMUNITY'S ECONOMIC DEVELOPMENT AND ENVIRONMENT.**

The City should require the Project to be built by contractors who participate in a Joint Labor-Management Apprenticeship Program approved by the State of California and make a commitment to hiring a local workforce.

Community benefits such as local hire can also be helpful to reduce environmental impacts and improve the positive economic impact of the Project. Local hire provisions requiring that a certain percentage of workers reside within 10 miles or less

F-2

F-3

of the Project site can reduce the length of vendor trips, reduce greenhouse gas emissions, and provide localized economic benefits. As environmental consultants Matt Hagemann and Paul E. Rosenfeld note:

[A]ny local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

March 8, 2021, SWAPE Letter to Mitchell M. Tsai re Local Hire Requirements and Considerations for Greenhouse Gas Modeling.

Workforce requirements promote the development of skilled trades that yield sustainable economic development. As the California Workforce Development Board and the University of California, Berkeley Center for Labor Research and Education concluded:

[L]abor should be considered an investment rather than a cost—and investments in growing, diversifying, and upskilling California’s workforce can positively affect returns on climate mitigation efforts. In other words, well-trained workers are key to delivering emissions reductions and moving California closer to its climate targets.²

Furthermore, workforce policies have significant environmental benefits given that they improve an area’s jobs-housing balance, decreasing the amount and length of job commutes and the associated greenhouse gas (GHG) emissions. In fact, on May 7, 2021, the South Coast Air Quality Management District found that that the “[u]se of a local state-certified apprenticeship program” can result in air pollutant reductions.³

² California Workforce Development Board (2020) Putting California on the High Road: A Jobs and Climate Action Plan for 2030 at p. ii, *available at* <https://laborcenter.berkeley.edu/wp-content/uploads/2020/09/Putting-California-on-the-High-Road.pdf>.

³ South Coast Air Quality Management District (May 7, 2021) Certify Final Environmental Assessment and Adopt Proposed Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions Program, and Proposed Rule 316 – Fees for Rule 2305, Submit Rule 2305 for Inclusion Into the SIP, and Approve Supporting Budget Actions, *available at* <http://www.aqmd.gov/docs/default-source/Agendas/Governing-Board/2021/2021-May7-027.pdf?sfvrsn=10>.

Locating jobs closer to residential areas can have significant environmental benefits. As the California Planning Roundtable noted in 2008:

People who live and work in the same jurisdiction would be more likely to take transit, walk, or bicycle to work than residents of less balanced communities and their vehicle trips would be shorter. Benefits would include potential reductions in both vehicle miles traveled and vehicle hours traveled.⁴

Moreover, local hire mandates and skill-training are critical facets of a strategy to reduce vehicle miles traveled (VMT). As planning experts Robert Cervero and Michael Duncan have noted, simply placing jobs near housing stock is insufficient to achieve VMT reductions given that the skill requirements of available local jobs must match those held by local residents.⁵ Some municipalities have even tied local hire and other workforce policies to local development permits to address transportation issues. Cervero and Duncan note that:

In nearly built-out Berkeley, CA, the approach to balancing jobs and housing is to create local jobs rather than to develop new housing. The city's First Source program encourages businesses to hire local residents, especially for entry- and intermediate-level jobs, and sponsors vocational training to ensure residents are employment-ready. While the program is voluntary, some 300 businesses have used it to date, placing more than 3,000 city residents in local jobs since it was launched in 1986. When needed, these carrots are matched by sticks, since the city is not shy about negotiating corporate participation in First Source as a condition of approval for development permits.

Recently, the State of California verified its commitment towards workforce development through the Affordable Housing and High Road Jobs Act of 2022, otherwise known as Assembly Bill No. 2011 (“**AB2011**”). AB2011 amended the

⁴ California Planning Roundtable (2008) Deconstructing Jobs-Housing Balance at p. 6, available at <https://cproundtable.org/static/media/uploads/publications/cpr-jobs-housing.pdf>

⁵ Cervero, Robert and Duncan, Michael (2006) Which Reduces Vehicle Travel More: Jobs-Housing Balance or Retail-Housing Mixing? Journal of the American Planning Association 72 (4), 475-490, 482, available at <http://reconnectingamerica.org/assets/Uploads/UTCT-825.pdf>.

Planning and Zoning Law to allow ministerial, by-right approval for projects being built alongside commercial corridors that meet affordability and labor requirements.

The City should consider utilizing local workforce policies and requirements to benefit the local area economically and to mitigate greenhouse gas, improve air quality, and reduce transportation impacts.

Cont'

II. THE PROJECT WOULD BE APPROVED IN VIOLATION OF THE CALIFORNIA ENVIRONMENTAL QUALITY ACT

A. Background Concerning the California Environmental Quality Act

The California Environmental Quality Act is a California statute designed to inform decision-makers and the public about the potential significant environmental effects of a project. 14 California Code of Regulations (“**CEQA Guidelines**”), § 15002, subd. (a)(1).⁶ At its core, its purpose is to “inform the public and its responsible officials of the environmental consequences of their decisions *before* they are made.” *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 564.

1. *Background Concerning Environmental Impact Reports*

CEQA directs public agencies to avoid or reduce environmental damage, when possible, by requiring alternatives or mitigation measures. CEQA Guidelines, § 15002, subds. (a)(2)-(3); see also *Berkeley Keep Jets Over the Bay Committee v. Board of Port Comes* (2001) 91 Cal.App.4th 1344, 1354; *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553; *Laurel Heights Improvement Assn.*, 47 Cal.3d at p. 400. The EIR serves to provide public agencies and the public in general with information about the effect that a proposed project is likely to have on the environment and to “identify ways that environmental damage can be avoided or significantly reduced.” CEQA Guidelines, § 15002, subd. (a)(2). If the project has a significant effect on the environment, the agency may approve the project only upon finding that it has “eliminated or substantially lessened all significant effects on the environment where feasible” and that any unavoidable significant effects on the environment are

F-5

⁶ The CEQA Guidelines, codified in Title 14 of the California Code of Regulations, section 15000 et seq., are regulatory guidelines promulgated by the state Natural Resources Agency for the implementation of CEQA. Cal. Pub. Res. Code, § 21083. The CEQA Guidelines are given “great weight in interpreting CEQA except when . . . clearly unauthorized or erroneous.” *Center for Biological Diversity v. Dept. of Fish & Wildlife* (2015) 62 Cal.4th 204, 217.

“acceptable due to overriding concerns” specified in Public Resources Code section 21081. See CEQA Guidelines, § 15092, subds. (b)(2)(A)-(B).

While the courts review an EIR using an ‘abuse of discretion’ standard, the reviewing court is not to *uncritically* rely on every study or analysis presented by a project proponent in support of its position. *Berkeley Jets*, 91 Cal.App.4th at p. 1355 (quoting *Laurel Heights Improvement Assn.*, 47 Cal.3d at pp. 391, 409 fn. 12) (internal quotations omitted). A clearly inadequate or unsupported study is entitled to no judicial deference. *Id.* Drawing this line and determining whether the EIR complies with CEQA’s information disclosure requirements presents a question of law subject to independent review by the courts. *Sierra Club v. County of Fresno* (2018) 6 Cal.5th 502, 515; *Madera Oversight Coalition, Inc. v. County of Madera* (2011) 199 Cal.App.4th 48, 102, 131. As the court stated in *Berkeley Jets*, prejudicial abuse of discretion occurs if the failure to include relevant information precludes informed decision-making and informed public participation, thereby thwarting the statutory goals of the EIR process. 91 Cal.App.4th at p. 1355 (internal quotations omitted).

The preparation and circulation of an EIR is more than a set of technical hurdles for agencies and developers to overcome. *Communities for a Better Environment v. Richmond* (2010) 184 Cal.App.4th 70, 80 (quoting *Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova* (2007) 40 Cal.4th 412, 449-450). The EIR’s function is to ensure that government officials who decide to build or approve a project do so with a full understanding of the environmental consequences and, equally important, that the public is assured those consequences have been considered. *Id.* For the EIR to serve these goals it must present information so that the foreseeable impacts of pursuing the project can be understood and weighed, and the public must be given an adequate opportunity to comment on that presentation before the decision to go forward is made. *Id.*

A strong presumption in favor of requiring preparation of an EIR is built into CEQA. This presumption is reflected in what is known as the “fair argument” standard under which an EIR must be prepared whenever substantial evidence in the record supports a fair argument that a project may have a significant effect on the environment. *Quail Botanical Gardens Found., Inc. v. City of Encinitas* (1994) 29 Cal.App.4th 1597, 1602; *Friends of “B” St. v. City of Hayward* (1980) 106 Cal.3d 988, 1002.

The fair argument test stems from the statutory mandate that an EIR be prepared for any project that “may have a significant effect on the environment.” PRC, § 21151;

F-5
Cont'

see *No Oil, Inc. v. City of Los Angeles* (1974) 13 Cal.App.3d 68, 75; accord *Jensen v. City of Santa Rosa* (2018) 23 Cal.App.5th 877, 884. Under this test, if a proposed project is not exempt and may cause a significant effect on the environment, the lead agency must prepare an EIR. PRC, §§ 21100 (a), 21151; CEQA Guidelines, § 15064 (a)(1), (f)(1). An EIR may be dispensed with only if the lead agency finds no substantial evidence in the initial study or elsewhere in the record that the project may have a significant effect on the environment. *Parker Shattuck Neighbors v. Berkeley City Council* (2013) 222 Cal.App.4th 768, 785. In such a situation, the agency must adopt a negative declaration. PRC, § 21080, subd. (c)(1); CEQA Guidelines, §§ 15063 (b)(2), 15064(f)(3).

“Significant effect upon the environment” is defined as “a substantial or potentially substantial adverse change in the environment.” PRC, § 21068; CEQA Guidelines, § 15382. A project may have a significant effect on the environment if there is a reasonable probability that it will result in a significant impact. *No Oil, Inc.*, 13 Cal.3d at p. 83 fn. 16; see *Sundstrom v. County of Mendocino* (1988) 202 Cal.App.3d 296, 309. If any aspect of the project may result in a significant impact on the environment, an EIR must be prepared even if the overall effect of the project is beneficial. CEQA Guidelines, § 15063(b)(1); see *County Sanitation Dist. No. 2 v. County of Kern* (2005) 127 Cal.App.4th 1544, 1580.

This standard sets a “low threshold” for preparation of an EIR. *Consolidated Irrigation Dist. v. City of Selma* (2012) 204 Cal.App.4th 187, 207; *Nelson v. County of Kern* (2010) 190 Cal.App.4th 252; *Pocket Protectors v. City of Sacramento* (2004) 124 Cal.App.4th 903, 928; *Bowman v. City of Berkeley* (2004) 122 Cal.App.4th 572, 580; *Citizen Action to Serve All Students v. Thornley* (1990) 222 Cal.App.3d 748, 754; *Sundstrom*, 202 Cal.App.3d at p. 310. If substantial evidence in the record supports a fair argument that the project may have a significant environmental effect, the lead agency must prepare an EIR even if other substantial evidence before it indicates the project will have no significant effect. See *Jensen*, 23 Cal.App.5th at p. 886; *Clews Land & Livestock v. City of San Diego* (2017) 19 Cal.App.5th 161, 183; *Stanislaus Audubon Society, Inc. v. County of Stanislaus* (1995) 33 Cal.App.4th 144, 150; *Brentwood Assn. for No Drilling, Inc. v. City of Los Angeles* (1982) 134 Cal.App.3d 491; *Friends of “B” St.*, 106 Cal.App.3d 988; CEQA Guidelines, § 15064(f)(1).

F-5
Con't

2. *Background Concerning Initial Studies, Negative Declarations and Mitigated Negative Declarations*

CEQA and CEQA Guidelines are strict and unambiguous about when an MND may be used. A public agency must prepare an EIR whenever substantial evidence supports a “fair argument” that a proposed project “may have a significant effect on the environment.” Pub. Res. Code, §§ 21100, 21151; CEQA Guidelines, §§ 15002, subds. (f)(1)-(2), 15063; *No Oil, Inc.*, 13 Cal.3d at p. 75; *Communities for a Better Environment v. California Resources Agency* (2002) 103 Cal.App.4th 98, 111-112.

Essentially, should a lead agency be presented with a fair argument that a project may have a significant effect on the environment, the lead agency shall prepare an EIR even though it may also be presented with other substantial evidence that the project will not have a significant effect. CEQA Guidelines, §§ 15064, subds. (f)(1)-(2); see *No Oil Inc.*, *supra*, 13 Cal.3d at p. 75 (internal citations and quotations omitted). Substantial evidence includes “enough relevant information and reasonable inferences from this information that a fair argument can be made to support a conclusion, even though other conclusions might also be reached.” CEQA Guidelines, § 15384(a).

The fair argument standard is a “low threshold” test for requiring the preparation of an EIR. *No Oil Inc.*, *supra*, 13 Cal.3d at p. 84; *County Sanitation Dist. No. 2 of Los Angeles County v. County of Kern* (2005) 127 Cal.App.4th 1544, 1579. It “requires the preparation of an EIR where there is substantial evidence that any aspect of the project, either individually or cumulatively, may cause a significant effect on the environment, regardless of whether the overall effect of the project is adverse or beneficial[.]” *County Sanitation*, *supra*, 127 Cal.App.4th at p. 1580 (quoting CEQA Guidelines, § 15063(b)(1)). A lead agency may adopt an MND only if “there is no substantial evidence that the project will have a significant effect on the environment.” CEQA Guidelines, § 15074(b).

Evidence supporting a fair argument of a significant environmental impact triggers preparation of an EIR regardless of whether the record contains contrary evidence. *League for Protection of Oakland’s Architectural and Historical Resources v. City of Oakland* (1997) 52 Cal.App.4th 896, 904-905. “Where the question is the sufficiency of the evidence to support a fair argument, deference to the agency’s determination is not appropriate[.]” *County Sanitation*, 127 Cal.App.4th at 1579 (quoting *Sierra Club v. County of Sonoma* (1992) 6 Cal.App.4th 1307, 1317-1318).

F-5
Con't

Further, it is the duty of the lead agency, not the public, to conduct the proper environmental studies. “The agency should not be allowed to hide behind its own failure to gather relevant data.” *Sundstrom*, 202 Cal.App.3d at p. 311. “Deficiencies in the record may actually enlarge the scope of fair argument by lending a logical plausibility to a wider range of inferences.” *Id*; see also *Gentry v. City of Murrieta* (1995) 36 Cal.App.4th 1359, 1382 (lack of study enlarges the scope of the fair argument which may be made based on the limited facts in the record).

Thus, refusal to complete recommended studies lowers the already low threshold to establish a fair argument. The court may not exercise its independent judgment on the omitted material by determining whether the ultimate decision of the lead agency would have been affected had the law been followed. *Environmental Protection Information Center v. Cal. Dept. of Forestry* (2008) 44 Cal.4th 459, 486 (internal citations and quotations omitted). The remedy for this deficiency would be for the trial court to issue a writ of mandate. *Id*.

Both the review for failure to follow CEQA’s procedures and the fair argument test are questions of law, thus, the de novo standard of review applies. *Vineyard Area Citizens for Responsible Growth v. City of Rancho Cordova* (2007) 40 Cal.4th 412, 435.

“Whether the agency’s record contains substantial evidence that would support a fair argument that the project may have a significant effect on the environment is treated as a question of law. *Consolidated Irrigation Dist.*, 204 Cal.App.4th at p. 207; Kostka and Zischke, *Practice Under the Environmental Quality Act* (2017, 2d ed.) at § 6.76.

In an MND context, courts give no deference to the agency. Additionally, the agency or the court should not weigh expert testimony or decide on the credibility of such evidence—this is one of the EIR’s functions. As stated in *Pocket Protectors v. City of Sacramento*:

Unlike the situation where an EIR has been prepared, neither the lead agency nor a court may “weigh” conflicting substantial evidence to determine whether an EIR must be prepared in the first instance. Guidelines section 15064, subdivision (f)(1) provides in pertinent part: if a lead agency is presented with a fair argument that a project may have a significant effect on the environment, the lead agency shall prepare an EIR even though it may also be presented with other substantial evidence that the project will not have a significant effect. Thus, as *Claremont* itself

recognized, [c]onsideration is not to be given contrary evidence supporting the preparation of a negative declaration.

(2004) 124 Cal.App.4th 903, 935 (internal citations and quotations omitted).

In cases where it is not clear whether there is substantial evidence of significant environmental impacts, CEQA requires erring on the side of a “preference for resolving doubts in favor of environmental review.” *Mejia v. City of Los Angeles* (2005) 130 Cal.App.4th 322, 332. “The foremost principle under CEQA is that the Legislature intended the act to be interpreted in such manner as to afford the fullest possible protection to the environment within the reasonable scope of the statutory language. *Friends of Mammoth v. Board of Supervisors* (1972) 8 Cal.3d 247, 259.

B. There Is a Fair Argument that the Project May Have a Significant Traffic Impact

The very nature of the Project, with its substantial proposed construction of two (2) industrial buildings on a 28.9-acre single vacant parcel⁷ indicates that the Project may have significant and severe traffic impacts, thus requiring an Environmental Impact Report. This is further supported by the fact that the Project will generate an estimated 1,989 net daily trips per the Institute of Transportation Engineers (“ITE”) Trip Generation Manual, 10th Edition (2017).⁸

Furthermore, the IS/MND acknowledges that the Project’s daily Vehicle Miles Traveled (“VMT”) would be 14.69 per worker, which is above the City’s VMT Evaluation Tool’s 14.37 daily-VMT-per-worker industrial threshold:

“Impact TR-1: The project daily Vehicle Miles Travelled (VMT) generated by the project would be 14.69 per worker, which exceeds the City of San José VMT Evaluation Tool’s industrial threshold of 14.37 daily VMT per worker.”⁹

Thus, the IS/MND admits that the project’s generated VMT would exceed the significance threshold for industrial employment and therefore result in a significant transportation impact on VMT.¹⁰

⁷ City of San Jose, Initial Study / Mitigated Negative Declaration (June 2023), p. 1.

⁸ *Id.* at pp. 173-175.

⁹ *Id.* at pp. 1 & 168.

¹⁰ *Id.*

F-5
Cont

F-6

To dispose with an EIR, the IS/MND relies on mitigation measure MM TR-1.1 to support its conclusion that the Project would have a less than significant impact with mitigation incorporated as it pertains to CEQA Guidelines Section 15064.3 and its required VMT evaluation of a project's transportation impacts.¹¹ Yet, the mitigation measure MM TR-1.1 is inadequate for an EIR, since it is unenforceable, illusory, and infeasible. It also improperly delegates the City's duty to ensure the reduction of traffic impacts to the Project's Applicant and further improperly delegates the approval of any traffic mitigation plans to the City's Public Works department, rather than the elected decisionmakers. MM TR-1.1 also improperly defers mitigation.

Specifically, mitigation measure MM TR-1.1 states, in full:

“ MM TR-1.1: **Prior to the issuance** of any grading or building permits, the project **applicant** shall prepare **plans** that **illustrate** the **design** of the site enhancements, and shall coordinate with the City's Department of Parks, Recreation, & Neighborhood Services, Department of Transportation, and the Department of Public Works to incorporate the following:

- **Traffic Calming Measures and Bike Access Improvements.** The project development shall include **narrowing** of the **existing roadway lane widths** along **Silicon Valley Boulevard** to implement Class IV **protected bikeways** in **both directions** between **Hellyer Avenue** and **Eden Park Place**. The project also includes the **installation** of the **on-street Class IV bikeway** per City standards along the **project's frontage** along **Hellyer Avenue**. The **bike lanes would** connect the existing Coyote Creek Trailheads and **encourage** the **use** of **bicycles** (see Appendix H, Figure 6 for conceptual designs of the planned improvements).
- **Pedestrian Network Improvements.** The **pork-chop island** on the southwest corner at the **Hellyer Avenue** and **Silicon Valley Boulevard** intersection shall be **removed** (see Appendix H, Figure 6). The improvement shall require **tightening** the **corner radius** at the **southeast** corner and **modifying** the **signal** to accommodate **pork chop island removals**. This shall improve the **multi-modal environment** by eliminating unsignalized pedestrian/vehicle conflict points, increasing

¹¹ *Id.* at pp. 166, 168.

F-6
Con't

visibility of pedestrians at the intersection corner, and providing a **safer refuge** for **pedestrians waiting** to use the **crosswalks**. **Final plans** shall be **submitted** and **reviewed** as part of the Public Improvement Plan submitted to the City of San Jose Public Works **prior** to the **issuance of development permits** for the proposed project. Per City specifications, the **Public Improvement Plan** shall describe **all public improvements** in the public right-of-way included under the proposed project. All identified improvements shall be **constructed prior** to the **issuance** of the final occupancy permit.

Final plans shall be **submitted** and **reviewed** as part of the **Public Improvement Plan** submitted to the City of San Jose Public Works **prior** to the **issuance** of development permits for the proposed project. Per City specifications, the **Public Improvement Plan** shall describe all public improvements in the public right-of-way included under the proposed project. All identified improvements shall be constructed prior to the issuance of the final occupancy permit.

Based on the City's VMT Evaluation Tool, the project **applicant shall ensure** that implementation of the **multimodal infrastructure** improvements described above **shall lower** the project **VMT to 14.11 per worker** (a reduction of about 4.8 percent), which would reduce the project's VMT to below the City's threshold of 14.37 VMT per worker.

Prior to the **issuance** of any grading or building permits, the project applicant shall submit the **project design plans showing enhancements** to the City's Department of Parks, Recreation, & Neighborhood Services, Department of Transportation, and the **Department of Public Works** for **review and approval.**" (MND, p. 8, *emph. added.*)¹²

As can be evidenced from the above-quoted and emphasized MND statements, the proposed plans are aimed to reduce *employee* VMT and are solely "traffic calming measures and bike access improvements" which involve narrowing existing roadway lane widths to implement protected bikeways in both directions and connecting the bike lanes on existing streets in order to encourage bicycle use.¹³

¹² *Id.*

¹³ *Id.*

First, the proposed mitigation measure is illusory, since it only requires the Project Applicant to submit plans and requires the City to review those. It further puts the burden on the Applicant to “ensure” that the proposed changes result in reduction of VMT. Simply put, there is no commitment to mitigation at all. Even under the EIR-related CEQA Guidelines § 15126.4, subd (a)(1)(B), this is improper since, *inter alia*, the City does not commit to mitigation but rather relies on the Applicant to mitigate.

F-7

Second, the proposed mitigation measure is illusory also because of its timing: prior to the issuance of permits and does not provide for any *discretionary approval* or hearing. As related, the proposed mitigation measure provides for “approval” of only the enhancement plans, and such approval will be by the Public Works department, apparently without any public hearing.

F-8

Third, the proposed mitigation measure improperly finds that the mitigation measures will necessarily reduce the traffic impacts to the level of significance *without* even knowing what those enhancements would be.

F-9

Fourth, based on the mitigation measure, it is the Public Works department, if at all, that will be making the finding that the Project’s enhancements proposed by the Applicant will indeed reduce traffic impacts to the level of insignificance. This violates CEQA’s non-delegation provision. Guidelines § 15025(b)(2) (shall not delegate).

F-10

Fifth, the mitigation measures are infeasible and illusory since they are based on the assumption that the Project’s *employees* will be taking bikes or just walking to the Project site. It also proposes to *narrow* or *tighten* the roads to accommodate or install bike lanes. Yet, at the same time, the MND elsewhere acknowledges that the Project site will attract heavy-duty trucks:

“The project’s trip generation estimates include **258 daily truck trips** generated from operating the proposed project, which are assumed to be **heavy-duty diesel-powered trucks** and a **source of long-term DPM emissions**. These trucks would travel to and from the site and are anticipated to **idle onsite for 5 minutes** for each trip. Daily passenger vehicle trips generated by the project would not generate a significant amount of TAC emissions and were not included in the analysis.” (MND, p. 48.)

F-11

In addition, the MND speaks about the need for wider roads to accommodate the passage or turns of such trucks:

“Both driveways on Hellyer Avenue would be **45 feet wide** and have been **designed to accommodate large freight trucks turning** in and out of the driveways. Due to the **turn restriction** at the southern driveway on Hellyer Avenue, it is expected that the **majority of project traffic** would access the project site from **Hellyer Avenue** using the northern driveway. The northern/western driveway on Piercy Road would be **45 feet wide** and the southern driveway would be **26 feet wide**. The wider northern driveway would be able to accommodate **large freight trucks**. Based on the distribution of the proposed on-site vehicle parking (see Figure 4), it is assumed both driveways on Piercy Road would be used by vehicles equally.” (MND, p. 170, *emph. added.*)

As such, the MND’s sole traffic mitigation measure *assumes* that the Project’s future-employees will ride bikes or walk to the Project site on roads that will be also used by large freight trucks. There is no assurance that employees will indeed do so. It is also reasonably foreseeable that employees will not take bikes or walk to the Project site at a minimum due to the road safety concerns as well as concerns about being exposed to a high level of diesel emissions, air and GHG impacts from such heavy trucks on the road. CEQA requires that in such cases of doubt the agency should resolve those in favor of an EIR. *Nelson v. County of Kern* (2010) 190 CaLApp.4th 252, 282.

The above-noted flaws violate CEQA’s standard for MNDs under PRC § 21064.5 to show that: “(1) **revisions** in the project plans or proposals made by, or agreed to by, the applicant **before** the proposed negative declaration and initial study are **released** for public review **would avoid** the **effects** or **mitigate** the **effects** to a **point** where **clearly no** significant effect on the environment would occur, and (2) **there is no substantial evidence** in light of the whole record before the public agency that the project, **as revised, may have** a significant effect on the environment.” (*Emph. added.*)

Sixth, the proposed mitigation measure is improperly deferred and vague as it defers the formulation of mitigation measures or final design thereof to a later time, shifts that burden to the Applicant, and further does not explain how providing bikeways will in fact “clearly” reduce VMT to the level of insignificance, as required for an MND. As stated earlier, the MND fails to meet CEQA’s pre-conditions and requirements even in case of an EIR. CEQA forbids deferred mitigation. Guidelines §

F-11
Con't

F-12

15126.4(a)(1)(B). CEQA allows deferral of details of MMs only “when it is impractical or infeasible to include those details during the project’s environmental review.” (*Id.*) CEQA further requires: “that the agency (1) commits itself to the mitigation, (2) adopts specific performance standards the mitigation will achieve, and (3) identifies the type(s) of potential action(s) that can feasibly achieve that performance standard...”

Guidelines § 15126.4(a)(1)(B). City failed all these preconditions and requirements, as its MND failed to show why the development of the traffic calming plans or pedestrian improvements cannot be developed before the issuance of the MND, what impacts they will have individually or cumulatively, if those would indeed be feasible, and the specific performance criteria the Applicant will have to meet. Moreover, as noted earlier, the City clearly did not commit to mitigation, since all it would do, per the mitigation measure, is review and approve the proposed plans of the Applicant.

Furthermore, the mitigation measure relies on some future coordination with other public entities aside from the City to implement the mitigation measure and does not show how this measure will be enforced. For example, there is no requirement that the Applicant report the number of employee trips after the bike lanes and pedestrian improvements are in place and ensure that the VMTs are indeed reduced to the level of insignificance.

In addition, the mitigation measure calls for “pedestrian network improvements” which involve:

“[t]he pork-chop island on the southwest corner at the Hellyer Avenue and Silicon Valley Boulevard intersection [to] be removed . . . The improvement shall require tightening the corner radius at the southeast corner and modifying the signal to accommodate pork chop island removals. This shall improve the multi-modal environment by eliminating unsignalized pedestrian/vehicle conflict points, increasing visibility of pedestrians at the intersection corner, and providing a safer refuge for pedestrians waiting to use the crosswalks.”¹⁴

However, yet again, this mitigation measure fails to explain how simply encouraging pedestrian travel will actually discourage vehicle travel and thus cause an actual decrease in VMT resulting from the Project and thus result in a less than significant impact on traffic and transportation.

¹⁴ MND, pp. 1 & 168.

Even further, the IS/MND states that, per the City’s VMT Evaluation Tool, the Project Applicant will then “ensure that implementation of the multimodal infrastructure improvements described above shall lower the project VMT to 14.11 per worker (a reduction of about 4.8 percent), which would reduce the project’s VMT to below the City’s threshold of 14.37 VMT per worker.”

F-12
Cont

However, the foregoing measure is impermissibly vague and improperly defers the actual reduction in VMT to some later unspecified date without showing *how* these proposed measures would reduce VMT.

Yet another flaw in the City’s traffic impact analysis is its reliance on SB 743 to disregard traffic congestion. The City claims it provides level of service analysis for information purposes only. (MND, p. 173-176.) And yet, SB 743 on its face does not apply to *industrial* projects here, but rather to commercial and residential projects only. Further, as evidenced by the MND, the level of service will definitely deteriorate with the Project and at least two intersections will go from Level C to Level D, i.e., worsen. (MND, p. 176.) Yet, the City claims the traffic impacts will be less than significant.

F-13

A related flaw in the City’s analysis is that it appears to rely on some 2006-year approved *related* project and traffic study, without even disclosing what kind of CEQA clearance did the prior project have:

“City staff have determined that the project is **not required** to **analyze** any **signalized intersections** for potential adverse effects since the amount of industrial development proposed for the site (which is located in Edenvale Sub-Area 3) **has already been approved** as part of the **EADP**. The project is, however, required to report intersection levels of service under existing, background, and background plus project conditions for informational purposes. The results of the intersection level of service evaluation (see Table 25) show that all of the signalized study intersections are currently operating at acceptable levels of service during the AM and PM peak hours of traffic and would continue to operate acceptably under background and background plus project conditions. The following eight intersections were studied:” (MND, p. 175, *emph. added.*)

F-14

Elsewhere, the MND explains about the EADP as being approved in 2006:

The project site is located within the **Edenvale Area Development Policy (EADP)** boundaries. With **approval** of the nearby **iStar development** proposal in **2006**, **additional 494,000** square feet of potential industrial development **was approved** for future industrial/R&D/office development within Edenvale Sub-Areas 1 and 3. The 494,000 square feet of potential industrial development is **an addition** to the approximately **2.9 million square feet** of existing capacity remaining for Sub-Areas 1, 3, and 4 per the **original EADP**. The project site is located in Edenvale Sub-Area 3, which means the site **already has approval for industrial development** as part of the **EADP**. The **traffic study** that was **completed** for the iStar development identified intersection improvements based on full buildout of the 494,000 square feet of industrial development. The **necessary intersection** improvements that were **identified** have **already been completed**. For this reason, the **project is not required** to analyze **any signalized** intersections for **potential adverse effects** due to the project. The project is, however, required to report the intersection levels of service under existing, background, and background plus project conditions for informational purposes. Under the EADP, the site would have a maximum of 530,554 square feet of industrial space.” (MND, p. 161, emph. added.)

As evidenced above, the City relies on a 2006 traffic study and an *unidentified* CEQA clearance for the 2006 EADP approval to find the Project will have no traffic impacts or no further analysis of *signalized* intersections is required. The MND must disclose what CEQA clearance was used for the EADP approval, and – to the extent it seeks to tier off of that CEQA review – it also must disclose any subsequent changes that should trigger and additional analysis.

In addition, the City must analyze the *cumulative impact* of the iStar development proposal and the feasibility of the traffic mitigation measures, in light thereof.

Finally, also given that construction of the Project itself may result in road closures and detours, there is a fair argument that the Project may have significant traffic impacts which should be assessed in an EIR pursuant to CEQA.

For the reasons set forth above, the IS/MND fails to actually show that the Project’s traffic impact will actually be mitigated to a less than significant level with the

F-14
Con't

F-15

incorporation of the proposed mitigation measure. In fact, the MND shows the opposite, necessitating an EIR.

↑ F-15
Con't

C. There Is a Fair Argument that the Project May Have a Significant Air Quality, Greenhouse Gas Emission, Water, Noise, Hazards, Human Health, and Wildlife/Biological Impacts, and Cumulative Impacts, Requiring Mandatory Findings of Significance and an EIR.

Since the Project may have significant traffic impacts that are not accurately disclosed in the MND, then its traffic-related impacts are also derivatively understated and may be significant, requiring an EIR.

There is an acknowledged direct correlation between the increase in traffic impacts and an increase in their associated air quality, greenhouse gas emission (“**GHG**”), and noise impacts. See e.g., *City of Redlands v. County of San Bernardino* (2002) 96 Cal.App.4th 398, 413, “it is reasonable to assume” that a project enabling physical residential development would have reasonably foreseeable indirect air and other impacts.

As stated in the Office of Planning Research’s (“OPR”) technical advisory in 2018:

“VMT and Greenhouse Gas Emissions Reduction. Senate Bill 32 (Pavley, 2016) requires California to reduce greenhouse gas (GHG) emissions 40 percent below 1990 levels by 2030, and Executive Order B-16-12 provides a target of 80 percent below 1990 emissions levels for the transportation sector by 2050. The transportation sector has three major means of reducing GHG emissions: increasing vehicle efficiency, reducing fuel carbon content, and reducing the amount of vehicle travel.”

F-16

Similarly, there is an acknowledged nexus between the increase of traffic and an increase in related air quality, GHG impacts, noise, water/flooding impacts and impacts on human health and natural environment, including wildlife and waterways. As described in the 2018 OPR Technical advisory:

“VMT and Other Impacts to Health and Environment. VMT mitigation also creates substantial benefits (sometimes characterized as “co-benefits” to GHG reduction) in both in the near-term and the long-term. Beyond **GHG emissions, increases in VMT** also impact **human health** and the **natural environment**. Human health is impacted as increases in **vehicle travel** lead to **more vehicle crashes, poorer air quality**, increases in chronic diseases associated with reduced physical activity, and worse

↓

mental health. Increases in vehicle travel also negatively affect other road users, including pedestrians, cyclists, other motorists, and many transit users. The **natural environment** is **impacted** as **higher VMT** leads to more collisions with wildlife and fragments habitat. Additionally, development that leads to more vehicle travel also tends to consume **more energy, water, and open space** (including farmland and sensitive habitat). This increase in impermeable surfaces **raises** the **flood risk** and **pollutant transport** into **waterways.**”

As such, there is a fair argument that the Project here may have significant traffic, air, GHG, energy, water, noise and other impacts, including impacts on human beings and natural environment.

The IS/MND ultimately concludes that the Project will have a less than significant impact with regards to GHG emissions based on the IS/MND’s reliance on the Project’s consistency with the City’s 2030 GHG Reduction Strategy, inclusion of a designated rooftop space and conduit infrastructure on the industrial buildings for solar panels, participation in the City’s Zero Waste Strategic plan, installation of high-efficiency appliances and fixtures, utilization of water efficiency landscaping species and equipment, and its consistency with the General Plan and compliance with green building ordinances and energy efficiency measures.¹⁵ However, the Project’s mere implementation of GHG reduction strategies and reliance on regulations is insufficient to conclude that the Project will have a less than significant GHG emission impact, as these measures are not specific to *this* Project.

That the Project may have air quality and GHG emission impacts is also evidenced by the recent BAAQMD thresholds, according to which “If the project includes any of the operational screening criteria above [including industrial sources or activities], then the lead agency would need to perform a detailed assessment of the project’s criteria air pollutant and precursor emissions.”¹⁶ Yet, the MND concludes that the Project will have *neither* GHG nor air quality impacts.

The Project may further have severe **GHG and air quality** impacts, in light of its traffic mitigation measure which assumes that the employees will have to bike or walk to the Project site and thereby be exposed to the high level of diesel emissions of

¹⁵ IS/MND, *supra*, at pp. 98-99.

¹⁶ BAAQMD, Chapter 4, p. 4-3; see available at: [Bay Area Air Quality Management District California Environmental Quality Act Air Quality Guidelines \(baaqmd.gov\)](https://www.baaqmd.gov/California-Environmental-Quality-Act-Air-Quality-Guidelines)

F-16
Con't

heavy trucks both at the Project site and the nearby industrial sites, such as the iStar development project the MND mentions. Such increased GHG emissions and air quality impacts may also occur in light of the fact that the Project proposes narrowing roads as traffic calming methods, which reasonably foreseeably – along with the trucks and bikes riding on the same roads – will create congestion on the roads and idling of the heavy-duty trucks, as well as other vehicles.

F-16
Con't

The Project may also have **hazards impacts**, in light of potential soil contamination due to prior agricultural work and use of pesticides. The Project’s Phase I ESA, for this purpose, discloses such potential. (Phase I ESA, p. 10.) And yet, Phase I ESA does not adequately study that potential as, *inter alia*, it relies on some “[s]oil samples [that] were collected in 2000 from 38 borings that were advanced on-Site and on adjacent property to the southwest (Clayton, 2000).” (Phase I ESA, p. 10.) Phase I ESA also found traces of asbestos in the soil and, for that purpose, proposed a limited Phase II ESA. (Phase I ESA, p. 11.) Further, Phase I ESA prepared in 2021 uses the *older* ASTM standard: “The scope of work presented in the Agreement was prepared in general accordance with ASTM E 1527-13...” (Phase I ESA, p. 1.)

This omission is particularly critical and makes the Phase I ESA tellingly inaccurate and erroneous, since as of 2021 (post-dating the September 10, 2020 ESA Phase I assessment), ASTM has revised its standards, and as of 2022, EPA¹⁷ has adopted ASTM’s new and more expansive definition of REC. Thus:

F-17

- “Under **ASTM E1527-13**, a REC is defined as the **presence** or **likely presence** of **any hazardous substances** or petroleum products in, on, or at a property: (1) due to **release** to the environment; (2) under **conditions indicative** of a release to the environment; or (3) under conditions that **pose a material threat** of a future release to the environment.
- Under **ASTM E1527-21**, a REC means (1) the **presence** of hazardous substances or petroleum due to a release to the environment; (2) the **likely presence** of hazardous substances or petroleum products due to a **likely release** to the environment; or (3) the presence of hazardous substances or petroleum products under conditions that pose a material threat of a future release to

¹⁷ <https://www.govinfo.gov/content/pkg/FR-2022-03-14/pdf/2022-05259.pdf>

the environment. Further, the new standard provides clarifying discussion notes and examples to assist the environmental professional in applying the definition. Together, the new definition and interpretations direct a consultant to rely on the environmental professional's experience regarding the *likelihood* of certain conditions resulting in releases, such as the long term operation of a dry cleaner, instead of discounting that professional experience based on the lack of current "indications of a release."¹⁸ (ital. original, bold emphasis added.)

F-17
Cont'

Lastly, Phase I ESA is silent on vapor intrusion REC, which study is specifically mandated by ASTM and EPA since 2013 under the EPA Final Rule.^{19, 20} Thus, in its Final Rule in 2013, EPA states:

EPA believes that ASTM E1527–13 improves upon the previous standard and reflects the evolving best practices and level of rigor that will afford prospective property owners necessary and essential information when making property transaction decisions and meeting continuing obligations under the CERCLA liability protections.

In particular, the new ASTM E1527–13 standard enhances the previous standard with regard to the delineation of historical releases or recognized environmental conditions at a property and makes important revisions to the standard practice to clarify that all appropriate inquires and **phase I environmental site assessments must include**, within the scope of the investigation, an **assessment** of the **real** or **potential occurrence** of **vapor migration and vapor releases on, at, in** or **to** the subject property.

F-18

Federal Register, Volume 78, No. 250, December 30, 2013, p. 3 (Emph. Added).

As such, the Phase I ESA's reliance on a soil sample in 2000 and failure to consider a more comprehensive ASTM E1527-21 suggests that the Project site may have hazards impacts that have not been studied and accounted for. Needless to say that, per the

¹⁸ <https://www.quarles.com/publications/epa-approves-astm-e1527-21-phase-i-esa-standard-for-all-appropriate-inquiry/>

¹⁹ <https://www.epa.gov/ust/petroleum-vapor-intrusion>

²⁰ <https://www.govinfo.gov/content/pkg/FR-2013-12-30/pdf/2013-31112.pdf>

Phase I ESA, the Project had to be a *commercial* one – rather than industrial. Also, to the extent the Phase I ESA relies on the 2000-year boring studies, it must be missing the potential impacts from the nearby industrial developments post year 2000. All of these factors suggest the Project may have hazards impacts, which may also translate into adverse impacts to human beings, including employees of the Project site as well as other human beings and sensitive receptors, including during the Project’s construction, grading, and dirt-hauling phase.

↑
F-18
Con't

As for **water impacts**, the MND acknowledges that the Project site soils may be contaminated, including with asbestos. As such, to the extent the Project’s grading affects the underground waters, there is a reasonable foreseeability that the Project may have water effects. Moreover, based on the MND, the Project will require disturbance of soil on 28.9 acres of land, and include removal of trees. As such, the Project may affect the natural drainage patterns and thus have water/hydrology impacts.

F-19

Lastly, as for **wildlife and biological impacts**, the MND discloses that the Project site may have various protected species but proposed inadequate mitigation measures, suffering from the same flaws as the traffic mitigation measures above. To name a few problems, the MND acknowledges that the Project site may accommodate American badger species, and yet its proposed mitigation measure MM-BIO-1a only requires that a Qualified Biologist – unclear when – shall conduct an Employee Education Program for the construction crew and educate the construction workers on identifying the special-status species and applying unidentified mitigation measures. (MND, p. 2.) Further, the MND provides that the Qualified Biologist will check if the site has active dens for the American badger, and if no active dens are found, then no mitigation is required. There is no enforcement mechanism by the City – all that the City must do is to review the Qualified Biologist’s provided documentation of the education to construction workers and findings. It is even unclear if the Qualified Biologist will be identified by the Applicant or the City. The MND’s mitigation measures for nesting raptors, other migratory birds, or Western burrowing owls are similarly inadequate, unenforceable, and illusory. (MND, pp. 2-5.)

F-20

In sum, the MND’s findings of no impacts, including but not limited to impacts in air quality and GHG emissions, are clearly erroneous, and an EIR is required to not only disclose the Project’s respective impacts, but also relate those to the adverse health impacts and impacts to the human beings that the Project may have. *Sierra Club v. County of Fresno* (2018) 6 Cal.5th 502.

F-21
↓

In addition, the above-noted impacts to human beings, as well as the fact that the Project may have cumulative impacts with related projects, such as the iStart Development identified in the EIR, these impacts by themselves require mandatory findings of significance and an EIR under CEQA Guidelines 15065. The City’s summary denial of such mandatory significance impacts (MND, p. 9) is conclusory and unsupported, in light of the above-mentioned evidence.

↑
F-21
Cont

D. There is a Fair Argument that the Project May Have a Significant Noise Impact

The Project proposes to construct two (2) industrial buildings totaling approximately 430,000 square feet.²¹ Yet, while the IS/MND ultimately concludes that the Project will have a less than significant impact on noise or a less than significant impact on noise with mitigation incorporated, the IS/MND fails to actually incorporate any mitigation measures in its noise analysis.²² In fact, the Noise Assessment in Appendix G (“**Noise Assessment**”) of the IS/MND explicitly concludes that no mitigation is required with regards to each impact discussed.²³

Furthermore, where the Noise Assessment does find that there will be a significant noise impact, it relies on the Project’s “implementation of GP Policy EC-1.7, Municipal Code requirements, and the City’s Standard Permit Conditions” to conclude that the Project’s “temporary construction noise impacts would be reduced to a less-than-significant level.” However, it is improper for the Project Applicant to merely rely on its compliance with regulations to conclude that the Project will have a less than significant impact for a number of reasons. For example, noise regulations do not capture all the noise impacts of the Project, including construction and operation. Moreover, the regulatory measures are not Project-specific and are focused on the Project itself – as such, they fail to consider the Project-specific issues (such as location, size, proposed mitigation measures) as well as the Project’s *cumulative* impacts along with other related projects. Also, the MND’s traffic impacts are understated, and therefore traffic noise is understated and left unaccounted for. Thus, an EIR is required to study the Project’s noise impacts and to determine whether those will be significant.

F-22
↓

²¹ *Id.* at p. 1.

²² *Id.* at pp. 130-148.

²³ *See*, IS/MND Appendix G Noise/Vibration Assessment (May 4, 2023), pp. 23, 29, and 31-32 (concluding no further mitigation required for each impact listed).

As stated in CEQA, Guidelines 15126.4(a)(1)(B), “[c]ompliance with a regulatory permit or other similar process may be identified as mitigation if compliance would result in implementation of measures that would be reasonably expected, based on substantial evidence in the record, to reduce the significant impact to the specified performance standards.” See also, *Californians for Alternatives to Toxics v. Department of Food & Agric.* (2005) 136 Cal.App.4th 1 (the court set aside an EIR for a statewide crop disease control plan because it did not include an evaluation of the risks to the environment and human health from the proposed program but simply presumed that no adverse impacts would occur from use of pesticides in accordance with the registration and labeling program of the California Department of Pesticide Regulation); *Ebbetts Pass Forest Watch v Department of Forestry & Fire Protection* (2008) 43 Cal. App. 4th 936, 956 (fact that Department of Pesticide Regulation had assessed environmental effects of certain herbicides in general did not excuse failure to assess effects of their use for specific timber harvesting project).

In addition, the Project’s reliance on regulatory compliance with the referenced regulations is misplaced because there is no evidence that such ordinances were to control noise outside of the building’s envelope, such as e.g., traffic noise or increase in ambient noises due to the Project’s construction and operation. *California Clean Energy Committee v. City of Woodland* (2014) 225 Cal.App.4th 173, 210 (the building codes do not address the question of whether the Project is even *safe* to build, “whether a building should be constructed at all, how large it should be, where it should be located, whether it should incorporate certain resources, or anything else external to the building’s envelope.”)

Accordingly, there is a fair argument that the Project may have a significant noise impact and as such, the Project’s potential noise impacts should be thoroughly analyzed and evaluated in an Environmental Impact Report pursuant to CEQA.

III. CONCLUSION

Based on the foregoing, the City should deny the Project’s proposed entitlements and require that an Environmental Impact Report be prepared pursuant to CEQA, consistent with the comments and issues identified in this comment letter.

Subject: Local Hire Requirements and Considerations for Greenhouse Gas Modeling

Dear Mr. Tsai,

Soil Water Air Protection Enterprise (“SWAPE”) is pleased to provide the following draft technical report explaining the significance of worker trips required for construction of land use development projects with respect to the estimation of greenhouse gas (“GHG”) emissions. The report will also discuss the potential for local hire requirements to reduce the length of worker trips, and consequently, reduced or mitigate the potential GHG impacts.

Worker Trips and Greenhouse Gas Calculations

The California Emissions Estimator Model (“CalEEMod”) is a “statewide land use emissions computer model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify potential criteria pollutant and greenhouse gas (GHG) emissions associated with both construction and operations from a variety of land use projects.”¹ CalEEMod quantifies construction-related emissions associated with land use projects resulting from off-road construction equipment; on-road mobile equipment associated with workers, vendors, and hauling; fugitive dust associated with grading, demolition, truck loading, and on-road vehicles traveling along paved and unpaved roads; and architectural coating activities; and paving.²

The number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.³

¹ “California Emissions Estimator Model.” CAPCOA, 2017, available at: <http://www.aqmd.gov/caleemod/home>.

² “California Emissions Estimator Model.” CAPCOA, 2017, available at: <http://www.aqmd.gov/caleemod/home>.

³ “CalEEMod User’s Guide.” CAPCOA, November 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.

Specifically, the number and length of vehicle trips is utilized to estimate the vehicle miles travelled (“VMT”) associated with construction. Then, utilizing vehicle-class specific EMFAC 2014 emission factors, CalEEMod calculates the vehicle exhaust, evaporative, and dust emissions resulting from construction-related VMT, including personal vehicles for worker commuting.⁴

Specifically, in order to calculate VMT, CalEEMod multiplies the average daily trip rate by the average overall trip length (see excerpt below):

$$\text{“VMT}_d = \Sigma(\text{Average Daily Trip Rate}_i * \text{Average Overall Trip Length}_i)_n$$

Where:

n = Number of land uses being modeled.”⁵

Furthermore, to calculate the on-road emissions associated with worker trips, CalEEMod utilizes the following equation (see excerpt below):

$$\text{“Emissions}_{\text{pollutant}} = \text{VMT} * \text{EF}_{\text{running,pollutant}}$$

Where:

$\text{Emissions}_{\text{pollutant}}$ = emissions from vehicle running for each pollutant

VMT = vehicle miles traveled

$\text{EF}_{\text{running,pollutant}}$ = emission factor for running emissions.”⁶

Thus, there is a direct relationship between trip length and VMT, as well as a direct relationship between VMT and vehicle running emissions. In other words, when the trip length is increased, the VMT and vehicle running emissions increase as a result. Thus, vehicle running emissions can be reduced by decreasing the average overall trip length, by way of a local hire requirement or otherwise.

Default Worker Trip Parameters and Potential Local Hire Requirements

As previously discussed, the number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.⁷ In order to understand how local hire requirements and associated worker trip length reductions impact GHG emissions calculations, it is important to consider the CalEEMod default worker trip parameters. CalEEMod provides recommended default values based on site-specific information, such as land use type, meteorological data, total lot acreage, project type and typical equipment associated with project type. If more specific project information is known, the user can change the default values and input project-specific values, but the California Environmental Quality Act (“CEQA”) requires that such changes be justified by substantial evidence.⁸ The default number of construction-related worker trips is calculated by multiplying the

⁵ “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 23.

⁶ “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 15.

⁷ “CalEEMod User’s Guide.” CAPCOA, November 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.

⁸ CalEEMod User Guide, available at: <http://www.caleemod.com/>, p. 1, 9.

number of pieces of equipment for all phases by 1.25, with the exception of worker trips required for the building construction and architectural coating phases.⁹ Furthermore, the worker trip vehicle class is a 50/25/25 percent mix of light duty autos, light duty truck class 1 and light duty truck class 2, respectively.”¹⁰ Finally, the default worker trip length is consistent with the length of the operational home-to-work vehicle trips.¹¹ The operational home-to-work vehicle trip lengths are:

“[B]ased on the *location* and *urbanization* selected on the project characteristic screen. These values were *supplied by the air districts or use a default average for the state*. Each district (or county) also assigns trip lengths for urban and rural settings” (emphasis added).¹²

Thus, the default worker trip length is based on the location and urbanization level selected by the User when modeling emissions. The below table shows the CalEEMod default rural and urban worker trip lengths by air basin (see excerpt below and Attachment A).¹³

Worker Trip Length by Air Basin		
Air Basin	Rural (miles)	Urban (miles)
Great Basin Valleys	16.8	10.8
Lake County	16.8	10.8
Lake Tahoe	16.8	10.8
Mojave Desert	16.8	10.8
Mountain Counties	16.8	10.8
North Central Coast	17.1	12.3
North Coast	16.8	10.8
Northeast Plateau	16.8	10.8
Sacramento Valley	16.8	10.8
Salton Sea	14.6	11
San Diego	16.8	10.8
San Francisco Bay Area	10.8	10.8
San Joaquin Valley	16.8	10.8
South Central Coast	16.8	10.8
South Coast	19.8	14.7
Average	16.47	11.17
Minimum	10.80	10.80
Maximum	19.80	14.70
Range	9.00	3.90

⁹ “CalEEMod User’s Guide.” CAPCOA, November 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.

¹⁰ “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 15.

¹¹ “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 14.

¹² “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 21.

¹³ “Appendix D Default Data Tables.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/05_appendix-d2016-3-2.pdf?sfvrsn=4, p. D-84 – D-86.

As demonstrated above, default rural worker trip lengths for air basins in California vary from 10.8- to 19.8- miles, with an average of 16.47 miles. Furthermore, default urban worker trip lengths vary from 10.8- to 14.7- miles, with an average of 11.17 miles. Thus, while default worker trip lengths vary by location, default urban worker trip lengths tend to be shorter in length. Based on these trends evident in the CalEEMod default worker trip lengths, we can reasonably assume that the efficacy of a local hire requirement is especially dependent upon the urbanization of the project site, as well as the project location.

Practical Application of a Local Hire Requirement and Associated Impact

To provide an example of the potential impact of a local hire provision on construction-related GHG emissions, we estimated the significance of a local hire provision for the Village South Specific Plan (“Project”) located in the City of Claremont (“City”). The Project proposed to construct 1,000 residential units, 100,000-SF of retail space, 45,000-SF of office space, as well as a 50-room hotel, on the 24-acre site. The Project location is classified as Urban and lies within the Los Angeles-South Coast County. As a result, the Project has a default worker trip length of 14.7 miles.¹⁴ In an effort to evaluate the potential for a local hire provision to reduce the Project’s construction-related GHG emissions, we prepared an updated model, reducing all worker trip lengths to 10 miles (see Attachment B). Our analysis estimates that if a local hire provision with a 10-mile radius were to be implemented, the GHG emissions associated with Project construction would decrease by approximately 17% (see table below and Attachment C).

Local Hire Provision Net Change	
Without Local Hire Provision	
Total Construction GHG Emissions (MT CO ₂ e)	3,623
Amortized Construction GHG Emissions (MT CO ₂ e/year)	120.77
With Local Hire Provision	
Total Construction GHG Emissions (MT CO ₂ e)	3,024
Amortized Construction GHG Emissions (MT CO ₂ e/year)	100.80
% Decrease in Construction-related GHG Emissions	17%

As demonstrated above, by implementing a local hire provision requiring 10 mile worker trip lengths, the Project could reduce potential GHG emissions associated with construction worker trips. More broadly, any local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

This serves as an example of the potential impacts of local hire requirements on estimated project-level GHG emissions, though it does not indicate that local hire requirements would result in reduced construction-related GHG emission for all projects. As previously described, the significance of a local hire requirement depends on the worker trip length enforced and the default worker trip length for the project’s urbanization level and location.

¹⁴ “Appendix D Default Data Tables.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/05_appendix-d2016-3-2.pdf?sfvrsn=4, p. D-85.

Village South Specific Plan (Proposed)
Los Angeles-South Coast County, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	45.00	1000sqft	1.03	45,000.00	0
High Turnover (Sit Down Restaurant)	36.00	1000sqft	0.83	36,000.00	0
Hotel	50.00	Room	1.67	72,600.00	0
Quality Restaurant	8.00	1000sqft	0.18	8,000.00	0
Apartments Low Rise	25.00	Dwelling Unit	1.56	25,000.00	72
Apartments Mid Rise	975.00	Dwelling Unit	25.66	975,000.00	2789
Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MW hr)	702.44	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Annual

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MW hr)	702.44	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Annual

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MW hr)	702.44	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

Los Angeles-South Coast County, Winter

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	45.00	1000sqft	1.03	45,000.00	0
High Turnover (Sit Down Restaurant)	36.00	1000sqft	0.83	36,000.00	0
Hotel	50.00	Room	1.67	72,600.00	0
Quality Restaurant	8.00	1000sqft	0.18	8,000.00	0
Apartments Low Rise	25.00	Dwelling Unit	1.56	25,000.00	72
Apartments Mid Rise	975.00	Dwelling Unit	25.66	975,000.00	2789
Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MW hr)	702.44	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

<i>% Decrease in Construction-related GHG Emissions</i>	17%

EXHIBIT B

Paul Rosenfeld, Ph.D.

Principal Environmental Chemist

Chemical Fate and Transport & Air Dispersion Modeling

Risk Assessment & Remediation Specialist

Education

Ph.D. Soil Chemistry, University of Washington, 1999. Dissertation on volatile organic compound filtration.

M.S. Environmental Science, U.C. Berkeley, 1995. Thesis on organic waste economics.

B.A. Environmental Studies, U.C. Santa Barbara, 1991. Thesis on wastewater treatment.

Professional Experience

Dr. Rosenfeld has over 25 years' experience conducting environmental investigations and risk assessments for evaluating impacts to human health, property, and ecological receptors. His expertise focuses on the fate and transport of environmental contaminants, human health risk, exposure assessment, and ecological restoration. Dr. Rosenfeld has evaluated and modeled emissions from unconventional oil drilling operations, oil spills, landfills, boilers and incinerators, process stacks, storage tanks, confined animal feeding operations, and many other industrial and agricultural sources. His project experience ranges from monitoring and modeling of pollution sources to evaluating impacts of pollution on workers at industrial facilities and residents in surrounding communities.

Dr. Rosenfeld has investigated and designed remediation programs and risk assessments for contaminated sites containing lead, heavy metals, mold, bacteria, particulate matter, petroleum hydrocarbons, chlorinated solvents, pesticides, radioactive waste, dioxins and furans, semi- and volatile organic compounds, PCBs, PAHs, perchlorate, asbestos, per- and poly-fluoroalkyl substances (PFOA/PFOS), unusual polymers, fuel oxygenates (MTBE), among other pollutants. Dr. Rosenfeld also has experience evaluating greenhouse gas emissions from various projects and is an expert on the assessment of odors from industrial and agricultural sites, as well as the evaluation of odor nuisance impacts and technologies for abatement of odorous emissions. As a principal scientist at SWAPE, Dr. Rosenfeld directs air dispersion modeling and exposure assessments. He has served as an expert witness and testified about pollution sources causing nuisance and/or personal injury at dozens of sites and has testified as an expert witness on more than ten cases involving exposure to air contaminants from industrial sources.

Professional History:

Soil Water Air Protection Enterprise (SWAPE); 2003 to present; Principal and Founding Partner
UCLA School of Public Health; 2007 to 2011; Lecturer (Assistant Researcher)
UCLA School of Public Health; 2003 to 2006; Adjunct Professor
UCLA Environmental Science and Engineering Program; 2002-2004; Doctoral Intern Coordinator
UCLA Institute of the Environment, 2001-2002; Research Associate
Komex H₂O Science, 2001 to 2003; Senior Remediation Scientist
National Groundwater Association, 2002-2004; Lecturer
San Diego State University, 1999-2001; Adjunct Professor
Anteon Corp., San Diego, 2000-2001; Remediation Project Manager
Ogden (now Amec), San Diego, 2000-2000; Remediation Project Manager
Bechtel, San Diego, California, 1999 – 2000; Risk Assessor
King County, Seattle, 1996 – 1999; Scientist
James River Corp., Washington, 1995-96; Scientist
Big Creek Lumber, Davenport, California, 1995; Scientist
Plumas Corp., California and USFS, Tahoe 1993-1995; Scientist
Peace Corps and World Wildlife Fund, St. Kitts, West Indies, 1991-1993; Scientist

Presentations:

Rosenfeld, P.E., Sutherland, A; Hesse, R.; Zapata, A. (October 3-6, 2013). Air dispersion modeling of volatile organic emissions from multiple natural gas wells in Decatur, TX. *44th Western Regional Meeting, American Chemical Society*. Lecture conducted from Santa Clara, CA.

Sok, H.L.; Waller, C.C.; Feng, L.; Gonzalez, J.; Sutherland, A.J.; Wisdom-Stack, T.; Sahai, R.K.; Hesse, R.C.; **Rosenfeld, P.E.** (June 20-23, 2010). Atrazine: A Persistent Pesticide in Urban Drinking Water. *Urban Environmental Pollution*. Lecture conducted from Boston, MA.

Feng, L.; Gonzalez, J.; Sok, H.L.; Sutherland, A.J.; Waller, C.C.; Wisdom-Stack, T.; Sahai, R.K.; La, M.; Hesse, R.C.; **Rosenfeld, P.E.** (June 20-23, 2010). Bringing Environmental Justice to East St. Louis, Illinois. *Urban Environmental Pollution*. Lecture conducted from Boston, MA.

Rosenfeld, P.E. (April 19-23, 2009). Perfluorooctanoic Acid (PFOA) and Perfluorooctane Sulfonate (PFOS) Contamination in Drinking Water From the Use of Aqueous Film Forming Foams (AFFF) at Airports in the United States. *2009 Ground Water Summit and 2009 Ground Water Protection Council Spring Meeting*, Lecture conducted from Tuscon, AZ.

Rosenfeld, P.E. (April 19-23, 2009). Cost to Filter Atrazine Contamination from Drinking Water in the United States” Contamination in Drinking Water From the Use of Aqueous Film Forming Foams (AFFF) at Airports in the United States. *2009 Ground Water Summit and 2009 Ground Water Protection Council Spring Meeting*. Lecture conducted from Tuscon, AZ.

Wu, C., Tam, L., Clark, J., **Rosenfeld, P.** (20-22 July, 2009). Dioxin and furan blood lipid concentrations in populations living near four wood treatment facilities in the United States. Brebbia, C.A. and Popov, V., eds., *Air Pollution XVII: Proceedings of the Seventeenth International Conference on Modeling, Monitoring and Management of Air Pollution*. Lecture conducted from Tallinn, Estonia.

Rosenfeld, P. E. (October 15-18, 2007). Moss Point Community Exposure To Contaminants From A Releasing Facility. *The 23rd Annual International Conferences on Soils Sediment and Water*. Platform lecture conducted from University of Massachusetts, Amherst MA.

Rosenfeld, P. E. (October 15-18, 2007). The Repeated Trespass of Tritium-Contaminated Water Into A Surrounding Community Form Repeated Waste Spills From A Nuclear Power Plant. *The 23rd Annual International Conferences on Soils Sediment and Water*. Platform lecture conducted from University of Massachusetts, Amherst MA.

Rosenfeld, P. E. (October 15-18, 2007). Somerville Community Exposure To Contaminants From Wood Treatment Facility Emissions. The *23rd Annual International Conferences on Soils Sediment and Water*. Lecture conducted from University of Massachusetts, Amherst MA.

Rosenfeld P. E. (March 2007). Production, Chemical Properties, Toxicology, & Treatment Case Studies of 1,2,3-Trichloropropane (TCP). *The Association for Environmental Health and Sciences (AEHS) Annual Meeting*. Lecture conducted from San Diego, CA.

Rosenfeld P. E. (March 2007). Blood and Attic Sampling for Dioxin/Furan, PAH, and Metal Exposure in Florida, Alabama. *The AEHS Annual Meeting*. Lecture conducted from San Diego, CA.

Hensley A.R., Scott, A., **Rosenfeld P.E.**, Clark, J.J.J. (August 21 – 25, 2006). Dioxin Containing Attic Dust And Human Blood Samples Collected Near A Former Wood Treatment Facility. *The 26th International Symposium on Halogenated Persistent Organic Pollutants – DIOXIN2006*. Lecture conducted from Radisson SAS Scandinavia Hotel in Oslo Norway.

Hensley A.R., Scott, A., **Rosenfeld P.E.**, Clark, J.J.J. (November 4-8, 2006). Dioxin Containing Attic Dust And Human Blood Samples Collected Near A Former Wood Treatment Facility. *APHA 134 Annual Meeting & Exposition*. Lecture conducted from Boston Massachusetts.

Paul Rosenfeld Ph.D. (October 24-25, 2005). Fate, Transport and Persistence of PFOA and Related Chemicals. Mealey's C8/PFOA. *Science, Risk & Litigation Conference*. Lecture conducted from The Rittenhouse Hotel, Philadelphia, PA.

Paul Rosenfeld Ph.D. (September 19, 2005). Brominated Flame Retardants in Groundwater: Pathways to Human Ingestion, *Toxicology and Remediation PEMA Emerging Contaminant Conference*. Lecture conducted from Hilton Hotel, Irvine California.

Paul Rosenfeld Ph.D. (September 19, 2005). Fate, Transport, Toxicity, And Persistence of 1,2,3-TCP. *PEMA Emerging Contaminant Conference*. Lecture conducted from Hilton Hotel in Irvine, California.

Paul Rosenfeld Ph.D. (September 26-27, 2005). Fate, Transport and Persistence of PDBEs. *Mealey's Groundwater Conference*. Lecture conducted from Ritz Carlton Hotel, Marina Del Ray, California.

Paul Rosenfeld Ph.D. (June 7-8, 2005). Fate, Transport and Persistence of PFOA and Related Chemicals. *International Society of Environmental Forensics: Focus On Emerging Contaminants*. Lecture conducted from Sheraton Oceanfront Hotel, Virginia Beach, Virginia.

Paul Rosenfeld Ph.D. (July 21-22, 2005). Fate Transport, Persistence and Toxicology of PFOA and Related Perfluorochemicals. *2005 National Groundwater Association Ground Water And Environmental Law Conference*. Lecture conducted from Wyndham Baltimore Inner Harbor, Baltimore Maryland.

Paul Rosenfeld Ph.D. (July 21-22, 2005). Brominated Flame Retardants in Groundwater: Pathways to Human Ingestion, Toxicology and Remediation. *2005 National Groundwater Association Ground Water and Environmental Law Conference*. Lecture conducted from Wyndham Baltimore Inner Harbor, Baltimore Maryland.

Paul Rosenfeld, Ph.D. and James Clark Ph.D. and Rob Hesse R.G. (May 5-6, 2004). Tert-butyl Alcohol Liability and Toxicology, A National Problem and Unquantified Liability. *National Groundwater Association. Environmental Law Conference*. Lecture conducted from Congress Plaza Hotel, Chicago Illinois.

Paul Rosenfeld, Ph.D. (March 2004). Perchlorate Toxicology. *Meeting of the American Groundwater Trust*. Lecture conducted from Phoenix Arizona.

Hagemann, M.F., **Paul Rosenfeld, Ph.D.** and Rob Hesse (2004). Perchlorate Contamination of the Colorado River. *Meeting of tribal representatives*. Lecture conducted from Parker, AZ.

Paul Rosenfeld, Ph.D. (April 7, 2004). A National Damage Assessment Model For PCE and Dry Cleaners. *Drycleaner Symposium. California Ground Water Association*. Lecture conducted from Radison Hotel, Sacramento, California.

Rosenfeld, P. E., Grey, M., (June 2003) Two stage biofilter for biosolids composting odor control. *Seventh International In Situ And On Site Bioremediation Symposium Battelle Conference* Orlando, FL.

Paul Rosenfeld, Ph.D. and James Clark Ph.D. (February 20-21, 2003) Understanding Historical Use, Chemical Properties, Toxicity and Regulatory Guidance of 1,4 Dioxane. *National Groundwater Association. Southwest Focus Conference. Water Supply and Emerging Contaminants..* Lecture conducted from Hyatt Regency Phoenix Arizona.

Paul Rosenfeld, Ph.D. (February 6-7, 2003). Underground Storage Tank Litigation and Remediation. *California CUPA Forum*. Lecture conducted from Marriott Hotel, Anaheim California.

Paul Rosenfeld, Ph.D. (October 23, 2002) Underground Storage Tank Litigation and Remediation. *EPA Underground Storage Tank Roundtable*. Lecture conducted from Sacramento California.

Rosenfeld, P.E. and Suffet, M. (October 7- 10, 2002). Understanding Odor from Compost, *Wastewater and Industrial Processes. Sixth Annual Symposium On Off Flavors in the Aquatic Environment. International Water Association*. Lecture conducted from Barcelona Spain.

Rosenfeld, P.E. and Suffet, M. (October 7- 10, 2002). Using High Carbon Wood Ash to Control Compost Odor. *Sixth Annual Symposium On Off Flavors in the Aquatic Environment. International Water Association*. Lecture conducted from Barcelona Spain.

Rosenfeld, P.E. and Grey, M. A. (September 22-24, 2002). Biocycle Composting For Coastal Sage Restoration. *Northwest Biosolids Management Association*. Lecture conducted from Vancouver Washington..

Rosenfeld, P.E. and Grey, M. A. (November 11-14, 2002). Using High-Carbon Wood Ash to Control Odor at a Green Materials Composting Facility. *Soil Science Society Annual Conference*. Lecture conducted from Indianapolis, Maryland.

Rosenfeld, P.E. (September 16, 2000). Two stage biofilter for biosolids composting odor control. *Water Environment Federation*. Lecture conducted from Anaheim California.

Rosenfeld, P.E. (October 16, 2000). Wood ash and biofilter control of compost odor. *Biofest*. Lecture conducted from Ocean Shores, California.

Rosenfeld, P.E. (2000). Bioremediation Using Organic Soil Amendments. *California Resource Recovery Association*. Lecture conducted from Sacramento California.

Rosenfeld, P.E., C.L. Henry, R. Harrison. (1998). Comparison of Microbial Activity and Odor Emissions from Three Different Biosolids Applied to Forest Soil. *Brown and Caldwell*. Lecture conducted from Seattle Washington.

Rosenfeld, P.E., C.L. Henry. (1998). Characterization, Quantification, and Control of Odor Emissions from Biosolids Application To Forest Soil. *Biofest*. Lecture conducted from Lake Chelan, Washington.

Rosenfeld, P.E., C.L. Henry, R. Harrison. (1998). Oat and Grass Seed Germination and Nitrogen and Sulfur Emissions Following Biosolids Incorporation With High-Carbon Wood-Ash. Water Environment Federation 12th Annual Residuals and Biosolids Management Conference Proceedings. Lecture conducted from Bellevue Washington.

Rosenfeld, P.E., C.L. Henry, R. B. Harrison, and R. Dills. (1997). Comparison of Odor Emissions From Three Different Biosolids Applied to Forest Soil. *Soil Science Society of America*. Lecture conducted from Anaheim California.

Teaching Experience:

UCLA Department of Environmental Health (Summer 2003 through 2010) Taught Environmental Health Science 100 to students, including undergrad, medical doctors, public health professionals and nurses. Course focused on the health effects of environmental contaminants.

National Ground Water Association, Successful Remediation Technologies. Custom Course in Sante Fe, New Mexico. May 21, 2002. Focused on fate and transport of fuel contaminants associated with underground storage tanks.

National Ground Water Association; Successful Remediation Technologies Course in Chicago Illinois. April 1, 2002. Focused on fate and transport of contaminants associated with Superfund and RCRA sites.

California Integrated Waste Management Board, April and May, 2001. Alternative Landfill Caps Seminar in San Diego, Ventura, and San Francisco. Focused on both prescriptive and innovative landfill cover design.

UCLA Department of Environmental Engineering, February 5, 2002. Seminar on Successful Remediation Technologies focusing on Groundwater Remediation.

University Of Washington, Soil Science Program, Teaching Assistant for several courses including: Soil Chemistry, Organic Soil Amendments, and Soil Stability.

U.C. Berkeley, Environmental Science Program Teaching Assistant for Environmental Science 10.

Academic Grants Awarded:

California Integrated Waste Management Board. \$41,000 grant awarded to UCLA Institute of the Environment. Goal: To investigate effect of high carbon wood ash on volatile organic emissions from compost. 2001.

Synagro Technologies, Corona California: \$10,000 grant awarded to San Diego State University. Goal: investigate effect of biosolids for restoration and remediation of degraded coastal sage soils. 2000.

King County, Department of Research and Technology, Washington State. \$100,000 grant awarded to University of Washington: Goal: To investigate odor emissions from biosolids application and the effect of polymers and ash on VOC emissions. 1998.

Northwest Biosolids Management Association, Washington State. \$20,000 grant awarded to investigate effect of polymers and ash on VOC emissions from biosolids. 1997.

James River Corporation, Oregon: \$10,000 grant was awarded to investigate the success of genetically engineered Poplar trees with resistance to round-up. 1996.

United State Forest Service, Tahoe National Forest: \$15,000 grant was awarded to investigating fire ecology of the Tahoe National Forest. 1995.

Kellogg Foundation, Washington D.C. \$500 grant was awarded to construct a large anaerobic digester on St. Kitts in West Indies. 1993

Deposition and/or Trial Testimony:

In the United States District Court For The District of New Jersey

Duarte et al, *Plaintiffs*, vs. United States Metals Refining Company et. al. *Defendant*.

Case No.: 2:17-cv-01624-ES-SCM

Rosenfeld Deposition. 6-7-2019

In the United States District Court of Southern District of Texas Galveston Division

M/T Carla Maersk, *Plaintiffs*, vs. Conti 168., Schiffahrts-GMBH & Co. Bulker KG MS “Conti Perdido”
Defendant.

Case No.: 3:15-CV-00106 consolidated with 3:15-CV-00237

Rosenfeld Deposition. 5-9-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica

Carole-Taddeo-Bates et al., vs. Ifran Khan et al., Defendants

Case No.: No. BC615636

Rosenfeld Deposition, 1-26-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica

The San Gabriel Valley Council of Governments et al. vs El Adobe Apts. Inc. et al., Defendants

Case No.: No. BC646857

Rosenfeld Deposition, 10-6-2018; Trial 3-7-19

In United States District Court For The District of Colorado

Bells et al. Plaintiff vs. The 3M Company et al., Defendants

Case: No 1:16-cv-02531-RBJ

Rosenfeld Deposition, 3-15-2018 and 4-3-2018

In The District Court Of Regan County, Texas, 112th Judicial District

Phillip Bales et al., Plaintiff vs. Dow Agrosiences, LLC, et al., Defendants

Cause No 1923

Rosenfeld Deposition, 11-17-2017

In The Superior Court of the State of California In And For The County Of Contra Costa

Simons et al., Plaintiffs vs. Chevron Corporation, et al., Defendants

Cause No C12-01481

Rosenfeld Deposition, 11-20-2017

In The Circuit Court Of The Twentieth Judicial Circuit, St Clair County, Illinois

Martha Custer et al., Plaintiff vs. Cerro Flow Products, Inc., Defendants

Case No.: No. 0i9-L-2295

Rosenfeld Deposition, 8-23-2017

In The Superior Court of the State of California, For The County of Los Angeles

Warrn Gilbert and Penny Gilber, Plaintiff vs. BMW of North America LLC

Case No.: LC102019 (c/w BC582154)

Rosenfeld Deposition, 8-16-2017, Trail 8-28-2018

In the Northern District Court of Mississippi, Greenville Division

Brenda J. Cooper, et al., *Plaintiffs*, vs. Meritor Inc., et al., *Defendants*

Case Number: 4:16-cv-52-DMB-JVM

Rosenfeld Deposition: July 2017

In The Superior Court of the State of Washington, County of Snohomish
Michael Davis and Julie Davis et al., Plaintiff vs. Cedar Grove Composting Inc., Defendants
Case No.: No. 13-2-03987-5
Rosenfeld Deposition, February 2017
Trial, March 2017

In The Superior Court of the State of California, County of Alameda
Charles Spain., Plaintiff vs. Thermo Fisher Scientific, et al., Defendants
Case No.: RG14711115
Rosenfeld Deposition, September 2015

In The Iowa District Court In And For Poweshiek County
Russell D. Winburn, et al., Plaintiffs vs. Doug Hoksbergen, et al., Defendants
Case No.: LALA002187
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County
Jerry Dovico, et al., Plaintiffs vs. Valley View Sine LLC, et al., Defendants
Law No.: LALA105144 - Division A
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County
Doug Pauls, et al., et al., Plaintiffs vs. Richard Warren, et al., Defendants
Law No.: LALA105144 - Division A
Rosenfeld Deposition, August 2015

In The Circuit Court of Ohio County, West Virginia
Robert Andrews, et al. v. Antero, et al.
Civil Action NO. 14-C-30000
Rosenfeld Deposition, June 2015

In The Third Judicial District County of Dona Ana, New Mexico
Betty Gonzalez, et al. Plaintiffs vs. Del Oro Dairy, Del Oro Real Estate LLC, Jerry Settles and Deward
DeRuyter, Defendants
Rosenfeld Deposition: July 2015

In The Iowa District Court For Muscatine County
Laurie Freeman et. al. Plaintiffs vs. Grain Processing Corporation, Defendant
Case No 4980
Rosenfeld Deposition: May 2015

In the Circuit Court of the 17th Judicial Circuit, in and For Broward County, Florida
Walter Hinton, et. al. Plaintiff, vs. City of Fort Lauderdale, Florida, a Municipality, Defendant.
Case Number CACE07030358 (26)
Rosenfeld Deposition: December 2014

In the United States District Court Western District of Oklahoma
Tommy McCarty, et al., Plaintiffs, v. Oklahoma City Landfill, LLC d/b/a Southeast Oklahoma City
Landfill, et al. Defendants.
Case No. 5:12-cv-01152-C
Rosenfeld Deposition: July 2014

In the County Court of Dallas County Texas
Lisa Parr et al, *Plaintiff*, vs. Aruba et al, *Defendant*.
Case Number cc-11-01650-E
Rosenfeld Deposition: March and September 2013
Rosenfeld Trial: April 2014

In the Court of Common Pleas of Tuscarawas County Ohio
John Michael Abicht, et al., *Plaintiffs*, vs. Republic Services, Inc., et al., *Defendants*
Case Number: 2008 CT 10 0741 (Cons. w/ 2009 CV 10 0987)
Rosenfeld Deposition: October 2012

In the United States District Court of Southern District of Texas Galveston Division
Kyle Cannon, Eugene Donovan, Genaro Ramirez, Carol Sassler, and Harvey Walton, each Individually and on behalf of those similarly situated, *Plaintiffs*, vs. BP Products North America, Inc., *Defendant*.
Case 3:10-cv-00622
Rosenfeld Deposition: February 2012
Rosenfeld Trial: April 2013

In the Circuit Court of Baltimore County Maryland
Philip E. Cvach, II et al., *Plaintiffs* vs. Two Farms, Inc. d/b/a Royal Farms, Defendants
Case Number: 03-C-12-012487 OT
Rosenfeld Deposition: September 2013

Matthew F. Hagemann, P.G., C.Hg., QSD, QSP

**Geologic and Hydrogeologic Characterization
Industrial Stormwater Compliance
Investigation and Remediation Strategies
Litigation Support and Testifying Expert
CEQA Review**

Education:

M.S. Degree, Geology, California State University Los Angeles, Los Angeles, CA, 1984.

B.A. Degree, Geology, Humboldt State University, Arcata, CA, 1982.

Professional Certifications:

California Professional Geologist

California Certified Hydrogeologist

Qualified SWPPP Developer and Practitioner

Professional Experience:

Matt has 25 years of experience in environmental policy, assessment and remediation. He spent nine years with the U.S. EPA in the RCRA and Superfund programs and served as EPA's Senior Science Policy Advisor in the Western Regional Office where he identified emerging threats to groundwater from perchlorate and MTBE. While with EPA, Matt also served as a Senior Hydrogeologist in the oversight of the assessment of seven major military facilities undergoing base closure. He led numerous enforcement actions under provisions of the Resource Conservation and Recovery Act (RCRA) while also working with permit holders to improve hydrogeologic characterization and water quality monitoring.

Matt has worked closely with U.S. EPA legal counsel and the technical staff of several states in the application and enforcement of RCRA, Safe Drinking Water Act and Clean Water Act regulations. Matt has trained the technical staff in the States of California, Hawaii, Nevada, Arizona and the Territory of Guam in the conduct of investigations, groundwater fundamentals, and sampling techniques.

Positions Matt has held include:

- Founding Partner, Soil/Water/Air Protection Enterprise (SWAPE) (2003 – present);
- Geology Instructor, Golden West College, 2010 – 2014;
- Senior Environmental Analyst, Komex H2O Science, Inc. (2000 -- 2003);

- Executive Director, Orange Coast Watch (2001 – 2004);
- Senior Science Policy Advisor and Hydrogeologist, U.S. Environmental Protection Agency (1989–1998);
- Hydrogeologist, National Park Service, Water Resources Division (1998 – 2000);
- Adjunct Faculty Member, San Francisco State University, Department of Geosciences (1993 – 1998);
- Instructor, College of Marin, Department of Science (1990 – 1995);
- Geologist, U.S. Forest Service (1986 – 1998); and
- Geologist, Dames & Moore (1984 – 1986).

Senior Regulatory and Litigation Support Analyst:

With SWAPE, Matt’s responsibilities have included:

- Lead analyst and testifying expert in the review of over 100 environmental impact reports since 2003 under CEQA that identify significant issues with regard to hazardous waste, water resources, water quality, air quality, Valley Fever, greenhouse gas emissions, and geologic hazards. Make recommendations for additional mitigation measures to lead agencies at the local and county level to include additional characterization of health risks and implementation of protective measures to reduce worker exposure to hazards from toxins and Valley Fever.
- Stormwater analysis, sampling and best management practice evaluation at industrial facilities.
- Manager of a project to provide technical assistance to a community adjacent to a former Naval shipyard under a grant from the U.S. EPA.
- Technical assistance and litigation support for vapor intrusion concerns.
- Lead analyst and testifying expert in the review of environmental issues in license applications for large solar power plants before the California Energy Commission.
- Manager of a project to evaluate numerous formerly used military sites in the western U.S.
- Manager of a comprehensive evaluation of potential sources of perchlorate contamination in Southern California drinking water wells.
- Manager and designated expert for litigation support under provisions of Proposition 65 in the review of releases of gasoline to sources drinking water at major refineries and hundreds of gas stations throughout California.
- Expert witness on two cases involving MTBE litigation.
- Expert witness and litigation support on the impact of air toxins and hazards at a school.
- Expert witness in litigation at a former plywood plant.

With Komex H2O Science Inc., Matt’s duties included the following:

- Senior author of a report on the extent of perchlorate contamination that was used in testimony by the former U.S. EPA Administrator and General Counsel.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of MTBE use, research, and regulation.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of perchlorate use, research, and regulation.
- Senior researcher in a study that estimates nationwide costs for MTBE remediation and drinking water treatment, results of which were published in newspapers nationwide and in testimony against provisions of an energy bill that would limit liability for oil companies.
- Research to support litigation to restore drinking water supplies that have been contaminated by MTBE in California and New York.

- Expert witness testimony in a case of oil production-related contamination in Mississippi.
- Lead author for a multi-volume remedial investigation report for an operating school in Los Angeles that met strict regulatory requirements and rigorous deadlines.

- Development of strategic approaches for cleanup of contaminated sites in consultation with clients and regulators.

Executive Director:

As Executive Director with Orange Coast Watch, Matt led efforts to restore water quality at Orange County beaches from multiple sources of contamination including urban runoff and the discharge of wastewater. In reporting to a Board of Directors that included representatives from leading Orange County universities and businesses, Matt prepared issue papers in the areas of treatment and disinfection of wastewater and control of the discharge of grease to sewer systems. Matt actively participated in the development of countywide water quality permits for the control of urban runoff and permits for the discharge of wastewater. Matt worked with other nonprofits to protect and restore water quality, including Surfrider, Natural Resources Defense Council and Orange County CoastKeeper as well as with business institutions including the Orange County Business Council.

Hydrogeology:

As a Senior Hydrogeologist with the U.S. Environmental Protection Agency, Matt led investigations to characterize and cleanup closing military bases, including Mare Island Naval Shipyard, Hunters Point Naval Shipyard, Treasure Island Naval Station, Alameda Naval Station, Moffett Field, Mather Army Airfield, and Sacramento Army Depot. Specific activities were as follows:

- Led efforts to model groundwater flow and contaminant transport, ensured adequacy of monitoring networks, and assessed cleanup alternatives for contaminated sediment, soil, and groundwater.
- Initiated a regional program for evaluation of groundwater sampling practices and laboratory analysis at military bases.
- Identified emerging issues, wrote technical guidance, and assisted in policy and regulation development through work on four national U.S. EPA workgroups, including the Superfund Groundwater Technical Forum and the Federal Facilities Forum.

At the request of the State of Hawaii, Matt developed a methodology to determine the vulnerability of groundwater to contamination on the islands of Maui and Oahu. He used analytical models and a GIS to show zones of vulnerability, and the results were adopted and published by the State of Hawaii and County of Maui.

As a hydrogeologist with the EPA Groundwater Protection Section, Matt worked with provisions of the Safe Drinking Water Act and NEPA to prevent drinking water contamination. Specific activities included the following:

- Received an EPA Bronze Medal for his contribution to the development of national guidance for the protection of drinking water.
- Managed the Sole Source Aquifer Program and protected the drinking water of two communities through designation under the Safe Drinking Water Act. He prepared geologic reports, conducted public hearings, and responded to public comments from residents who were very concerned about the impact of designation.

- Reviewed a number of Environmental Impact Statements for planned major developments, including large hazardous and solid waste disposal facilities, mine reclamation, and water transfer.

Matt served as a hydrogeologist with the RCRA Hazardous Waste program. Duties were as follows:

- Supervised the hydrogeologic investigation of hazardous waste sites to determine compliance with Subtitle C requirements.
- Reviewed and wrote "part B" permits for the disposal of hazardous waste.
- Conducted RCRA Corrective Action investigations of waste sites and led inspections that formed the basis for significant enforcement actions that were developed in close coordination with U.S. EPA legal counsel.
- Wrote contract specifications and supervised contractor's investigations of waste sites.

With the National Park Service, Matt directed service-wide investigations of contaminant sources to prevent degradation of water quality, including the following tasks:

- Applied pertinent laws and regulations including CERCLA, RCRA, NEPA, NRDA, and the Clean Water Act to control military, mining, and landfill contaminants.
- Conducted watershed-scale investigations of contaminants at parks, including Yellowstone and Olympic National Park.
- Identified high-levels of perchlorate in soil adjacent to a national park in New Mexico and advised park superintendent on appropriate response actions under CERCLA.
- Served as a Park Service representative on the Interagency Perchlorate Steering Committee, a national workgroup.
- Developed a program to conduct environmental compliance audits of all National Parks while serving on a national workgroup.
- Co-authored two papers on the potential for water contamination from the operation of personal watercraft and snowmobiles, these papers serving as the basis for the development of nation-wide policy on the use of these vehicles in National Parks.
- Contributed to the Federal Multi-Agency Source Water Agreement under the Clean Water Action Plan.

Policy:

Served senior management as the Senior Science Policy Advisor with the U.S. Environmental Protection Agency, Region 9. Activities included the following:

- Advised the Regional Administrator and senior management on emerging issues such as the potential for the gasoline additive MTBE and ammonium perchlorate to contaminate drinking water supplies.
- Shaped EPA's national response to these threats by serving on workgroups and by contributing to guidance, including the Office of Research and Development publication, *Oxygenates in Water: Critical Information and Research Needs*.
- Improved the technical training of EPA's scientific and engineering staff.
- Earned an EPA Bronze Medal for representing the region's 300 scientists and engineers in negotiations with the Administrator and senior management to better integrate scientific principles into the policy-making process.
- Established national protocol for the peer review of scientific documents.

Geology:

With the U.S. Forest Service, Matt led investigations to determine hillslope stability of areas proposed for timber harvest in the central Oregon Coast Range. Specific activities were as follows:

- Mapped geology in the field, and used aerial photographic interpretation and mathematical models to determine slope stability.
- Coordinated his research with community members who were concerned with natural resource protection.
- Characterized the geology of an aquifer that serves as the sole source of drinking water for the city of Medford, Oregon.

As a consultant with Dames and Moore, Matt led geologic investigations of two contaminated sites (later listed on the Superfund NPL) in the Portland, Oregon, area and a large hazardous waste site in eastern Oregon. Duties included the following:

- Supervised year-long effort for soil and groundwater sampling.
- Conducted aquifer tests.
- Investigated active faults beneath sites proposed for hazardous waste disposal.

Teaching:

From 1990 to 1998, Matt taught at least one course per semester at the community college and university levels:

- At San Francisco State University, held an adjunct faculty position and taught courses in environmental geology, oceanography (lab and lecture), hydrogeology, and groundwater contamination.
- Served as a committee member for graduate and undergraduate students.
- Taught courses in environmental geology and oceanography at the College of Marin.

Matt taught physical geology (lecture and lab and introductory geology at Golden West College in Huntington Beach, California from 2010 to 2014.

Invited Testimony, Reports, Papers and Presentations:

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Presentation to the Public Environmental Law Conference, Eugene, Oregon.

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Invited presentation to U.S. EPA Region 9, San Francisco, California.

re: Comments on Mitigated Negative Declaration for 550 Piercy Road Industrial Project,
SCH No. 2023060249

Dear Ms. Garg:

Advocates for the Environment submits the comments in this letter regarding the proposed 550 Piercy Road Industrial Project (**Project**), located at the intersection of Piercy Road and Hellyer Avenue. The Project would construct two warehouse buildings totaling 430,000 square feet on a 28.9-acre vacant parcel. We have reviewed the Mitigated Negative Declaration (**MND**) released in June 2023 and submit comments regarding the sufficiency of the MND's Greenhouse-Gas (**GHG**) analysis under the California Environmental Quality Act (**CEQA**).

G-1

CEQA GHG Significance Analysis

The MND derived its GHG significance thresholds from the CEQA Appendix G Guidelines and concluded that the Project's GHG emissions would be less than significant, claiming the Project would be consistent with plans, policies, and regulations for the reduction of GHG emissions because of adherence to the City of San José 2030 Greenhouse Gas Reduction Strategy (GHGRS) Compliance Checklist. Although the MND included precise quantifications for the construction emissions, totaling 276.04 metric tons carbon dioxide equivalent (**MTCO_{2e}**), there was no quantification for the operational emissions included in the MND itself. Yet, Appendix A: Air Quality Assessment included CalEEMod outputs which include a category for CO_{2e}, which was quantified as 3,282.3207 MTCO_{2e} per year. While CEQA does not require that GHG emissions be quantified, the fact that the City conducted modelling to estimate this number yet failed to include it for easy access and reference in the MND itself is misleading and confusing.

G-2

Inconsistent with Applicable Plans, Policies, and Regulations

The City analyzed consistency with the City of San José 2030 Greenhouse Gas Reduction Strategy (**GHGRS**) Compliance Checklist, as detailed in Appendix E. However, the

G-3

Project would be inconsistent with the GHGRS, as well as some of unmentioned applicable plans, and therefore this discussion of consistency is inaccurate. Further, the language of the adopted threshold demands that the EIR analyze the Project’s consistency with all applicable plans, not just a select number of plans that the lead agency prefers. Overall, the City should have concluded that the impact would be significant under and the City must adopt mitigation to the fair share extent.

↑
G-3
Con't

Consistency with the GHG Reduction Strategy Compliance Checklist

The discussion of whether the Project exceeds the GHG significance thresholds was centered on the GHGRS as an applicable plan. The GHGRS consistency analysis exclusively focused on a brief procedure, consistency checklist (**Checklist**), contained in the GHGRS which purportedly analyzes a project’s consistency with the GHGRS to bypass the consistency analysis required by the dual threshold that the lead agency adopted. The Checklist declares that conforming with the steps is sufficient to demonstrate that a project’s contribution to cumulative GHG emissions may be determined not to be cumulatively considerable under CEQA Guidelines sections 15064(h)(3), 15130(d), and 15183(b).

The Checklist largely disregards the GHGRS goals by suggesting that adherence to the Checklist alone is sufficient to demonstrate consistency with the GHGRS. When adhered to, this procedure allows consistency with the GHGRS to be analyzed without considering any of the guidance within the GHGRS. As a result, the MND circumvented analysis of San José’s adopted emission intensity target for 2030, as identified in the GHGRS, which is 2.94 MTCO_{2e} per service population. Because the Project’s net operational GHG emissions minus existing emissions are estimated to be 3,282.32 MTCO_{2e}/year, and the Project will have 160 employees, the Project’s per-capita GHG emissions would be approximately 20.51 MTCO_{2e}/service population, greatly exceeding San José’s emissions intensity from 2017, as well as the future target¹. Therefore, the Project is not compliant with the GHGRS emissions target overall, and compliance with the Checklist cannot, in itself, cure this defect.

↓
G-4

Moreover, although the MND purports to comply with the Checklist, the Project has not sufficiently demonstrated compliance with the Checklist. Therefore, even if the Checklist is deemed a sufficient substitute for the GHGRS itself, the Project is not consistent with the GHGRS because it does not comply with all of the mandatory measures on the Checklist.

↓
G-5

¹ Emissions metrics obtained from CalEEMod summary printouts and service population obtained from the MND.

Project’s mitigated operational emissions = 3,282.32 MTCO_{2e}

5,206.342 MTCO_{2e} ÷ 160 employees = 20.51, rounded to the nearest hundredths-place.

San Jose 2017 Emissions Inventory intensity = 3.96 MTCO_{2e}/service population (GHGRS p. 35)

2030 Emissions Intensity Target = 2.94 MTCO_{2e}/service population (GHGRS p. 51).

According to the descriptions and explanations below each Checklist measure, the Project would not be compliant with seven of the required measures identified in the Checklist.

First, MS-2.2 requires that the Project “encourage maximized use of on-site generation of renewable energy for all new and existing buildings.” The Project anticipates being “solar-ready by including building roof space and conduit infrastructure...per California Code,” which is the bare minimum for the statutory requirements but is far from representative of the “maximized use” of solar panels. Neither the Checklist explanation nor the MND expressed that the amount of solar ready roof space was the maximum or otherwise “maximized” the use of on-site electricity generation.

G-5
Con't

Second, MS-2.7 involves “encourag[ing] installation of solar panels or other clean energy power generation sources over parking areas.” The lead agency responded by saying that “[f]uture tenants within the project would be able to take advantage of incentives that are in place at the time of construction,” without actually including any infrastructure that would encourage the installation of solar panels. For example, simply constructing an overhead canopy to provide space for solar panel installation would encourage the installation of solar panels in parking lots. The lead agency made no effort to demonstrate voluntary actions which would comply with this measure other than encouraging factors that are already in existence and have no relation to the Project, or more specifically, parking areas on the Project site.

G-6

Third, MS-16.2 requires promoting “neighborhood-based” distributed renewable energy. However, the lead agency’s response reflects an individual Project-based renewable energy effort, which is not the same as the community-based strategy outlined in this measure. As this measure requires a community effort to provide an alternate means of investing in renewable energy to groups and individuals who may otherwise not be able to install systems on their own property, to be compliant with this measure the lead agency must demonstrate that they would promote a community effort in some other way beyond simply using renewable energy sources for the Project. It is implied that the energy distributed in a neighborhood-based network should be promoted for all electricity use beyond which is produced on-site. Simply being solar ready does not promote neighborhood-based distribution of renewable energy generation, even if it works toward the goal of reducing energy wasted.

G-7

Fourth, CD-2.1 promotes “the Circulation Goals and Policies in the Envision San José 2040 General Plan” by “[c]reat[ing] streets that promote pedestrian and bicycle transportation by following applicable goals and policies in the Circulation section of the Envision San José 2040 General Plan.” The City responded to this requirement by saying “not applicable,” even though there was no specification that this requirement need not apply to industrial areas. We request that the City provide further clarification for why this requirement is not applicable to this Project.

G-8

Fifth, TR-7.1 requires that “large employers...develop TDM programs to reduce the vehicle trips and vehicle miles generated by their employees through the use of shuttles, provision for car-sharing, bicycle sharing, carpool, parking strategies, transit incentives and other measures.” Here, the future tenant is likely deemed a “large employer,” at an estimated 160 employees. The explanation in the Checklist did not anticipate the preparation of a TDM program but rather vaguely mentioned “VMT reduction measures,” with the only examples being “marketing/education” and “bicycle parking.” The City should further specify all of the reduction measures the Project would use as part of a comprehensive TDM program to be in compliance with this Checklist measure.

G-9

Sixth, TR-8.5 intends for projects to “[p]romote participation in car share programs to minimize the need for parking spaces in new and existing development.” However, rather than discussing the implementation of car share programs, the explanation of the Project’s compliance with this measure made no mention of car share programs in the response, and rather focused on the availability of bike parking spaces and the fact that the Project would include “trip reduction marketing/education.” The purpose of this measure is aimed at minimizing the need for parking spaces, given a set number of employees. Thus, educating the employees about trip reduction would not help due to the employee’s mandatory work schedule, and this requirement is focused specifically on car share programs, which the lead agency completely ignores in response. To be compliant with this measure, the Project should take some active role in car share programs specifically, for its future tenants and their employees to be encouraged to share cars when commuting to work.

G-10

Seventh, MS-19.4 requires that the Project use recycled water “wherever feasible and cost-effective to serve existing and new development.” In response, the lead agency claimed that the Project would “utilize recycled water for the landscaping.” Yet, in an industrial project such as this one, it may be feasible and cost effective to use recycled water for other uses beyond just landscaping, such as for cooling mechanisms for manufacturing, or other uses. Recycled water does not necessarily need to be restricted to landscaping only, and the City’s response should reflect the feasibility of using recycled water for as many uses as would be cost effective, in accordance with this Checklist requirement.

G-11

Ultimately, non-compliance with any one of these requirements would be enough to demonstrate that the City cannot use the Checklist as a way of avoiding analyzing the GHG significance thresholds described in the MND and adopted from CEQA Guidelines Appendix G. Additionally, as previously stated, this MND consistency analysis cannot stand because complying with the Checklist alone is not adequate to show consistency with the GHGRS, which the Project is not consistent with. While the chosen significance threshold adopted from CEQA Guidelines Appendix G encourages comparison between the proposed project and relevant GHG emissions plans, it does not permit an applicable plan to circumvent CEQA

G-12

Guidelines by prescribing its own separate procedure to demonstrate CEQA compliance. Therefore, in any circumstance, the City must show consistency with all applicable plans, including the GHGRS generally, and notwithstanding the Checklist procedure.

↑
G-12
Con't

Consistency with Other Applicable Plans the MND Ignored

The MND did not analyze whether the Project would conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing GHG emissions, based on the purported consistency with the GHGRS. Because it is not consistent with this reduction strategy, the analysis should fall back to the significance thresholds identified in CEQA Appendix G and on page 98 of the MND. Thus, without any changes, this significance analysis violates CEQA by being deficient in several areas, as discussed below.

For example, the analysis should have accounted for consistency with the 2017 Scoping Plan from the California Air Resources Board (**2017 CARB Scoping Plan**), which was developed to facilitate California’s compliance with SB 32, which requires statewide GHG emissions to be reduced to 40% below 1990 levels by 2030 (Health & Safety Code § 38566). The Project is inconsistent with the 2017 CARB Scoping Plan’s goals, including the 2050 goal of 80% below 1990 levels. The 2017 CARB Scoping Plan sets out statewide goals for total GHG emissions targets of 6 MTCO_{2e}/capita by 2030, and 2 MTCO_{2e}/capita by 2050 (CARB Scoping Plan, p. 99). With the Project’s net operational GHG emissions at approximately 3,282 MTCO_{2e} annually, the Project’s per-service population GHG emissions would be 20.51 MTCO_{2e}/capita, greatly exceeding both the 2030 and 2050 CARB 2017 Scoping Plan targets by more than 10 times².

G-13

An agency must consider a project’s land use patterns over time to reasonably evaluate the GHG emissions impacts (*Cleveland Nat’l Forest Foundation v. San Diego Ass’n of Governments* (2017) 3 Cal.5th 497, 513). The MND accounted for a building lifespan of 30 years when amortizing the construction emissions, indicating the expected lifespan of the Project. As the Project will likely be operating well into 2050, that the Project must show consistency with long-term goals to comply with CEQA. Accordingly, to be consistent with the 2017 CARB Scoping Plan, the MND must demonstrate that it is on track to meet its share of the statewide goal of 2 MTCO₂ per capita by 2050.

Under the CEQA Appendix G Guidelines, the Project would have significant GHG emissions if it were to “Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases” This language requires that the MND analyze the Project’s consistency with *all* applicable plans, not just the ones that the lead agency

↓

² All metrics obtained from the MND. $3,282 / 160 = 20.51$, rounded to the nearest tenths-place.

prefers. And there is no demonstration that the Project would be net zero by any point in the operations. The MND itself references this threshold in its analysis. (MND, p. 98.)

In addition to consistency with the 2017 Scoping Plan, the Project must demonstrate consistency with CARB's 2022 Climate Change Scoping Plan (**2022 Scoping Plan**) in order to meet Threshold GHG-2. The 2022 Scoping Plan mandates that all commercial appliances be electric by 2029 (2022 Scoping Plan, p. 75.) This is a requirement that the MND did not address and the City should demonstrate that the Project will meet this requirement with further analysis and specification.

The MND must also analyze consistency with Executive Order B-55-18, which requires the State of California to achieve carbon neutrality—net zero GHG emissions—by 2050. The Project is inconsistent with EO B-55-18 because it will use gasoline, diesel, and natural gas, and burning such non-renewable fuels results in considerable GHG emissions. Because the Project is inconsistent with the 2017 CARB Scoping Plan, 2022 CARB Scoping Plan, and EO B-55-18, its emissions will be significant. Inconsistency under any one of these plans alone would be enough to conclude a significant impact. Under CEQA, therefore, the City must therefore require fair-share mitigation, i.e. the Applicant must fully mitigate all of the Project's GHG emissions. Such mitigations may be on-site (e.g., solar panels), or off-site (e.g., offsets).

We recommend that the City adopt a net-zero threshold for this project, and that the Project be constructed as a net-zero project, where its GHG emissions are fully mitigated, resulting in no net increase. Two of California's largest housing projects, Tejon's Centennial, and Five Points' Newhall Ranch, were built as net-zero projects, after the courts found their EIRs inadequate on GHG emissions. This would require, among other things, eliminating natural-gas use in the Project.

CalEEMod Deficiencies and Inaccurate Quantifications

CalEEMod was used as a model to estimate existing project emissions to serve as the baseline for the Project. The CalEEMod analysis was included in Appendix A to the MND and was inconsistent with the MND itself in two ways. CalEEMod should be rerun to get a more accurate estimation of Project GHG emissions.

At the end of the CalEEMod analysis, a heading for Section 11.0, Vegetation is listed, but there are no parameters for vegetation included. This omission disregards the MND's role as an informative document by attempting to hide the parameters that went into CalEEMod's Vegetation analysis for the Project. Even if the Project site does little modifications to vegetation, the extent to which it makes a difference in the quantification of GHG emissions should still be known to the public and the decision makers by including it in the CalEEMod report. The CalEEMod Vegetation analysis also accounts for variation in soil type for carbon sequestration.

G-13
Con't

G-14

Additionally, there were no operational stationary equipment added to page 82 through 83 of the CalEEMod outputs in Appendix A to the MND. There was no explanation for why this Project would not have any operational equipment to be described in this section, which would be likely given the industrial nature of the Project.

The lead agency should make these changes or justify the missing sections within CalEEMod. When a lead agency quantifies a Project's emissions, it should be accurate and not misleading about the GHG impact of the Project.

↑
G-14
Con't

The City Should Draft an EIR and Mitigate to the Fair Share Level

No mitigation measures were considered for GHGs due to the erroneous determination of less-than-significant impact. However, because the City should have found significant impact for GHG emissions, it should update its findings accordingly and would therefore be required to create a full Environmental Impact Report (EIR) and mitigate to the fair share level.

There are many mitigation measures that can feasibly be adopted. For example, while CalGreen Code and Title 24 Requirements would be met, the Project would not adopt any other feasible green building strategies, such as LEED certification standard. In addition to adhering to green building standards, the Applicant could further mitigate the Project's emissions by incorporating energy-generating features such as rooftop solar panels, or offset emissions through the sponsorship local renewable energy programs. Lastly, the Project could require future tenants to use electric equipment and vehicles to the extent possible, and strictly prohibit idling on the premises.

G-15

Conclusion

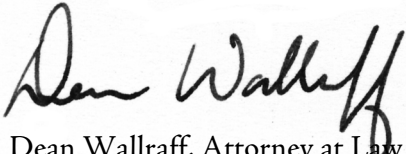

In conclusion, City should not have prepared an MND for this project, but rather should have concluded that there was a likelihood of significant impact on GHG emissions, which would then require that an EIR with full analysis in accordance with CEQA guidelines to be prepared. The MND incorrectly analyzed the Project's consistency with the CARB 2017 Scoping Plan, erroneously concluding that it would not conflict with the goals laid out in that plan. As to other plans, the lead agency assumed, without sufficiently analyzing, that the Project would comply with the measures outlined in applicable plans and policies, but clearly conflicts with those plans. And it entirely ignored several key applicable plans for GHG reductions. An MND was not appropriate for this case because there is a fair argument that the Project may have significant GHG impacts.

G-16

Please put Advocates for the Environment on the list of interested parties to receive updates about the progress of this potential project approval.

RE: City of San Jose's 550 Piercy Road Industrial Development (SCH#: 2023060249)

Dear Tina Garg,

On behalf of the Carpenters Local Union 405 (“**Local 405**”), our Office is submitting these comments on the Initial Study and Mitigated Negative Declaration (“**IS/MND**”) for the City of San Jose’s (“**City**”) 550 Piercy Road Industrial Development Project (“**Project**”).

Per the City’s description, including in the Notice of Intent to Adopt the MND:

“The project application is for a Site Development Permit and Vesting Tentative Map to allow the **construction of two industrial** buildings on a **28.9-acre** single **vacant** parcel located at 550 Piercy Road in San José, California. The **total** square footage of the proposed industrial buildings would be **430,000 square feet**, with **257,149 square feet** for **Building 1** and **172,851 square feet** for **Building 2**. **Additional improvements** for **site circulation, site access, drainage, and infrastructure** are included in the proposed project.”¹ (Emph. added.)

¹ See, <https://www.sanjoseca.gov/your-government/departments-offices/planning-building-code-enforcement/planning-division/environmental-planning/environmental-review/negative-declaration-initial-studies/h22-015-550-piercy-rd-industrial-development-project>; see also the NOI, available at: <https://www.sanjoseca.gov/home/showpublisheddocument/99164/638218069370970000>

Local 405 is a labor union that represents over 4,000 members who live and work in Santa Clara County and has a strong interest in well-ordered land use planning and in addressing the environmental impacts of development projects.

Individual members of Local 405 live, work, and recreate in the City and surrounding communities and would be directly affected by the Project's environmental impacts.

Local 405 expressly reserves the right to supplement these comments at or prior to hearings on the Project, and at any later hearing and proceeding related to this Project. Gov. Code, § 65009, subd. (b); Pub. Res. Code, § 21177, subd. (a); see *Bakersfield Citizens for Local Control v. Bakersfield* (2004) 124 Cal.App.4th 1184, 1199-1203; see also *Galante Vineyards v. Monterey Water Dist.* (1997) 60 Cal.App.4th 1109, 1121.

Local 405 incorporates by reference all comments related to the Project or its CEQA review, including the Initial Study/Mitigated Negative Declaration. See *Citizens for Clean Energy v City of Woodland* (2014) 225 Cal.App.4th 173, 191 (finding that any party who has objected to the project's environmental documentation may assert any issue timely raised by other parties).

Moreover, Local 405 requests that the City provide **advance notice** of any upcoming hearings, as well as for any and all notices referring or related to the Project, as required by the Municipal Code, as well as under the California Environmental Quality Act (**CEQA**) (Pub. Res. Code, § 21000 *et seq.*), and the California Planning and Zoning Law ("**Planning and Zoning Law**") (Gov. Code, §§ 65000–65010). California Public Resources Code Sections 21092.2, and 21167(f) and California Government Code Section 65092 require agencies to mail such notices to any person who has filed a written request for them with the clerk of the agency's governing body. We request that such notice be *both* mailed and e-mailed to us.

I. THE CITY SHOULD REQUIRE THE USE OF A LOCAL WORKFORCE TO BENEFIT THE COMMUNITY'S ECONOMIC DEVELOPMENT AND ENVIRONMENT.

The City should require the Project to be built by contractors who participate in a Joint Labor-Management Apprenticeship Program approved by the State of California and make a commitment to hiring a local workforce.

Community benefits such as local hire can also be helpful to reduce environmental impacts and improve the positive economic impact of the Project. Local hire provisions requiring that a certain percentage of workers reside within 10 miles or less

of the Project site can reduce the length of vendor trips, reduce greenhouse gas emissions, and provide localized economic benefits. As environmental consultants Matt Hagemann and Paul E. Rosenfeld note:

[A]ny local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

March 8, 2021, SWAPE Letter to Mitchell M. Tsai re Local Hire Requirements and Considerations for Greenhouse Gas Modeling.

Workforce requirements promote the development of skilled trades that yield sustainable economic development. As the California Workforce Development Board and the University of California, Berkeley Center for Labor Research and Education concluded:

[L]abor should be considered an investment rather than a cost—and investments in growing, diversifying, and upskilling California’s workforce can positively affect returns on climate mitigation efforts. In other words, well-trained workers are key to delivering emissions reductions and moving California closer to its climate targets.²

Furthermore, workforce policies have significant environmental benefits given that they improve an area’s jobs-housing balance, decreasing the amount and length of job commutes and the associated greenhouse gas (GHG) emissions. In fact, on May 7, 2021, the South Coast Air Quality Management District found that that the “[u]se of a local state-certified apprenticeship program” can result in air pollutant reductions.³

² California Workforce Development Board (2020) Putting California on the High Road: A Jobs and Climate Action Plan for 2030 at p. ii, *available at* <https://laborcenter.berkeley.edu/wp-content/uploads/2020/09/Putting-California-on-the-High-Road.pdf>.

³ South Coast Air Quality Management District (May 7, 2021) Certify Final Environmental Assessment and Adopt Proposed Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions Program, and Proposed Rule 316 – Fees for Rule 2305, Submit Rule 2305 for Inclusion Into the SIP, and Approve Supporting Budget Actions, *available at* <http://www.aqmd.gov/docs/default-source/Agendas/Governing-Board/2021/2021-May7-027.pdf?sfvrsn=10>.

Locating jobs closer to residential areas can have significant environmental benefits. As the California Planning Roundtable noted in 2008:

People who live and work in the same jurisdiction would be more likely to take transit, walk, or bicycle to work than residents of less balanced communities and their vehicle trips would be shorter. Benefits would include potential reductions in both vehicle miles traveled and vehicle hours traveled.⁴

Moreover, local hire mandates and skill-training are critical facets of a strategy to reduce vehicle miles traveled (VMT). As planning experts Robert Cervero and Michael Duncan have noted, simply placing jobs near housing stock is insufficient to achieve VMT reductions given that the skill requirements of available local jobs must match those held by local residents.⁵ Some municipalities have even tied local hire and other workforce policies to local development permits to address transportation issues. Cervero and Duncan note that:

In nearly built-out Berkeley, CA, the approach to balancing jobs and housing is to create local jobs rather than to develop new housing. The city's First Source program encourages businesses to hire local residents, especially for entry- and intermediate-level jobs, and sponsors vocational training to ensure residents are employment-ready. While the program is voluntary, some 300 businesses have used it to date, placing more than 3,000 city residents in local jobs since it was launched in 1986. When needed, these carrots are matched by sticks, since the city is not shy about negotiating corporate participation in First Source as a condition of approval for development permits.

Recently, the State of California verified its commitment towards workforce development through the Affordable Housing and High Road Jobs Act of 2022, otherwise known as Assembly Bill No. 2011 (“**AB2011**”). AB2011 amended the

⁵ Cervero, Robert and Duncan, Michael (2006) Which Reduces Vehicle Travel More: Jobs-Housing Balance or Retail-Housing Mixing? Journal of the American Planning Association 72 (4), 475-490, 482, available at <http://reconnectingamerica.org/assets/Uploads/UTCT-825.pdf>.

Planning and Zoning Law to allow ministerial, by-right approval for projects being built alongside commercial corridors that meet affordability and labor requirements.

The City should consider utilizing local workforce policies and requirements to benefit the local area economically and to mitigate greenhouse gas, improve air quality, and reduce transportation impacts.

II. THE PROJECT WOULD BE APPROVED IN VIOLATION OF THE CALIFORNIA ENVIRONMENTAL QUALITY ACT

A. Background Concerning the California Environmental Quality Act

The California Environmental Quality Act is a California statute designed to inform decision-makers and the public about the potential significant environmental effects of a project. 14 California Code of Regulations (“**CEQA Guidelines**”), § 15002, subd. (a)(1).⁶ At its core, its purpose is to “inform the public and its responsible officials of the environmental consequences of their decisions *before* they are made.” *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 564.

1. *Background Concerning Environmental Impact Reports*

CEQA directs public agencies to avoid or reduce environmental damage, when possible, by requiring alternatives or mitigation measures. CEQA Guidelines, § 15002, subds. (a)(2)-(3); see also *Berkeley Keep Jets Over the Bay Committee v. Board of Port Comes* (2001) 91 Cal.App.4th 1344, 1354; *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553; *Laurel Heights Improvement Assn.*, 47 Cal.3d at p. 400. The EIR serves to provide public agencies and the public in general with information about the effect that a proposed project is likely to have on the environment and to “identify ways that environmental damage can be avoided or significantly reduced.” CEQA Guidelines, § 15002, subd. (a)(2). If the project has a significant effect on the environment, the agency may approve the project only upon finding that it has “eliminated or substantially lessened all significant effects on the environment where feasible” and that any unavoidable significant effects on the environment are

⁶ The CEQA Guidelines, codified in Title 14 of the California Code of Regulations, section 15000 et seq., are regulatory guidelines promulgated by the state Natural Resources Agency for the implementation of CEQA. Cal. Pub. Res. Code, § 21083. The CEQA Guidelines are given “great weight in interpreting CEQA except when . . . clearly unauthorized or erroneous.” *Center for Biological Diversity v. Dept. of Fish & Wildlife* (2015) 62 Cal.4th 204, 217.

“acceptable due to overriding concerns” specified in Public Resources Code section 21081. See CEQA Guidelines, § 15092, subds. (b)(2)(A)-(B).

While the courts review an EIR using an ‘abuse of discretion’ standard, the reviewing court is not to *uncritically* rely on every study or analysis presented by a project proponent in support of its position. *Berkeley Jets*, 91 Cal.App.4th at p. 1355 (quoting *Laurel Heights Improvement Assn.*, 47 Cal.3d at pp. 391, 409 fn. 12) (internal quotations omitted). A clearly inadequate or unsupported study is entitled to no judicial deference. *Id.* Drawing this line and determining whether the EIR complies with CEQA’s information disclosure requirements presents a question of law subject to independent review by the courts. *Sierra Club v. County of Fresno* (2018) 6 Cal.5th 502, 515; *Madera Oversight Coalition, Inc. v. County of Madera* (2011) 199 Cal.App.4th 48, 102, 131. As the court stated in *Berkeley Jets*, prejudicial abuse of discretion occurs if the failure to include relevant information precludes informed decision-making and informed public participation, thereby thwarting the statutory goals of the EIR process. 91 Cal.App.4th at p. 1355 (internal quotations omitted).

The preparation and circulation of an EIR is more than a set of technical hurdles for agencies and developers to overcome. *Communities for a Better Environment v. Richmond* (2010) 184 Cal.App.4th 70, 80 (quoting *Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova* (2007) 40 Cal.4th 412, 449-450). The EIR’s function is to ensure that government officials who decide to build or approve a project do so with a full understanding of the environmental consequences and, equally important, that the public is assured those consequences have been considered. *Id.* For the EIR to serve these goals it must present information so that the foreseeable impacts of pursuing the project can be understood and weighed, and the public must be given an adequate opportunity to comment on that presentation before the decision to go forward is made. *Id.*

A strong presumption in favor of requiring preparation of an EIR is built into CEQA. This presumption is reflected in what is known as the “fair argument” standard under which an EIR must be prepared whenever substantial evidence in the record supports a fair argument that a project may have a significant effect on the environment. *Quail Botanical Gardens Found., Inc. v. City of Encinitas* (1994) 29 Cal.App.4th 1597, 1602; *Friends of “B” St. v. City of Hayward* (1980) 106 Cal.3d 988, 1002.

The fair argument test stems from the statutory mandate that an EIR be prepared for any project that “may have a significant effect on the environment.” PRC, § 21151;

see *No Oil, Inc. v. City of Los Angeles* (1974) 13 Cal.App.3d 68, 75; accord *Jensen v. City of Santa Rosa* (2018) 23 Cal.App.5th 877, 884. Under this test, if a proposed project is not exempt and may cause a significant effect on the environment, the lead agency must prepare an EIR. PRC, §§ 21100 (a), 21151; CEQA Guidelines, § 15064 (a)(1), (f)(1). An EIR may be dispensed with only if the lead agency finds no substantial evidence in the initial study or elsewhere in the record that the project may have a significant effect on the environment. *Parker Shattuck Neighbors v. Berkeley City Council* (2013) 222 Cal.App.4th 768, 785. In such a situation, the agency must adopt a negative declaration. PRC, § 21080, subd. (c)(1); CEQA Guidelines, §§ 15063 (b)(2), 15064(f)(3).

“Significant effect upon the environment” is defined as “a substantial or potentially substantial adverse change in the environment.” PRC, § 21068; CEQA Guidelines, § 15382. A project may have a significant effect on the environment if there is a reasonable probability that it will result in a significant impact. *No Oil, Inc.*, 13 Cal.3d at p. 83 fn. 16; see *Sundstrom v. County of Mendocino* (1988) 202 Cal.App.3d 296, 309. If any aspect of the project may result in a significant impact on the environment, an EIR must be prepared even if the overall effect of the project is beneficial. CEQA Guidelines, § 15063(b)(1); see *County Sanitation Dist. No. 2 v. County of Kern* (2005) 127 Cal.App.4th 1544, 1580.

This standard sets a “low threshold” for preparation of an EIR. *Consolidated Irrigation Dist. v. City of Selma* (2012) 204 Cal.App.4th 187, 207; *Nelson v. County of Kern* (2010) 190 Cal.App.4th 252; *Pocket Protectors v. City of Sacramento* (2004) 124 Cal.App.4th 903, 928; *Bowman v. City of Berkeley* (2004) 122 Cal.App.4th 572, 580; *Citizen Action to Serve All Students v. Thornley* (1990) 222 Cal.App.3d 748, 754; *Sundstrom*, 202 Cal.App.3d at p. 310. If substantial evidence in the record supports a fair argument that the project may have a significant environmental effect, the lead agency must prepare an EIR even if other substantial evidence before it indicates the project will have no significant effect. See *Jensen*, 23 Cal.App.5th at p. 886; *Clews Land & Livestock v. City of San Diego* (2017) 19 Cal.App.5th 161, 183; *Stanislaus Audubon Society, Inc. v. County of Stanislaus* (1995) 33 Cal.App.4th 144, 150; *Brentwood Assn. for No Drilling, Inc. v. City of Los Angeles* (1982) 134 Cal.App.3d 491; *Friends of “B” St.*, 106 Cal.App.3d 988; CEQA Guidelines, § 15064(f)(1).

2. *Background Concerning Initial Studies, Negative Declarations and Mitigated Negative Declarations*

CEQA and CEQA Guidelines are strict and unambiguous about when an MND may be used. A public agency must prepare an EIR whenever substantial evidence supports a “fair argument” that a proposed project “may have a significant effect on the environment.” Pub. Res. Code, §§ 21100, 21151; CEQA Guidelines, §§ 15002, subds. (f)(1)-(2), 15063; *No Oil, Inc.*, 13 Cal.3d at p. 75; *Communities for a Better Environment v. California Resources Agency* (2002) 103 Cal.App.4th 98, 111-112.

Essentially, should a lead agency be presented with a fair argument that a project may have a significant effect on the environment, the lead agency shall prepare an EIR even though it may also be presented with other substantial evidence that the project will not have a significant effect. CEQA Guidelines, §§ 15064, subds. (f)(1)-(2); see *No Oil Inc., supra*, 13 Cal.3d at p. 75 (internal citations and quotations omitted). Substantial evidence includes “enough relevant information and reasonable inferences from this information that a fair argument can be made to support a conclusion, even though other conclusions might also be reached.” CEQA Guidelines, § 15384(a).

The fair argument standard is a “low threshold” test for requiring the preparation of an EIR. *No Oil Inc., supra*, 13 Cal.3d at p. 84; *County Sanitation Dist. No. 2 of Los Angeles County v. County of Kern* (2005) 127 Cal.App.4th 1544, 1579. It “requires the preparation of an EIR where there is substantial evidence that any aspect of the project, either individually or cumulatively, may cause a significant effect on the environment, regardless of whether the overall effect of the project is adverse or beneficial[.]” *County Sanitation, supra*, 127 Cal.App.4th at p. 1580 (quoting CEQA Guidelines, § 15063(b)(1)). A lead agency may adopt an MND only if “there is no substantial evidence that the project will have a significant effect on the environment.” CEQA Guidelines, § 15074(b).

Evidence supporting a fair argument of a significant environmental impact triggers preparation of an EIR regardless of whether the record contains contrary evidence. *League for Protection of Oakland’s Architectural and Historical Resources v. City of Oakland* (1997) 52 Cal.App.4th 896, 904-905. “Where the question is the sufficiency of the evidence to support a fair argument, deference to the agency’s determination is not appropriate[.]” *County Sanitation*, 127 Cal.App.4th at 1579 (quoting *Sierra Club v. County of Sonoma* (1992) 6 Cal.App.4th 1307, 1317-1318).

Further, it is the duty of the lead agency, not the public, to conduct the proper environmental studies. “The agency should not be allowed to hide behind its own failure to gather relevant data.” *Sundstrom*, 202 Cal.App.3d at p. 311. “Deficiencies in the record may actually enlarge the scope of fair argument by lending a logical plausibility to a wider range of inferences.” *Id.*; see also *Gentry v. City of Murrieta* (1995) 36 Cal.App.4th 1359, 1382 (lack of study enlarges the scope of the fair argument which may be made based on the limited facts in the record).

Thus, refusal to complete recommended studies lowers the already low threshold to establish a fair argument. The court may not exercise its independent judgment on the omitted material by determining whether the ultimate decision of the lead agency would have been affected had the law been followed. *Environmental Protection Information Center v. Cal. Dept. of Forestry* (2008) 44 Cal.4th 459, 486 (internal citations and quotations omitted). The remedy for this deficiency would be for the trial court to issue a writ of mandate. *Id.*

Both the review for failure to follow CEQA’s procedures and the fair argument test are questions of law, thus, the de novo standard of review applies. *Vineyard Area Citizens for Responsible Growth v. City of Rancho Cordova* (2007) 40 Cal.4th 412, 435. “Whether the agency’s record contains substantial evidence that would support a fair argument that the project may have a significant effect on the environment is treated as a question of law. *Consolidated Irrigation Dist.*, 204 Cal.App.4th at p. 207; Kostka and Zischke, *Practice Under the Environmental Quality Act* (2017, 2d ed.) at § 6.76.

In an MND context, courts give no deference to the agency. Additionally, the agency or the court should not weigh expert testimony or decide on the credibility of such evidence—this is one of the EIR’s functions. As stated in *Pocket Protectors v. City of Sacramento*:

Unlike the situation where an EIR has been prepared, neither the lead agency nor a court may “weigh” conflicting substantial evidence to determine whether an EIR must be prepared in the first instance. Guidelines section 15064, subdivision (f)(1) provides in pertinent part: if a lead agency is presented with a fair argument that a project may have a significant effect on the environment, the lead agency shall prepare an EIR even though it may also be presented with other substantial evidence that the project will not have a significant effect. Thus, as *Claremont* itself

recognized, [c]onsideration is not to be given contrary evidence supporting the preparation of a negative declaration.

(2004) 124 Cal.App.4th 903, 935 (internal citations and quotations omitted).

In cases where it is not clear whether there is substantial evidence of significant environmental impacts, CEQA requires erring on the side of a “preference for resolving doubts in favor of environmental review.” *Mejia v. City of Los Angeles* (2005) 130 Cal.App.4th 322, 332. “The foremost principle under CEQA is that the Legislature intended the act to be interpreted in such manner as to afford the fullest possible protection to the environment within the reasonable scope of the statutory language. *Friends of Mammoth v. Board of Supervisors* (1972) 8 Cal.3d 247, 259.

B. There Is a Fair Argument that the Project May Have a Significant Traffic Impact

The very nature of the Project, with its substantial proposed construction of two (2) industrial buildings on a 28.9-acre single vacant parcel⁷ indicates that the Project may have significant and severe traffic impacts, thus requiring an Environmental Impact Report. This is further supported by the fact that the Project will generate an estimated 1,989 net daily trips per the Institute of Transportation Engineers (“ITE”) Trip Generation Manual, 10th Edition (2017).⁸

Furthermore, there are numerous deficiencies with the IS/MND and its traffic and transportation analysis.

First, and as underscored by expert Norman L. Marshall, President of Smart Mobility in the August 22, 2023 comment letter regarding the 550 Piercy Road Industrial Development (“**Traffic Expert Letter**”), incorporated herein as **Exhibit D** attached hereto, the IS/MND “greatly underestimates the project’s [Vehicle Miles Traveled (“**VMT**”)] impacts” because “[t]he analysis includes only a portion of commuting VMT and excludes non-commuting VMT.” (**Exhibit D**, pp. 1, 3-10.)

Further yet, as the Traffic Expert observed, the MND understates even the commute it did account for: “The portion of commuting that is included in the MND analysis is also underestimated as demonstrated with Census LODS data that indicate an

⁷ City of San Jose, Initial Study / Mitigated Negative Declaration (June 2023), p. 1.

⁸ *Id.* at pp. 173-175.

average current of 38.3 commute VMT per employee per day to the project area.” (Exhibit D, p. 1.)

As the Traffic Expert Letter belabors this point, the MND’s underestimation of traffic VMT is due to the MND’s reliance on a Tool, which misses all commute:

“Most VMT generated by **primary employment** sites with **few visiting** customers, including the proposed project, is **commute traffic**. For **industrial employment** sites, **truck traffic** VMT is the **second** most important component. There also is **miscellaneous VMT** from **service vehicles, deliveries, and trips** made **by employees** during the workday.

To fulfill the purpose of SB 743, **all**, or at least **most**, of this VMT **should** be counted. The VMT measures calculated in the San Jose VMT Evaluation Tool capture **only a small part** of total VMT.

The VMT measures calculated in the San Jose VMT Evaluation Tool capture only a small part of total VMT.

Figure 1 reproduces an illustration of how VMT per worker is calculated in the Tool. In the example, only half of the commute traffic is counted because the worker stopped for coffee on the way to work. Even if the home-to-coffee segment (#1 in the graphic) is only 100 feet and the coffee-to-work segment (#2) is 50 miles, neither segment is attributed to the project. In this example, it would be much more accurate and useful to also attribute segments 1 and 2 to the project because the coffee stop is likely just a pass-by stop, with no additional VMT, and therefore all the #1 and #2 VMT is attributable to the project as commuting travel.

This methodology is unintuitive to anyone but a travel demand modeler. It results in estimates of 14-15 VMT per worker that grossly underestimate the actual average VMT driven by commuting employees. It cannot be translated into an average commute distance because it counts one-way commutes for some employees and two-way commutes for others. For some employees, it may count no commute VMT at all.

All non-commuting VMT caused by the project is excluded from the metric.” (Exhibit D, p. 3, *emph. added.*)

Second, traffic expert Mr. Marshall states that the IS/MND:

“overestimates baseline non-auto mode share in the project area and overestimates the potential to increase it with minimal mitigation. The existing non-auto auto [sic] mode share in the project area is only 1.2 percent (Census CTPP data), but the MND assumes it to be 5 percent. Then the MND asserts that the addition of a short bike lane and pedestrian improvements at a single intersection would increase non-auto mode share at this location by a factor of five relative to today. This is at least 10 times what the true reduction would be in this location from the proposed mitigation.”

(**Exhibit D**, pp. 1-2, 10-11.)

Third, Mr. Marshall notes that the IS/MND’s VMT analysis and mitigation measures “fail to address the true VMT problem – housing. . . .”, noting that most workers cannot afford to live close enough to the Project Site to walk or bike to work.

(**Exhibit D**, p. 2, 11-12.) Thus, and as Mr. Marshall highlights, if better jobs and housing are not balanced, creating jobs in the Project Site area will significantly increase VMT, and thus a proper methodology is necessary that will accurately estimate the Project’s real VMT impacts. (*Id.*)

Fourth, Mr. Marshall underscores the fact that the IS/MND “uses CalEEMod default average trip lengths of 9.5 miles for home-based work trips, 7.3 for other passenger trips. The 9.5-mile length for work trips is clearly much too low relative to Census data.” (**Exhibit D**, p. 2, 12.) As further noted by the expert, “In the project Census Tract, 98.8 percent of commutes to jobs in the project area are made by auto, with an average occupancy of 1.058. 0.7 percent of the commutes are completed by walking, 0.2 percent by bike, and 0.3 percent by transit.” (**Exhibit D**, p. 9.) Thus, Mr. Marshall concludes that the VMT commute counts should be increased and the GHG emissions should be recalculated. (*Id.*)

In light of the above-noted points, the MND relies on inaccurate data and there is a fair argument that the Project may have significant traffic impacts that are neither accounted for nor mitigated to the level of insignificance, as required to warrant an MND.

In addition to the issues identified in the August 22, 2023 Traffic Expert Letter in **Exhibit D**, the IS/MND acknowledges that the Project’s daily VMT would be 14.69

per worker, which is above the City's VMT Evaluation Tool's 14.37 daily-VMT-per-worker industrial threshold:

“Impact TR-1: The project daily Vehicle Miles Travelled (VMT) generated by the project would be 14.69 per worker, which exceeds the City of San José VMT Evaluation Tool's industrial threshold of 14.37 daily VMT per worker.”⁹

Thus, the IS/MND admits that the project's generated VMT would exceed the significance threshold for industrial employment and therefore result in a significant transportation impact on VMT.¹⁰

To dispose of an EIR, the IS/MND relies on mitigation measure MM TR-1.1 to support its conclusion that the Project would have a less than significant impact with mitigation incorporated as it pertains to CEQA Guidelines Section 15064.3 and its required VMT evaluation of a project's transportation impacts.¹¹ Yet, the mitigation measure MM TR-1.1 is inadequate for an EIR, since it is unenforceable, illusory, and infeasible. It also improperly delegates the City's duty to ensure the reduction of traffic impacts to the Project's Applicant and further improperly delegates the approval of any traffic mitigation plans to the City's Public Works department, rather than the elected decisionmakers. MM TR-1.1 also improperly defers mitigation.

Specifically, mitigation measure MM TR-1.1 states, in full:

“ MM TR-1.1: **Prior to the issuance** of any grading or building permits, the project **applicant** shall prepare **plans** that **illustrate** the **design** of the site enhancements, and shall coordinate with the City's Department of Parks, Recreation, & Neighborhood Services, Department of Transportation, and the Department of Public Works to incorporate the following:

- **Traffic Calming Measures and Bike Access Improvements.** The project development shall include **narrowing** of the **existing roadway lane widths** along **Silicon Valley Boulevard** to implement Class IV **protected bikeways** in **both directions** between **Hellyer Avenue** and **Eden Park Place**. The project also includes the **installation** of the **on-street Class IV bikeway** per City standards along the **project's frontage** along **Hellyer Avenue**. The **bike lanes** would connect the

⁹ *Id.* at pp. 1 & 168.

¹⁰ *Id.*

¹¹ *Id.* at pp. 166, 168.

existing Coyote Creek Trailheads and **encourage** the **use of bicycles** (see Appendix H, Figure 6 for conceptual designs of the planned improvements).

- **Pedestrian Network Improvements.** The pork-chop **island** on the southwest corner at the **Hellyer Avenue** and **Silicon Valley Boulevard** intersection shall be **removed** (see Appendix H, Figure 6). The improvement shall require **tightening** the **corner radius** at the **southeast** corner and **modifying** the **signal** to accommodate **pork chop island removals**. This shall improve the **multi-modal environment** by eliminating unsignalized pedestrian/vehicle conflict points, increasing visibility of pedestrians at the intersection corner, and providing a **safer refuge** for **pedestrians waiting** to use the **crosswalks**. **Final plans** shall be **submitted** and **reviewed** as part of the Public Improvement Plan submitted to the City of San Jose Public Works **prior** to the **issuance of development permits** for the proposed project. Per City specifications, the **Public Improvement Plan** shall describe **all public improvements** in the public right-of-way included under the proposed project. All identified improvements shall be **constructed prior** to the **issuance** of the final occupancy permit.

Final plans shall be **submitted** and **reviewed** as part of the **Public Improvement Plan** submitted to the City of San Jose Public Works **prior** to the **issuance** of development permits for the proposed project. Per City specifications, the **Public Improvement Plan** shall describe all public improvements in the public right-of-way included under the proposed project. All identified improvements shall be constructed prior to the issuance of the final occupancy permit.

Based on the City's VMT Evaluation Tool, the project **applicant shall ensure** that implementation of the **multimodal infrastructure** improvements described above **shall lower** the project **VMT to 14.11 per worker** (a reduction of about 4.8 percent), which would reduce the project's VMT to below the City's threshold of 14.37 VMT per worker.

Prior to the **issuance** of any grading or building permits, the project applicant shall submit the **project design plans showing enhancements** to the City's Department of Parks, Recreation, & Neighborhood Services, Department of

Transportation, and the **Department of Public Works** for review and approval.” (MND, p. 8, *emph. added*.)¹²

As can be evidenced from the above-quoted and emphasized MND statements, the proposed plans are aimed to reduce *employee* VMT and are solely “traffic calming measures and bike access improvements” which involve narrowing existing roadway lane widths to implement protected bikeways in both directions and connecting the bike lanes on existing streets in order to encourage bicycle use.¹³

First, the proposed mitigation measure is illusory, since it only requires the Project Applicant to submit plans and requires the City to review those. It further puts the burden on the Applicant to “ensure” that the proposed changes result in reduction of VMT. Simply put, there is no commitment to mitigation at all. Even under the EIR-related CEQA Guidelines § 15126.4, subd (a)(1)(B), this is improper since, *inter alia*, the City does not commit to mitigation but rather relies on the Applicant to mitigate.

Second, the proposed mitigation measure is illusory also because of its timing: prior to the issuance of permits and does not provide for any *discretionary approval* or hearing. As related, the proposed mitigation measure provides for “approval” of only the enhancement plans, and such approval will be by the Public Works department, apparently without any public hearing.

Third, the proposed mitigation measure improperly finds that the mitigation measures will necessarily reduce the traffic impacts to the level of significance *without* even knowing what those enhancements would be.

Fourth, based on the mitigation measure, it is the Public Works department, if at all, that will be making the finding that the Project’s enhancements proposed by the Applicant will indeed reduce traffic impacts to the level of insignificance. This violates CEQA’s non-delegation provision. Guidelines § 15025(b)(2) (shall not delegate).

Fifth, the mitigation measures are infeasible and illusory since they are based on the assumption that the Project’s *employees* will be taking bikes or just walking to the Project site. It also proposes to *narrow* or *tighten* the roads to accommodate or install

¹² *Id.*

¹³ *Id.*

bike lanes. Yet, at the same time, the MND elsewhere acknowledges that the Project site will attract heavy-duty trucks:

“The project’s trip generation estimates include **258 daily truck trips** generated from operating the proposed project, which are assumed to be **heavy-duty diesel-powered trucks** and a **source of long-term DPM emissions**. These trucks would travel to and from the site and are anticipated to **idle onsite for 5 minutes** for each trip. Daily passenger vehicle trips generated by the project would not generate a significant amount of TAC emissions and were not included in the analysis.” (MND, p. 48.)

In addition, the MND speaks about the need for wider roads to accommodate the passage or turns of such trucks:

“Both driveways on Hellyer Avenue would be **45 feet wide** and have been **designed to accommodate large freight trucks turning** in and out of the driveways. Due to the **turn restriction** at the southern driveway on Hellyer Avenue, it is expected that the **majority of project traffic** would access the project site from **Hellyer Avenue** using the northern driveway. The northern/western driveway on Piercy Road would be **45 feet wide** and the southern driveway would be **26 feet wide**. The wider northern driveway would be able to accommodate **large freight trucks**. Based on the distribution of the proposed on-site vehicle parking (see Figure 4), it is assumed both driveways on Piercy Road would be used by vehicles equally.” (MND, p. 170, *emph. added.*)

As such, the MND’s sole traffic mitigation measure *assumes* that the Project’s future-employees will ride bikes or walk to the Project site on roads that will be also used by large freight trucks. There is no assurance that employees will indeed do so. It is also reasonably foreseeable that employees will not take bikes or walk to the Project site at a minimum due to the road safety concerns as well as concerns about being exposed to a high level of diesel emissions, air and GHG impacts from such heavy trucks on the road. CEQA requires that in such cases of doubt the agency should resolve those in favor of an EIR. *Nelson v. County of Kern* (2010) 190 CaLApp.4th 252, 282.

The above-noted flaws violate CEQA's standard for MNDs under PRC § 21064.5 to show that: "(1) **revisions** in the project plans or proposals made by, or agreed to by, the applicant **before** the proposed negative declaration and initial study are **released** for public review **would avoid** the **effects** or **mitigate** the **effects** to a **point** where **clearly no** significant effect on the environment would occur, and (2) **there is no substantial evidence** in light of the whole record before the public agency that the project, **as revised, may have** a significant effect on the environment." (Emph. added.)

Sixth, the proposed mitigation measure is improperly deferred and vague as it defers the formulation of mitigation measures or final design thereof to a later time, shifts that burden to the Applicant, and further does not explain how providing bikeways will in fact "clearly" reduce VMT to the level of insignificance, as required for an MND. As stated earlier, the MND fails to meet CEQA's pre-conditions and requirements even in case of an EIR. CEQA forbids deferred mitigation. Guidelines § 15126.4(a)(1)(B). CEQA allows deferral of details of MMs only "when it is impractical or infeasible to include those details during the project's environmental review." (*Id.*) CEQA further requires: "that the agency (1) commits itself to the mitigation, (2) adopts specific performance standards the mitigation will achieve, and (3) identifies the type(s) of potential action(s) that can feasibly achieve that performance standard..." Guidelines § 15126.4(a)(1)(B). City failed all these preconditions and requirements, as its MND failed to show why the development of the traffic calming plans or pedestrian improvements cannot be developed before the issuance of the MND, what impacts they will have individually or cumulatively, if those would indeed be feasible, and the specific performance criteria the Applicant will have to meet. Moreover, as noted earlier, the City clearly did not commit to mitigation, since all it would do, per the mitigation measure, is review and approve the proposed plans of the Applicant.

Furthermore, the mitigation measure relies on some future coordination with other public entities aside from the City to implement the mitigation measure and does not show how this measure will be enforced. For example, there is no requirement that the Applicant report the number of employee trips after the bike lanes and pedestrian improvements are in place and ensure that the VMTs are indeed reduced to the level of insignificance.

In addition, the mitigation measure calls for “pedestrian network improvements” which involve:

“[t]he pork-chop island on the southwest corner at the Hellyer Avenue and Silicon Valley Boulevard intersection [to] be removed . . . The improvement shall require tightening the corner radius at the southeast corner and modifying the signal to accommodate pork chop island removals. This shall improve the multi-modal environment by eliminating unsignalized pedestrian/vehicle conflict points, increasing visibility of pedestrians at the intersection corner, and providing a safer refuge for pedestrians waiting to use the crosswalks.”¹⁴

However, yet again, this mitigation measure fails to explain how simply encouraging pedestrian travel will actually discourage vehicle travel and thus cause an actual decrease in VMT resulting from the Project and thus result in a less than significant impact on traffic and transportation.

Even further, the IS/MND states that, per the City’s VMT Evaluation Tool, the Project Applicant will then “ensure that implementation of the multimodal infrastructure improvements described above shall lower the project VMT to 14.11 per worker (a reduction of about 4.8 percent), which would reduce the project’s VMT to below the City’s threshold of 14.37 VMT per worker.”

However, the foregoing measure is impermissibly vague and improperly defers the actual reduction in VMT to some later unspecified date without showing *how* these proposed measures would reduce VMT.

Yet another flaw in the City’s traffic impact analysis is its reliance on SB 743 to disregard traffic congestion. The City claims it provides level of service analysis for information purposes only. (MND, p. 173-176.) And yet, SB 743 on its face does not apply to *industrial* projects here, but rather to commercial and residential projects only. Further, as evidenced by the MND, the level of service will definitely deteriorate with the Project and at least two intersections will go from Level C to Level D, i.e., worsen. (MND, p. 176.) Yet, the City claims the traffic impacts will be less than significant.

¹⁴ MND, pp. 1 & 168.

A related flaw in the City's analysis is that it appears to rely on some 2006-year approved *related* project and traffic study, without even disclosing what kind of CEQA clearance did the prior project have:

“City staff have determined that the project is **not required to analyze any signalized intersections** for potential adverse effects since the amount of industrial development proposed for the site (which is located in Edenvale Sub-Area 3) **has already been approved** as part of the **EADP**. The project is, however, required to report intersection levels of service under existing, background, and background plus project conditions for informational purposes. The results of the intersection level of service evaluation (see Table 25) show that all of the signalized study intersections are currently operating at acceptable levels of service during the AM and PM peak hours of traffic and would continue to operate acceptably under background and background plus project conditions. The following eight intersections were studied:” (MND, p. 175, *emph. added.*)

Elsewhere, the MND explains about the EADP as being approved in 2006:

The project site is located within the **Edenvale Area Development Policy (EADP)** boundaries. With **approval** of the nearby **iStar development** proposal in **2006**, **additional 494,000** square feet of potential industrial development **was approved** for future industrial/R&D/office development within Edenvale Sub-Areas 1 and 3. The 494,000 square feet of potential industrial development is **an addition** to the approximately **2.9 million square feet** of existing capacity remaining for Sub-Areas 1, 3, and 4 per the **original EADP**. The project site is located in Edenvale Sub-Area 3, which means the site **already has approval for industrial development** as part of the **EADP**. The **traffic study** that was **completed** for the iStar development identified intersection improvements based on full buildout of the 494,000 square feet of industrial development. The **necessary intersection improvements** that were **identified** have **already been completed**. For this reason, the **project is not required** to analyze **any signalized intersections for potential adverse effects** due to the project. The project is, however, required to report the intersection levels of service under

existing, background, and background plus project conditions for informational purposes. Under the EADP, the site would have a maximum of 530,554 square feet of industrial space.” (MND, p. 161, *emph. added.*)

As evidenced above, the City relies on a 2006 traffic study and an *unidentified* CEQA clearance for the 2006 EADP approval to find the Project will have no traffic impacts or no further analysis of *signalized* intersections is required. The MND must disclose what CEQA clearance was used for the EADP approval, and – to the extent it seeks to tier off of that CEQA review – it also must disclose any subsequent changes that should trigger and additional analysis.

In addition, the City must analyze the *cumulative impact* of the iStar development proposal and the feasibility of the traffic mitigation measures, in light thereof.

Finally, also given that construction of the Project itself may result in road closures and detours, there is a fair argument that the Project may have significant traffic impacts which should be assessed in an EIR pursuant to CEQA.

For the reasons set forth above, including those detailed in the August 22, 2023 Traffic Expert Letter in **Exhibit D**, fully incorporated herein, the IS/MND fails to actually show that the Project’s traffic impact will actually be mitigated to a less than significant level with the incorporation of the proposed mitigation measure. In fact, the MND shows the opposite. As such, there is substantial evidence to support a fair argument that the Project may have traffic impacts, necessitating an EIR under CEQA.

C. There Is a Fair Argument that the Project May Have a Significant Air Quality, Greenhouse Gas Emission, Water, Noise, Hazards, Human Health, and Wildlife/Biological Impacts, and Cumulative Impacts, Requiring Mandatory Findings of Significance and an EIR.

Since the Project may have significant traffic impacts that are not accurately disclosed in the MND, then its traffic-related impacts are also derivatively understated and may be significant, requiring an EIR.

There is an acknowledged direct correlation between the increase in traffic impacts and an increase in their associated air quality, greenhouse gas emission (“**GHG**”), and noise impacts. See e.g., *City of Redlands v. County of San Bernardino* (2002) 96 Cal.App.4th 398, 413, “it is reasonable to assume” that a project enabling physical

residential development would have reasonably foreseeable indirect air and other impacts.

As stated in the Office of Planning Research's ("OPR") technical advisory in 2018:

"VMT and Greenhouse Gas Emissions Reduction. Senate Bill 32 (Pavley, 2016) requires California to reduce greenhouse gas (GHG) emissions 40 percent below 1990 levels by 2030, and Executive Order B-16-12 provides a target of 80 percent below 1990 emissions levels for the transportation sector by 2050. The transportation sector has three major means of reducing GHG emissions: increasing vehicle efficiency, reducing fuel carbon content, and reducing the amount of vehicle travel."

Similarly, there is an acknowledged nexus between the increase of traffic and an increase in related air quality, GHG impacts, noise, water/flooding impacts and impacts on human health and natural environment, including wildlife and waterways. As described in the 2018 OPR Technical advisory:

"VMT and Other Impacts to Health and Environment. VMT mitigation also creates substantial benefits (sometimes characterized as "co-benefits" to GHG reduction) in both in the near-term and the long-term. Beyond **GHG emissions, increases in VMT** also impact **human health** and the **natural environment**. Human health is impacted as increases in **vehicle travel** lead to **more vehicle crashes, poorer air quality**, increases in chronic diseases associated with reduced physical activity, and worse mental health. Increases in vehicle travel also negatively affect other road users, including pedestrians, cyclists, other motorists, and many transit users. The **natural environment is impacted** as **higher VMT** leads to more collisions with wildlife and fragments habitat. Additionally, development that leads to more vehicle travel also tends to consume **more energy, water, and open space** (including farmland and sensitive habitat). This increase in impermeable surfaces **raises the flood risk** and **pollutant transport into waterways.**"

As such, there is a fair argument that the Project here may have significant traffic, air, GHG, energy, water, noise and other impacts, including impacts on human beings and natural environment.

The IS/MND ultimately concludes that the Project will have a less than significant impact with regards to GHG emissions based on the IS/MND's reliance on the Project's consistency with the City's 2030 GHG Reduction Strategy, inclusion of a designated rooftop space and conduit infrastructure on the industrial buildings for solar panels, participation in the City's Zero Waste Strategic plan, installation of high-efficiency appliances and fixtures, utilization of water efficiency landscaping species and equipment, and its consistency with the General Plan and compliance with green building ordinances and energy efficiency measures.¹⁵ However, the Project's mere implementation of GHG reduction strategies and reliance on regulations is insufficient to conclude that the Project will have a less than significant GHG emission impact, as these measures are not specific to *this* Project.

That the Project may have air quality and GHG emission impacts is also evidenced by the recent BAAQMD thresholds, according to which "If the project includes any of the operational screening criteria above [including industrial sources or activities], then the lead agency would need to perform a detailed assessment of the project's criteria air pollutant and precursor emissions."¹⁶ Yet, the MND concludes that the Project will have *neither* GHG nor air quality impacts.

The Project may further have severe **GHG and air quality** impacts, in light of its traffic mitigation measure which assumes that the employees will have to bike or walk to the Project site and thereby be exposed to the high level of diesel emissions of heavy trucks both at the Project site and the nearby industrial sites, such as the iStar development project the MND mentions. Such increased GHG emissions and air quality impacts may also occur in light of the fact that the Project proposes narrowing roads as traffic calming methods, which reasonably foreseeably – along with the trucks and bikes riding on the same roads – will create congestion on the roads and idling of the heavy-duty trucks, as well as other vehicles.

The Project may also have **hazards impacts**, in light of potential soil contamination due to prior agricultural work and use of pesticides. The Project's Phase I ESA, for this purpose, discloses such potential. (Phase I ESA, p. 10.) And yet, Phase I ESA does not adequately study that potential as, *inter alia*, it relies on some "[s]oil samples [that] were collected in 2000 from 38 borings that were advanced on-Site and on

¹⁵ IS/MND, *supra*, at pp. 98-99.

¹⁶ BAAQMD, Chapter 4, p. 4-3; see available at: [Bay Area Air Quality Management District California Environmental Quality Act Air Quality Guidelines \(baaqmd.gov\)](https://www.baaqmd.gov/California-Environmental-Quality-Act-Air-Quality-Guidelines)

adjacent property to the southwest (Clayton, 2000).” (Phase I ESA, p. 10.) Phase I ESA also found traces of asbestos in the soil and, for that purpose, proposed a limited Phase II ESA. (Phase I ESA, p. 11.) Further, Phase I ESA prepared in 2021 uses the *older* ASTM standard: “The scope of work presented in the Agreement was prepared in general accordance with ASTM E 1527-13...” (Phase I ESA, p. 1.)

This omission is particularly critical and makes the Phase I ESA tellingly inaccurate and erroneous, since as of 2021 (post-dating the September 10, 2020 ESA Phase I assessment), ASTM has revised its standards, and as of 2022, EPA¹⁷ has adopted ASTM’s new and more expansive definition of REC. Thus:

- “Under **ASTM E1527-13**, a REC is defined as the **presence** or **likely presence** of **any hazardous substances** or petroleum products in, on, or at a property: (1) due to **release** to the environment; (2) under **conditions indicative** of a release to the environment; or (3) under conditions that **pose a material threat** of a future release to the environment.
- Under **ASTM E1527-21**, a REC means (1) the **presence** of hazardous substances or petroleum due to a release to the environment; (2) the **likely presence** of hazardous substances or petroleum products due to a **likely release** to the environment; or (3) the presence of hazardous substances or petroleum products under conditions that pose a material threat of a future release to the environment. Further, the new standard provides clarifying discussion notes and examples to assist the environmental professional in applying the definition. Together, the new definition and interpretations direct a consultant to rely on the environmental professional’s experience regarding the **likelihood** of certain conditions resulting in releases, such as the long term operation of a dry cleaner, instead of discounting that professional experience based on the lack of current “indications of a release.”¹⁸ (ital. original, bold emphasis added.)

¹⁷ <https://www.govinfo.gov/content/pkg/FR-2022-03-14/pdf/2022-05259.pdf>

¹⁸ <https://www.quarles.com/publications/epa-approves-astm-e1527-21-phase-i-esa-standard-for-all-appropriate-inquiry/>

Lastly, Phase I ESA is silent on vapor intrusion REC, which study is specifically mandated by ASTM and EPA since 2013 under the EPA Final Rule.^{19, 20} Thus, in its Final Rule in 2013, EPA states:

EPA believes that ASTM E1527–13 improves upon the previous standard and reflects the evolving best practices and level of rigor that will afford prospective property owners necessary and essential information when making property transaction decisions and meeting continuing obligations under the CERCLA liability protections.

In particular, the new ASTM E1527–13 standard enhances the previous standard with regard to the delineation of historical releases or recognized environmental conditions at a property and makes important revisions to the standard practice to clarify that all appropriate inquires and **phase I environmental site assessments must include**, within the scope of the investigation, an **assessment of the real or potential occurrence of vapor migration and vapor releases on, at, in or to** the subject property.

Federal Register, Volume 78, No. 250, December 30, 2013, p. 3 (Emph. Added).

As such, the Phase I ESA's reliance on a soil sample in 2000 and failure to consider a more comprehensive ASTM E1527-21 suggests that the Project site may have hazards impacts that have not been studied and accounted for. Needless to say that, per the Phase I ESA, the Project had to be a *commercial* one – rather than industrial. Also, to the extent the Phase I ESA relies on the 2000-year boring studies, it must be missing the potential impacts from the nearby industrial developments post year 2000. All of these factors suggest the Project may have hazards impacts, which may also translate into adverse impacts to human beings, including employees of the Project site as well as other human beings and sensitive receptors, including during the Project's construction, grading, and dirt-hauling phase.

As for **water impacts**, the MND acknowledges that the Project site soils may be contaminated, including with asbestos. As such, to the extent the Project's grading affects the underground waters, there is a reasonable foreseeability that the Project may have water effects. Moreover, based on the MND, the Project will require

¹⁹ <https://www.epa.gov/ust/petroleum-vapor-intrusion>

²⁰ <https://www.govinfo.gov/content/pkg/FR-2013-12-30/pdf/2013-31112.pdf>

disturbance of soil on 28.9 acres of land, and include removal of trees. As such, the Project may affect the natural drainage patterns and thus have water/hydrology impacts.

Lastly, as for **wildlife and biological impacts**, the MND discloses that the Project site may have various protected species but proposed inadequate mitigation measures, suffering from the same flaws as the traffic mitigation measures above. To name a few problems, the MND acknowledges that the Project site may accommodate American badger species, and yet its proposed mitigation measure MM-BIO-1a only requires that a Qualified Biologist – unclear when – shall conduct an Employee Education Program for the construction crew and educate the construction workers on identifying the special-status species and applying unidentified mitigation measures. (MND, p. 2.) Further, the MND provides that the Qualified Biologist will check if the site has active dens for the American badger, and if no active dens are found, then no mitigation is required. There is no enforcement mechanism by the City – all that the City must do is to review the Qualified Biologist’s provided documentation of the education to construction workers and findings. It is even unclear if the Qualified Biologist will be identified by the Applicant or the City. The MND’s mitigation measures for nesting raptors, other migratory birds, or Western burrowing owls are similarly inadequate, unenforceable, and illusory. (MND, pp. 2-5.)

In sum, the MND’s findings of no impacts, including but not limited to impacts in air quality and GHG emissions, are clearly erroneous, and an EIR is required to not only disclose the Project’s respective impacts, but also relate those to the adverse health impacts and impacts to the human beings that the Project may have. *Sierra Club v. County of Fresno* (2018) 6 Cal.5th 502.

In addition, the above-noted impacts to human beings, as well as the fact that the Project may have cumulative impacts with related projects, such as the iStart Development identified in the EIR, these impacts by themselves require mandatory findings of significance and an EIR under CEQA Guidelines 15065. The City’s summary denial of such mandatory significance impacts (MND, p. 9) is conclusory and unsupported, in light of the above-mentioned evidence.

D. There Is a Fair Argument that the Project May Have a Significant Noise Impact

The Project proposes to construct two (2) industrial buildings totaling approximately 430,000 square feet.²¹ Yet, while the IS/MND ultimately concludes that the Project will have a less than significant impact on noise or a less than significant impact on noise with mitigation incorporated, the IS/MND fails to actually incorporate any mitigation measures in its noise analysis.²² In fact, the Noise Assessment in Appendix G (“**Noise Assessment**”) of the IS/MND explicitly concludes that no mitigation is required with regards to each impact discussed.²³

Furthermore, where the Noise Assessment does find that there will be a significant noise impact, it relies on the Project’s “implementation of GP Policy EC-1.7, Municipal Code requirements, and the City’s Standard Permit Conditions” to conclude that the Project’s “temporary construction noise impacts would be reduced to a less-than-significant level.” However, it is improper for the Project Applicant to merely rely on its compliance with regulations to conclude that the Project will have a less than significant impact for a number of reasons. For example, noise regulations do not capture all the noise impacts of the Project, including construction and operation. Moreover, the regulatory measures are not Project-specific and are focused on the Project itself – as such, they fail to consider the Project-specific issues (such as location, size, proposed mitigation measures) as well as the Project’s *cumulative* impacts along with other related projects. Also, the MND’s traffic impacts are understated, and therefore traffic noise is understated and left unaccounted for. Thus, an EIR is required to study the Project’s noise impacts and to determine whether those will be significant.

As stated in CEQA, Guidelines 15126.4(a)(1)(B), “[c]ompliance with a regulatory permit or other similar process may be identified as mitigation if compliance would result in implementation of measures that would be reasonably expected, based on substantial evidence in the record, to reduce the significant impact to the specified performance standards.” See also, *Californians for Alternatives to Toxics v. Department of Food & Agric.* (2005) 136 Cal.App.4th 1 (the court set aside an EIR for a statewide

²¹ *Id.* at p. 1.

²² *Id.* at pp. 130-148.

²³ See, IS/MND Appendix G Noise/Vibration Assessment (May 4, 2023), pp. 23, 29, and 31-32 (concluding no further mitigation required for each impact listed).

crop disease control plan because it did not include an evaluation of the risks to the environment and human health from the proposed program but simply presumed that no adverse impacts would occur from use of pesticides in accordance with the registration and labeling program of the California Department of Pesticide Regulation); *Ebbetts Pass Forest Watch v Department of Forestry & Fire Protection* (2008) 43 Cal. App. 4th 936, 956 (fact that Department of Pesticide Regulation had assessed environmental effects of certain herbicides in general did not excuse failure to assess effects of their use for specific timber harvesting project).

In addition, the Project's reliance on regulatory compliance with the referenced regulations is misplaced because there is no evidence that such ordinances were to control noise outside of the building's envelope, such as e.g., traffic noise or increase in ambient noises due to the Project's construction and operation. *California Clean Energy Committee v. City of Woodland* (2014) 225 Cal.App.4th 173, 210 (the building codes do not address the question of whether the Project is even *safe* to build, "whether a building should be constructed at all, how large it should be, where it should be located, whether it should incorporate certain resources, or anything else external to the building's envelope.")

Accordingly, there is a fair argument that the Project may have a significant noise impact and as such, the Project's potential noise impacts should be thoroughly analyzed and evaluated in an Environmental Impact Report pursuant to CEQA.

E. There Is a Fair Argument that the Project May Have a Significant Biological Resources Impact

There is ample record evidence to support a fair argument that the Project may have a significant biological resources impact.

First, the IS/MND's Biological Resources impact analysis relies on an inadequate biological field survey contained in the Appendix B Biological Resources Report prepared by Denise Duffy & Associates, Inc. ("**Report**") that is described in insufficient detail.

For example, the Report indicates that only *one* field survey was conducted with regards to biological resources. Per the Report, a survey of the Project Site was conducted on June 24, 2022 "to characterize site habitat features and to identify any

special-status plant or wildlife species or suitable habitat for these species within the site.”²⁴ Further, the Report states that the field survey involved:

“walking the project site to identify general habitat and potential sensitive habitat type, conducting an assessment of potential wetlands and other waters, conducting a reconnaissance-level habitat survey to identify any special-status wildlife species or suitable habitat for special-status plant and wildlife species occurring within the site, and conducting a focused survey for perennial and late spring-blooming special-status plant species.”²⁵

Thus, the field survey seems to indicate that a visual inspection was done during this site visit. However, this field survey is insufficient for a number of reasons.

As a preliminary matter, *one* (1) single field survey alone is insufficient to adequately identify all the potential sensitive habitat types, wetlands, or other special-status wildlife species or suitable habitats for special-status plant and wildlife species occurring within the 28.9-acre Project Site (MND, p. 1), as the site survey purports to have looked for.

Even further, the Report fails to indicate the *length* of time that was spent for this field survey and therefore leaves open the possibility that certain species would not be observed on the single occasion that the survey was conducted but nevertheless could be present at the site. Moreover, the Report does not specify *what time* of the day the survey was conducted and, again, leaves open the possibility that certain species, for example, nocturnal species, could present themselves at different times of the day.

In addition, by conducting only one (1) single survey, there is a fair argument that the surveyor could have missed and failed to identify species that would only present themselves during certain times of the year. This survey was conducted on June 24, 2022 which is during the summer. However, there may be certain plant or animal species that would not be identifiable to an observer during the summer months but that could nevertheless be present at the Project Site and identifiable during other seasons in the year.

These inconsistencies are further confirmed by Independent Biological Resources Consultant Scott Cashen, M.S. in a July 27, 2023 comment letter (“**Biological Expert**

²⁴ IS/MND, Appendix B, p. 6.

²⁵ *Id.*

Letter”²⁶ on the IS/MND attached hereto as **Exhibit E** and fully incorporated herein by reference. (See **Exhibit E**, p. 2.) In the Biological Expert Letter, Expert Scott Cashen points to the failure of the IS/MND to identify the time of day of the survey, the surveyor’s qualifications, and the amount of effort such as man-hours spent on the plant and animal identification at the Project Site. (*Id.*)

Accordingly, with only one (1) field survey being conducted, and without any information as to how this field survey was conducted or for how long, there is insufficient information to determine whether or not any special-status plant or wildlife species, or any suitable habitats for those species, are in fact present at the Project Site.

Therefore, the IS/MND’s reliance on a survey not in compliance with California Department of Fish and Wildlife’s (“**CDFW**”) survey guidelines²⁷ and its misuse of the California Natural Diversity Database resulted in potentially inaccurate determinations. For example, with regards to botanical field surveys, the CDFW’s survey guidelines state that such field surveys should be conducted in a way that will maximize the likelihood of identifying special status plants and sensitive natural communities that may be present at a site.²⁸ Specifically, the guidelines state that “[m]ore than one field visit is usually necessary to adequately capture the floristic diversity of a project area.”²⁹

Accordingly, the IS/MND’s findings as to the Project’s biological impacts are not supported with substantial evidence that is of verifiable or credible value and the IS/MND must reassess those impacts, including on the wildlife species with potential to occur on the Project Site using protocol-level detection surveys and describing those additional surveys with sufficient detail.

²⁸ *California Natural Resources Agency, supra*, at p. 4.

²⁹ *Id.*

Second, and as highlighted in the Biological Expert Letter, the Project fails to comply with the terms of the Santa Clara Valley Habitat Plan (“**SCVHP**”). (**Exhibit E**, p. 3.) As expert Cashen notes, most of the Project Site lies within one of SCVHP’s “Plant Survey Areas” and yet the Project site survey failed to conform to the SCVHP terms as it “was not conducted during the appropriate survey period for fragrant fritillary or smooth lessingia (two of the covered plant species), both of which have the potential to occur at the site.” (*Id.*) Further, Mr. Cashen points out that there was “no evidence that the survey was conducted when other special-status plant species were detectable (if present), because the surveyor did not visit nearby reference sites to confirm the target species were evident and identifiable at the time of the botanical field survey.” (*Id.*)

Third, the Biological Expert Letter confirms that the one (1) single survey lacks “sufficient data to infer presence (or absence) and seasonal use patterns of burrowing owls at the Project site. As a result, the City does not have the data needed to make a valid determination on the significance of the Project’s impacts on burrowing owls.” (**Exhibit E**, p. 4.) Further, the Biological Expert Letter references CDFW’s 2012 Staff Report on Burrowing Owl Mitigation and its recommendation of conducting three (3) separate surveys based on breeding and non-breeding season as well as “detection surveys.” (*Id.*)

Fourth, the Biological Expert Letter identifies flaws in various impacts analyses conducted with regards to biological resources, including those pertaining to rare plants, the American badger, the burrowing owl, the Crotch bumble bee, western bumble bee, the loggerhead shrike, the Swainson’s hawk, wildlife movement, invasive plants, and cumulative impacts. (**Exhibit E**, pp. 4-14.) These errors further enlarge the scope of the fair argument that the Project may have biological impacts.

Fifth, the Biological Expert Letter, incorporated herein, identifies a number of deficiencies in the proposed mitigation measures, including MM BIO-1b, MM BIO-2, and MM BIO-3. (**Exhibit E**, pp. 14-18.) For example, with regards to MM BIO-1b, which calls for a qualified biologist to conduct “focused pre-construction surveys for badger dens no more than two weeks prior to construction in all suitable habitat proposed for construction, ground disturbance, or staging. If no potential badger dens are present, no further mitigation is required.” (*Id.*) Thus, Mr. Cashen concludes that the survey being conducted up to two (2) weeks before construction activities begin “does not ensure Project impacts to occupied badger dens would be avoided.” (*Id.*)

As another example, regarding MM BIO-2, Mr. Cashen notes that this mitigation measure is inconsistent with the Project's construction schedule that is described in the IS/MND and thus is incapable of being implemented for the Project. (**Exhibit E**, *supra*, p. 16.)

As shown by the evidence above, the Project's impacts on biological resources are not adequately studied in light of missing information about the details of conducted survey, the large size of the parcel and the fact that a survey, if at all, occurred on only one day at unspecified day or time. As earlier noted, "Deficiencies in the record may actually enlarge the scope of fair argument by lending a logical plausibility to a wider range of inferences." *Sundstrom v. County of Mendocino* (1988) 202 Cal.App.3d 296, 311; *Gentry v. City of Murrieta* (1995) 36 Cal.App.4th 1359, 1378–1379 (same). Lack of study enlarges the scope of the fair argument which may be made based on the limited facts in the record. *Id.* at 1382.

Moreover, as shown by the evidence above, there is a fair argument that the mitigation measures for acknowledged potential biological impacts are illusory, vague, infeasible, or ineffective. *Save the Agoura Cornell Knoll v. City of Agoura Hills* (2020) 46 Cal.App.5th 665, 686 ("*Agoura*").

For each of the foregoing reasons, in addition to the other deficiencies highlighted in the Biological Expert Letter, incorporated herein, there is a fair argument that the Project may have a significant impact on biological resources, including because the MND's identified impacts to biological resources cannot be mitigated to insignificant levels. As such, the City must prepare an EIR pursuant to CEQA.

That an EIR is required here is further confirmed by the very low threshold fair argument standard to prepare an EIR in case of an MND, as here. With *fair argument* standard, neither the agency, nor the court should weigh the evidence; that is the "function of an EIR." *Pocket Protectors v. City of Sacramento* (2004) 124 Cal.App.4th 903, 935 ("*Pocket*"); *Agoura, supra*, 46 Cal.App.5th at 689-690 (same). "Review is de novo, with a preference for resolving doubts in favor of environmental review." *Aptos Council v. County of Santa Cruz* (2017) 10 Cal.App.5th 266, 289; *Pocket, supra*, 124 Cal.App.4th at 928 (same); *Agoura*, at 696 (same).

III. CONCLUSION

Based on the foregoing, the City should deny the Project's proposed entitlements and require that an Environmental Impact Report be prepared pursuant to CEQA, consistent with the comments and issues identified in this comment letter.

Sincerely,

Stephanie Papayanis, Esq.

Subject: Local Hire Requirements and Considerations for Greenhouse Gas Modeling

Dear Mr. Tsai,

Soil Water Air Protection Enterprise (“SWAPE”) is pleased to provide the following draft technical report explaining the significance of worker trips required for construction of land use development projects with respect to the estimation of greenhouse gas (“GHG”) emissions. The report will also discuss the potential for local hire requirements to reduce the length of worker trips, and consequently, reduced or mitigate the potential GHG impacts.

Worker Trips and Greenhouse Gas Calculations

The California Emissions Estimator Model (“CalEEMod”) is a “statewide land use emissions computer model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify potential criteria pollutant and greenhouse gas (GHG) emissions associated with both construction and operations from a variety of land use projects.”¹ CalEEMod quantifies construction-related emissions associated with land use projects resulting from off-road construction equipment; on-road mobile equipment associated with workers, vendors, and hauling; fugitive dust associated with grading, demolition, truck loading, and on-road vehicles traveling along paved and unpaved roads; and architectural coating activities; and paving.²

The number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.³

¹ “California Emissions Estimator Model.” CAPCOA, 2017, available at: <http://www.aqmd.gov/caleemod/home>.

² “California Emissions Estimator Model.” CAPCOA, 2017, available at: <http://www.aqmd.gov/caleemod/home>.

³ “CalEEMod User’s Guide.” CAPCOA, November 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.

Specifically, the number and length of vehicle trips is utilized to estimate the vehicle miles travelled (“VMT”) associated with construction. Then, utilizing vehicle-class specific EMFAC 2014 emission factors, CalEEMod calculates the vehicle exhaust, evaporative, and dust emissions resulting from construction-related VMT, including personal vehicles for worker commuting.⁴

Specifically, in order to calculate VMT, CalEEMod multiplies the average daily trip rate by the average overall trip length (see excerpt below):

$$\text{“VMT}_d = \Sigma(\text{Average Daily Trip Rate}_i * \text{Average Overall Trip Length}_i)_n$$

Where:

n = Number of land uses being modeled.”⁵

Furthermore, to calculate the on-road emissions associated with worker trips, CalEEMod utilizes the following equation (see excerpt below):

$$\text{“Emissions}_{\text{pollutant}} = \text{VMT} * \text{EF}_{\text{running,pollutant}}$$

Where:

$\text{Emissions}_{\text{pollutant}}$ = emissions from vehicle running for each pollutant

VMT = vehicle miles traveled

$\text{EF}_{\text{running,pollutant}}$ = emission factor for running emissions.”⁶

Thus, there is a direct relationship between trip length and VMT, as well as a direct relationship between VMT and vehicle running emissions. In other words, when the trip length is increased, the VMT and vehicle running emissions increase as a result. Thus, vehicle running emissions can be reduced by decreasing the average overall trip length, by way of a local hire requirement or otherwise.

Default Worker Trip Parameters and Potential Local Hire Requirements

As previously discussed, the number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.⁷ In order to understand how local hire requirements and associated worker trip length reductions impact GHG emissions calculations, it is important to consider the CalEEMod default worker trip parameters. CalEEMod provides recommended default values based on site-specific information, such as land use type, meteorological data, total lot acreage, project type and typical equipment associated with project type. If more specific project information is known, the user can change the default values and input project-specific values, but the California Environmental Quality Act (“CEQA”) requires that such changes be justified by substantial evidence.⁸ The default number of construction-related worker trips is calculated by multiplying the

⁵ “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 23.

⁶ “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 15.

⁷ “CalEEMod User’s Guide.” CAPCOA, November 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.

⁸ CalEEMod User Guide, available at: <http://www.caleemod.com/>, p. 1, 9.

number of pieces of equipment for all phases by 1.25, with the exception of worker trips required for the building construction and architectural coating phases.⁹ Furthermore, the worker trip vehicle class is a 50/25/25 percent mix of light duty autos, light duty truck class 1 and light duty truck class 2, respectively.”¹⁰ Finally, the default worker trip length is consistent with the length of the operational home-to-work vehicle trips.¹¹ The operational home-to-work vehicle trip lengths are:

“[B]ased on the *location* and *urbanization* selected on the project characteristic screen. These values were *supplied by the air districts or use a default average for the state*. Each district (or county) also assigns trip lengths for urban and rural settings” (emphasis added).¹²

Thus, the default worker trip length is based on the location and urbanization level selected by the User when modeling emissions. The below table shows the CalEEMod default rural and urban worker trip lengths by air basin (see excerpt below and Attachment A).¹³

Worker Trip Length by Air Basin		
Air Basin	Rural (miles)	Urban (miles)
Great Basin Valleys	16.8	10.8
Lake County	16.8	10.8
Lake Tahoe	16.8	10.8
Mojave Desert	16.8	10.8
Mountain Counties	16.8	10.8
North Central Coast	17.1	12.3
North Coast	16.8	10.8
Northeast Plateau	16.8	10.8
Sacramento Valley	16.8	10.8
Salton Sea	14.6	11
San Diego	16.8	10.8
San Francisco Bay Area	10.8	10.8
San Joaquin Valley	16.8	10.8
South Central Coast	16.8	10.8
South Coast	19.8	14.7
Average	16.47	11.17
Minimum	10.80	10.80
Maximum	19.80	14.70
Range	9.00	3.90

⁹ “CalEEMod User’s Guide.” CAPCOA, November 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.

¹⁰ “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 15.

¹¹ “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 14.

¹² “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 21.

¹³ “Appendix D Default Data Tables.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/05_appendix-d2016-3-2.pdf?sfvrsn=4, p. D-84 – D-86.

As demonstrated above, default rural worker trip lengths for air basins in California vary from 10.8- to 19.8- miles, with an average of 16.47 miles. Furthermore, default urban worker trip lengths vary from 10.8- to 14.7- miles, with an average of 11.17 miles. Thus, while default worker trip lengths vary by location, default urban worker trip lengths tend to be shorter in length. Based on these trends evident in the CalEEMod default worker trip lengths, we can reasonably assume that the efficacy of a local hire requirement is especially dependent upon the urbanization of the project site, as well as the project location.

Practical Application of a Local Hire Requirement and Associated Impact

To provide an example of the potential impact of a local hire provision on construction-related GHG emissions, we estimated the significance of a local hire provision for the Village South Specific Plan (“Project”) located in the City of Claremont (“City”). The Project proposed to construct 1,000 residential units, 100,000-SF of retail space, 45,000-SF of office space, as well as a 50-room hotel, on the 24-acre site. The Project location is classified as Urban and lies within the Los Angeles-South Coast County. As a result, the Project has a default worker trip length of 14.7 miles.¹⁴ In an effort to evaluate the potential for a local hire provision to reduce the Project’s construction-related GHG emissions, we prepared an updated model, reducing all worker trip lengths to 10 miles (see Attachment B). Our analysis estimates that if a local hire provision with a 10-mile radius were to be implemented, the GHG emissions associated with Project construction would decrease by approximately 17% (see table below and Attachment C).

Local Hire Provision Net Change	
Without Local Hire Provision	
Total Construction GHG Emissions (MT CO ₂ e)	3,623
Amortized Construction GHG Emissions (MT CO ₂ e/year)	120.77
With Local Hire Provision	
Total Construction GHG Emissions (MT CO ₂ e)	3,024
Amortized Construction GHG Emissions (MT CO ₂ e/year)	100.80
% Decrease in Construction-related GHG Emissions	17%

As demonstrated above, by implementing a local hire provision requiring 10 mile worker trip lengths, the Project could reduce potential GHG emissions associated with construction worker trips. More broadly, any local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

This serves as an example of the potential impacts of local hire requirements on estimated project-level GHG emissions, though it does not indicate that local hire requirements would result in reduced construction-related GHG emission for all projects. As previously described, the significance of a local hire requirement depends on the worker trip length enforced and the default worker trip length for the project’s urbanization level and location.

¹⁴ “Appendix D Default Data Tables.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/05_appendix-d2016-3-2.pdf?sfvrsn=4, p. D-85.

Los Angeles-South Coast County, Summer

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	45.00	1000sqft	1.03	45,000.00	0
High Turnover (Sit Down Restaurant)	36.00	1000sqft	0.83	36,000.00	0
Hotel	50.00	Room	1.67	72,600.00	0
Quality Restaurant	8.00	1000sqft	0.18	8,000.00	0
Apartments Low Rise	25.00	Dwelling Unit	1.56	25,000.00	72
Apartments Mid Rise	975.00	Dwelling Unit	25.66	975,000.00	2789
Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MW hr)	702.44	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MW hr)	702.44	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MW hr)	702.44	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Annual

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	45.00	1000sqft	1.03	45,000.00	0
High Turnover (Sit Down Restaurant)	36.00	1000sqft	0.83	36,000.00	0
Hotel	50.00	Room	1.67	72,600.00	0
Quality Restaurant	8.00	1000sqft	0.18	8,000.00	0
Apartments Low Rise	25.00	Dwelling Unit	1.56	25,000.00	72
Apartments Mid Rise	975.00	Dwelling Unit	25.66	975,000.00	2789
Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MW hr)	702.44	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MW hr)	702.44	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

EXHIBIT B

Paul Rosenfeld, Ph.D.

Principal Environmental Chemist

Chemical Fate and Transport & Air Dispersion Modeling

Risk Assessment & Remediation Specialist

Education

Ph.D. Soil Chemistry, University of Washington, 1999. Dissertation on volatile organic compound filtration.

M.S. Environmental Science, U.C. Berkeley, 1995. Thesis on organic waste economics.

B.A. Environmental Studies, U.C. Santa Barbara, 1991. Thesis on wastewater treatment.

Professional Experience

Dr. Rosenfeld has over 25 years' experience conducting environmental investigations and risk assessments for evaluating impacts to human health, property, and ecological receptors. His expertise focuses on the fate and transport of environmental contaminants, human health risk, exposure assessment, and ecological restoration. Dr. Rosenfeld has evaluated and modeled emissions from unconventional oil drilling operations, oil spills, landfills, boilers and incinerators, process stacks, storage tanks, confined animal feeding operations, and many other industrial and agricultural sources. His project experience ranges from monitoring and modeling of pollution sources to evaluating impacts of pollution on workers at industrial facilities and residents in surrounding communities.

Dr. Rosenfeld has investigated and designed remediation programs and risk assessments for contaminated sites containing lead, heavy metals, mold, bacteria, particulate matter, petroleum hydrocarbons, chlorinated solvents, pesticides, radioactive waste, dioxins and furans, semi- and volatile organic compounds, PCBs, PAHs, perchlorate, asbestos, per- and poly-fluoroalkyl substances (PFOA/PFOS), unusual polymers, fuel oxygenates (MTBE), among other pollutants. Dr. Rosenfeld also has experience evaluating greenhouse gas emissions from various projects and is an expert on the assessment of odors from industrial and agricultural sites, as well as the evaluation of odor nuisance impacts and technologies for abatement of odorous emissions. As a principal scientist at SWAPE, Dr. Rosenfeld directs air dispersion modeling and exposure assessments. He has served as an expert witness and testified about pollution sources causing nuisance and/or personal injury at dozens of sites and has testified as an expert witness on more than ten cases involving exposure to air contaminants from industrial sources.

Professional History:

Soil Water Air Protection Enterprise (SWAPE); 2003 to present; Principal and Founding Partner
UCLA School of Public Health; 2007 to 2011; Lecturer (Assistant Researcher)
UCLA School of Public Health; 2003 to 2006; Adjunct Professor
UCLA Environmental Science and Engineering Program; 2002-2004; Doctoral Intern Coordinator
UCLA Institute of the Environment, 2001-2002; Research Associate
Komex H₂O Science, 2001 to 2003; Senior Remediation Scientist
National Groundwater Association, 2002-2004; Lecturer
San Diego State University, 1999-2001; Adjunct Professor
Anteon Corp., San Diego, 2000-2001; Remediation Project Manager
Ogden (now Amec), San Diego, 2000-2000; Remediation Project Manager
Bechtel, San Diego, California, 1999 – 2000; Risk Assessor
King County, Seattle, 1996 – 1999; Scientist
James River Corp., Washington, 1995-96; Scientist
Big Creek Lumber, Davenport, California, 1995; Scientist
Plumas Corp., California and USFS, Tahoe 1993-1995; Scientist
Peace Corps and World Wildlife Fund, St. Kitts, West Indies, 1991-1993; Scientist

Teaching Experience:

UCLA Department of Environmental Health (Summer 2003 through 20010) Taught Environmental Health Science 100 to students, including undergrad, medical doctors, public health professionals and nurses. Course focused on the health effects of environmental contaminants.

National Ground Water Association, Successful Remediation Technologies. Custom Course in Sante Fe, New Mexico. May 21, 2002. Focused on fate and transport of fuel contaminants associated with underground storage tanks.

National Ground Water Association; Successful Remediation Technologies Course in Chicago Illinois. April 1, 2002. Focused on fate and transport of contaminants associated with Superfund and RCRA sites.

California Integrated Waste Management Board, April and May, 2001. Alternative Landfill Caps Seminar in San Diego, Ventura, and San Francisco. Focused on both prescriptive and innovative landfill cover design.

UCLA Department of Environmental Engineering, February 5, 2002. Seminar on Successful Remediation Technologies focusing on Groundwater Remediation.

University Of Washington, Soil Science Program, Teaching Assistant for several courses including: Soil Chemistry, Organic Soil Amendments, and Soil Stability.

U.C. Berkeley, Environmental Science Program Teaching Assistant for Environmental Science 10.

Academic Grants Awarded:

California Integrated Waste Management Board. \$41,000 grant awarded to UCLA Institute of the Environment. Goal: To investigate effect of high carbon wood ash on volatile organic emissions from compost. 2001.

Synagro Technologies, Corona California: \$10,000 grant awarded to San Diego State University. Goal: investigate effect of biosolids for restoration and remediation of degraded coastal sage soils. 2000.

King County, Department of Research and Technology, Washington State. \$100,000 grant awarded to University of Washington: Goal: To investigate odor emissions from biosolids application and the effect of polymers and ash on VOC emissions. 1998.

Northwest Biosolids Management Association, Washington State. \$20,000 grant awarded to investigate effect of polymers and ash on VOC emissions from biosolids. 1997.

James River Corporation, Oregon: \$10,000 grant was awarded to investigate the success of genetically engineered Poplar trees with resistance to round-up. 1996.

United State Forest Service, Tahoe National Forest: \$15,000 grant was awarded to investigating fire ecology of the Tahoe National Forest. 1995.

Kellogg Foundation, Washington D.C. \$500 grant was awarded to construct a large anaerobic digester on St. Kitts in West Indies. 1993

Deposition and/or Trial Testimony:

- In the United States District Court For The District of New Jersey
Duarte et al, *Plaintiffs*, vs. United States Metals Refining Company et. al. *Defendant*.
Case No.: 2:17-cv-01624-ES-SCM
Rosenfeld Deposition. 6-7-2019
- In the United States District Court of Southern District of Texas Galveston Division
M/T Carla Maersk, *Plaintiffs*, vs. Conti 168., Schiffahrts-GMBH & Co. Bulker KG MS “Conti Perdido”
Defendant.
Case No.: 3:15-CV-00106 consolidated with 3:15-CV-00237
Rosenfeld Deposition. 5-9-2019
- In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica
Carole-Taddeo-Bates et al., vs. Ifran Khan et al., Defendants
Case No.: No. BC615636
Rosenfeld Deposition, 1-26-2019
- In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica
The San Gabriel Valley Council of Governments et al. vs El Adobe Apts. Inc. et al., Defendants
Case No.: No. BC646857
Rosenfeld Deposition, 10-6-2018; Trial 3-7-19
- In United States District Court For The District of Colorado
Bells et al. Plaintiff vs. The 3M Company et al., Defendants
Case: No 1:16-cv-02531-RBJ
Rosenfeld Deposition, 3-15-2018 and 4-3-2018
- In The District Court Of Regan County, Texas, 112th Judicial District
Phillip Bales et al., Plaintiff vs. Dow Agrosiences, LLC, et al., Defendants
Cause No 1923
Rosenfeld Deposition, 11-17-2017
- In The Superior Court of the State of California In And For The County Of Contra Costa
Simons et al., Plaintiffs vs. Chevron Corporation, et al., Defendants
Cause No C12-01481
Rosenfeld Deposition, 11-20-2017
- In The Circuit Court Of The Twentieth Judicial Circuit, St Clair County, Illinois
Martha Custer et al., Plaintiff vs. Cerro Flow Products, Inc., Defendants
Case No.: No. 0i9-L-2295
Rosenfeld Deposition, 8-23-2017
- In The Superior Court of the State of California, For The County of Los Angeles
Warrn Gilbert and Penny Gilber, Plaintiff vs. BMW of North America LLC
Case No.: LC102019 (c/w BC582154)
Rosenfeld Deposition, 8-16-2017, Trail 8-28-2018
- In the Northern District Court of Mississippi, Greenville Division
Brenda J. Cooper, et al., *Plaintiffs*, vs. Meritor Inc., et al., *Defendants*
Case Number: 4:16-cv-52-DMB-JVM
Rosenfeld Deposition: July 2017

In The Superior Court of the State of Washington, County of Snohomish
Michael Davis and Julie Davis et al., Plaintiff vs. Cedar Grove Composting Inc., Defendants
Case No.: No. 13-2-03987-5
Rosenfeld Deposition, February 2017
Trial, March 2017

In The Superior Court of the State of California, County of Alameda
Charles Spain., Plaintiff vs. Thermo Fisher Scientific, et al., Defendants
Case No.: RG14711115
Rosenfeld Deposition, September 2015

In The Iowa District Court In And For Poweshiek County
Russell D. Winburn, et al., Plaintiffs vs. Doug Hoksbergen, et al., Defendants
Case No.: LALA002187
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County
Jerry Dovico, et al., Plaintiffs vs. Valley View Sine LLC, et al., Defendants
Law No.: LALA105144 - Division A
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County
Doug Pauls, et al., et al., Plaintiffs vs. Richard Warren, et al., Defendants
Law No.: LALA105144 - Division A
Rosenfeld Deposition, August 2015

In The Circuit Court of Ohio County, West Virginia
Robert Andrews, et al. v. Antero, et al.
Civil Action NO. 14-C-30000
Rosenfeld Deposition, June 2015

In The Third Judicial District County of Dona Ana, New Mexico
Betty Gonzalez, et al. Plaintiffs vs. Del Oro Dairy, Del Oro Real Estate LLC, Jerry Settles and Deward
DeRuyter, Defendants
Rosenfeld Deposition: July 2015

In The Iowa District Court For Muscatine County
Laurie Freeman et. al. Plaintiffs vs. Grain Processing Corporation, Defendant
Case No 4980
Rosenfeld Deposition: May 2015

In the Circuit Court of the 17th Judicial Circuit, in and For Broward County, Florida
Walter Hinton, et. al. Plaintiff, vs. City of Fort Lauderdale, Florida, a Municipality, Defendant.
Case Number CACE07030358 (26)
Rosenfeld Deposition: December 2014

In the United States District Court Western District of Oklahoma
Tommy McCarty, et al., Plaintiffs, v. Oklahoma City Landfill, LLC d/b/a Southeast Oklahoma City
Landfill, et al. Defendants.
Case No. 5:12-cv-01152-C
Rosenfeld Deposition: July 2014

In the County Court of Dallas County Texas
Lisa Parr et al, *Plaintiff*, vs. Aruba et al, *Defendant*.
Case Number cc-11-01650-E
Rosenfeld Deposition: March and September 2013
Rosenfeld Trial: April 2014

In the Court of Common Pleas of Tuscarawas County Ohio
John Michael Abicht, et al., *Plaintiffs*, vs. Republic Services, Inc., et al., *Defendants*
Case Number: 2008 CT 10 0741 (Cons. w/ 2009 CV 10 0987)
Rosenfeld Deposition: October 2012

In the United States District Court of Southern District of Texas Galveston Division
Kyle Cannon, Eugene Donovan, Genaro Ramirez, Carol Sassler, and Harvey Walton, each Individually and on behalf of those similarly situated, *Plaintiffs*, vs. BP Products North America, Inc., *Defendant*.
Case 3:10-cv-00622
Rosenfeld Deposition: February 2012
Rosenfeld Trial: April 2013

In the Circuit Court of Baltimore County Maryland
Philip E. Cvach, II et al., *Plaintiffs* vs. Two Farms, Inc. d/b/a Royal Farms, Defendants
Case Number: 03-C-12-012487 OT
Rosenfeld Deposition: September 2013

Matthew F. Hagemann, P.G., C.Hg., QSD, QSP

**Geologic and Hydrogeologic Characterization
Industrial Stormwater Compliance
Investigation and Remediation Strategies
Litigation Support and Testifying Expert
CEQA Review**

Education:

M.S. Degree, Geology, California State University Los Angeles, Los Angeles, CA, 1984.

B.A. Degree, Geology, Humboldt State University, Arcata, CA, 1982.

Professional Certifications:

California Professional Geologist

California Certified Hydrogeologist

Qualified SWPPP Developer and Practitioner

Professional Experience:

Matt has 25 years of experience in environmental policy, assessment and remediation. He spent nine years with the U.S. EPA in the RCRA and Superfund programs and served as EPA's Senior Science Policy Advisor in the Western Regional Office where he identified emerging threats to groundwater from perchlorate and MTBE. While with EPA, Matt also served as a Senior Hydrogeologist in the oversight of the assessment of seven major military facilities undergoing base closure. He led numerous enforcement actions under provisions of the Resource Conservation and Recovery Act (RCRA) while also working with permit holders to improve hydrogeologic characterization and water quality monitoring.

Matt has worked closely with U.S. EPA legal counsel and the technical staff of several states in the application and enforcement of RCRA, Safe Drinking Water Act and Clean Water Act regulations. Matt has trained the technical staff in the States of California, Hawaii, Nevada, Arizona and the Territory of Guam in the conduct of investigations, groundwater fundamentals, and sampling techniques.

Positions Matt has held include:

- Founding Partner, Soil/Water/Air Protection Enterprise (SWAPE) (2003 – present);
- Geology Instructor, Golden West College, 2010 – 2014;
- Senior Environmental Analyst, Komex H2O Science, Inc. (2000 -- 2003);

- Executive Director, Orange Coast Watch (2001 – 2004);
- Senior Science Policy Advisor and Hydrogeologist, U.S. Environmental Protection Agency (1989–1998);
- Hydrogeologist, National Park Service, Water Resources Division (1998 – 2000);
- Adjunct Faculty Member, San Francisco State University, Department of Geosciences (1993 – 1998);
- Instructor, College of Marin, Department of Science (1990 – 1995);
- Geologist, U.S. Forest Service (1986 – 1998); and
- Geologist, Dames & Moore (1984 – 1986).

Senior Regulatory and Litigation Support Analyst:

With SWAPE, Matt’s responsibilities have included:

- Lead analyst and testifying expert in the review of over 100 environmental impact reports since 2003 under CEQA that identify significant issues with regard to hazardous waste, water resources, water quality, air quality, Valley Fever, greenhouse gas emissions, and geologic hazards. Make recommendations for additional mitigation measures to lead agencies at the local and county level to include additional characterization of health risks and implementation of protective measures to reduce worker exposure to hazards from toxins and Valley Fever.
- Stormwater analysis, sampling and best management practice evaluation at industrial facilities.
- Manager of a project to provide technical assistance to a community adjacent to a former Naval shipyard under a grant from the U.S. EPA.
- Technical assistance and litigation support for vapor intrusion concerns.
- Lead analyst and testifying expert in the review of environmental issues in license applications for large solar power plants before the California Energy Commission.
- Manager of a project to evaluate numerous formerly used military sites in the western U.S.
- Manager of a comprehensive evaluation of potential sources of perchlorate contamination in Southern California drinking water wells.
- Manager and designated expert for litigation support under provisions of Proposition 65 in the review of releases of gasoline to sources drinking water at major refineries and hundreds of gas stations throughout California.
- Expert witness on two cases involving MTBE litigation.
- Expert witness and litigation support on the impact of air toxins and hazards at a school.
- Expert witness in litigation at a former plywood plant.

With Komex H2O Science Inc., Matt’s duties included the following:

- Senior author of a report on the extent of perchlorate contamination that was used in testimony by the former U.S. EPA Administrator and General Counsel.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of MTBE use, research, and regulation.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of perchlorate use, research, and regulation.
- Senior researcher in a study that estimates nationwide costs for MTBE remediation and drinking water treatment, results of which were published in newspapers nationwide and in testimony against provisions of an energy bill that would limit liability for oil companies.
- Research to support litigation to restore drinking water supplies that have been contaminated by MTBE in California and New York.

- Expert witness testimony in a case of oil production-related contamination in Mississippi.
- Lead author for a multi-volume remedial investigation report for an operating school in Los Angeles that met strict regulatory requirements and rigorous deadlines.

- Development of strategic approaches for cleanup of contaminated sites in consultation with clients and regulators.

Executive Director:

As Executive Director with Orange Coast Watch, Matt led efforts to restore water quality at Orange County beaches from multiple sources of contamination including urban runoff and the discharge of wastewater. In reporting to a Board of Directors that included representatives from leading Orange County universities and businesses, Matt prepared issue papers in the areas of treatment and disinfection of wastewater and control of the discharge of grease to sewer systems. Matt actively participated in the development of countywide water quality permits for the control of urban runoff and permits for the discharge of wastewater. Matt worked with other nonprofits to protect and restore water quality, including Surfrider, Natural Resources Defense Council and Orange County CoastKeeper as well as with business institutions including the Orange County Business Council.

Hydrogeology:

As a Senior Hydrogeologist with the U.S. Environmental Protection Agency, Matt led investigations to characterize and cleanup closing military bases, including Mare Island Naval Shipyard, Hunters Point Naval Shipyard, Treasure Island Naval Station, Alameda Naval Station, Moffett Field, Mather Army Airfield, and Sacramento Army Depot. Specific activities were as follows:

- Led efforts to model groundwater flow and contaminant transport, ensured adequacy of monitoring networks, and assessed cleanup alternatives for contaminated sediment, soil, and groundwater.
- Initiated a regional program for evaluation of groundwater sampling practices and laboratory analysis at military bases.
- Identified emerging issues, wrote technical guidance, and assisted in policy and regulation development through work on four national U.S. EPA workgroups, including the Superfund Groundwater Technical Forum and the Federal Facilities Forum.

At the request of the State of Hawaii, Matt developed a methodology to determine the vulnerability of groundwater to contamination on the islands of Maui and Oahu. He used analytical models and a GIS to show zones of vulnerability, and the results were adopted and published by the State of Hawaii and County of Maui.

As a hydrogeologist with the EPA Groundwater Protection Section, Matt worked with provisions of the Safe Drinking Water Act and NEPA to prevent drinking water contamination. Specific activities included the following:

- Received an EPA Bronze Medal for his contribution to the development of national guidance for the protection of drinking water.
- Managed the Sole Source Aquifer Program and protected the drinking water of two communities through designation under the Safe Drinking Water Act. He prepared geologic reports, conducted public hearings, and responded to public comments from residents who were very concerned about the impact of designation.

- Reviewed a number of Environmental Impact Statements for planned major developments, including large hazardous and solid waste disposal facilities, mine reclamation, and water transfer.

Matt served as a hydrogeologist with the RCRA Hazardous Waste program. Duties were as follows:

- Supervised the hydrogeologic investigation of hazardous waste sites to determine compliance with Subtitle C requirements.
- Reviewed and wrote "part B" permits for the disposal of hazardous waste.
- Conducted RCRA Corrective Action investigations of waste sites and led inspections that formed the basis for significant enforcement actions that were developed in close coordination with U.S. EPA legal counsel.
- Wrote contract specifications and supervised contractor's investigations of waste sites.

With the National Park Service, Matt directed service-wide investigations of contaminant sources to prevent degradation of water quality, including the following tasks:

- Applied pertinent laws and regulations including CERCLA, RCRA, NEPA, NRDA, and the Clean Water Act to control military, mining, and landfill contaminants.
- Conducted watershed-scale investigations of contaminants at parks, including Yellowstone and Olympic National Park.
- Identified high-levels of perchlorate in soil adjacent to a national park in New Mexico and advised park superintendent on appropriate response actions under CERCLA.
- Served as a Park Service representative on the Interagency Perchlorate Steering Committee, a national workgroup.
- Developed a program to conduct environmental compliance audits of all National Parks while serving on a national workgroup.
- Co-authored two papers on the potential for water contamination from the operation of personal watercraft and snowmobiles, these papers serving as the basis for the development of nation-wide policy on the use of these vehicles in National Parks.
- Contributed to the Federal Multi-Agency Source Water Agreement under the Clean Water Action Plan.

Policy:

Served senior management as the Senior Science Policy Advisor with the U.S. Environmental Protection Agency, Region 9. Activities included the following:

- Advised the Regional Administrator and senior management on emerging issues such as the potential for the gasoline additive MTBE and ammonium perchlorate to contaminate drinking water supplies.
- Shaped EPA's national response to these threats by serving on workgroups and by contributing to guidance, including the Office of Research and Development publication, *Oxygenates in Water: Critical Information and Research Needs*.
- Improved the technical training of EPA's scientific and engineering staff.
- Earned an EPA Bronze Medal for representing the region's 300 scientists and engineers in negotiations with the Administrator and senior management to better integrate scientific principles into the policy-making process.
- Established national protocol for the peer review of scientific documents.

Geology:

With the U.S. Forest Service, Matt led investigations to determine hillslope stability of areas proposed for timber harvest in the central Oregon Coast Range. Specific activities were as follows:

- Mapped geology in the field, and used aerial photographic interpretation and mathematical models to determine slope stability.
- Coordinated his research with community members who were concerned with natural resource protection.
- Characterized the geology of an aquifer that serves as the sole source of drinking water for the city of Medford, Oregon.

As a consultant with Dames and Moore, Matt led geologic investigations of two contaminated sites (later listed on the Superfund NPL) in the Portland, Oregon, area and a large hazardous waste site in eastern Oregon. Duties included the following:

- Supervised year-long effort for soil and groundwater sampling.
- Conducted aquifer tests.
- Investigated active faults beneath sites proposed for hazardous waste disposal.

Teaching:

From 1990 to 1998, Matt taught at least one course per semester at the community college and university levels:

- At San Francisco State University, held an adjunct faculty position and taught courses in environmental geology, oceanography (lab and lecture), hydrogeology, and groundwater contamination.
- Served as a committee member for graduate and undergraduate students.
- Taught courses in environmental geology and oceanography at the College of Marin.

Matt taught physical geology (lecture and lab and introductory geology at Golden West College in Huntington Beach, California from 2010 to 2014.

Pasadena, CA 91101

Subject: 550 Piercy Road Industrial Development

Dear Ms. Papayanis,

I have reviewed vehicle miles traveled ("VMT") and greenhouse gas ("GHG") impacts of the proposed project documented in Initial Study/Mitigated Negative Declaration for 550 Piercy Road Industrial Development dated June 2023 ("MND"). I make the following findings:

- 1) The MND greatly underestimates the project's VMT impacts. The analysis includes only a portion of commuting VMT and excludes non-commuting VMT. The portion of commuting that is included in the MND analysis is also underestimated as demonstrated with Census LODS data that indicate an average current of 38.3 commute VMT per employee per day to the project area. It could be argued that even though neither the estimate of the City average VMT per worker, nor the estimate of project VMT per worker are correct, the comparison is "apples-to-apples" and therefore valid. This assertion is impossible to test without more accurate VMT estimates because the average and project estimates may be biased by different magnitudes. Better VMT estimates are needed.
- 2) The MND overestimates baseline non-auto mode share in the project area and overestimates the potential to increase it with minimal mitigation. The existing non-auto auto commute mode share in the project area is only 1.2 percent (Census CTPP data), but the MND assumes it to be 5 percent. Then the MND asserts that the addition of a short bike lane and pedestrian improvements at a single intersection would increase non-auto mode share at this location by a

factor of five relative to today. This is at least 10 times what the true reduction would be in this location from the proposed mitigation.

- 3) The VMT analysis and mitigation fail to address the true VMT problem – housing. The fundamental problem is that most workers cannot afford to live within walking or biking distance of the project. The long average commutes documented to the project site are a common problem throughout the City and the larger Bay Area. In the Census LODS data, the average commute distance for the lowest income workers in the project area is 20 percent higher than the average for all workers. Without a better jobs/housing balance, adding jobs to this area will inevitably add significant VMT, and a methodology is needed that accurately estimates the true VMT impacts.
- 4) VMT impacts are integral to the project's GHG impacts. The MND uses CalEEMod default average trip lengths of 9.5 miles for home-based work trips, 7.3 for other passenger trips. The 9.5-mile length for work trips is clearly much too low relative to Census LODS data. It should be increased and GHG emissions recalculated.

The MND Greatly Underestimates VMT Impacts

The MND states:

The San Jose VMT Evaluation Tool is used to estimate the project VMT based on the project location (APN), type of development, project description, and proposed trip reduction measures. The threshold of significance for industrial employment uses (see Table 1 in Ch. 1) was used for the VMT analysis. The VMT threshold for industrial employment uses is the existing regional average VMT level of 14.37 miles per employee...

Per the City's VMT Evaluation Tool, the existing Area VMT for employment uses is 14.82 VMT per worker, which is above the existing regional average threshold of 14.37 VMT per worker. The project VMT estimated by the Evaluation Tool is 14.69 VMT per worker, which also exceeds the industrial threshold of 14.37 VMT per worker. (MND, p. 166 and 168 and Appendix H, p 18)

Most VMT generated by primary employment sites with few visiting customers, including the proposed project, is commute traffic. For industrial employment sites, truck traffic VMT is the second most important component. There also is miscellaneous VMT from service vehicles, deliveries, and trips made by employees during the workday.

To fulfill the purpose of SB 743, all, or at least most, of this VMT should be counted. The VMT measures calculated in the San Jose VMT Evaluation Tool capture only a small part of total VMT.

Figure 1 reproduces an illustration of how VMT per worker is calculated in the Tool. In the example, only half of the commute traffic is counted because the worker stopped for coffee on the way to work. Even if the home-to-coffee segment (#1 in the graphic) is only 100 feet and the coffee-to-work segment (#2) is 50 miles, neither segment is attributed to the project. In this example, it would be much more accurate and useful to also attribute segments 1 and 2 to the project because the coffee stop is likely just a pass-by stop, with no additional VMT, and therefore all the #1 and #2 VMT is attributable to the project as commuting travel.

This methodology is unintuitive to anyone but a travel demand modeler. It results in estimates of 14-15 VMT per worker that grossly underestimate the actual average VMT driven by commuting employees. It cannot be translated into an average commute distance because it counts one-way commutes for some employees and two-way commutes for others. For some employees, it may count no commute VMT at all.

All non-commuting VMT caused by the project is excluded from the metric.

Figure 1: VMT per Employee as Calculated in the San Jose VMT Evaluation Tool¹

VMT per Employee (Office or Industrial Projects)

VMT per employee measures an office or industrial project’s impact on VMT using a trip-based approach. It counts VMT from only linked trips made between residence and the project. For example, the travel characteristics of a typical commuter may include:

1. Home to Coffee Shop;
2. Coffee Shop to Office Project;
3. Office Project to Sandwich Shop;
4. Sandwich Shop to Office Project;
5. Office Project to Home;
6. Home to Store;
7. Store to Home.

A trip-based VMT assessment of an office or industrial project accounts for VMT associated with only home-based-work trips, or segment 5 (highlighted in blue). Home-based-work trips are defined as directly-linked home-to-work or work-to-home trips. Note that segments 1 and 2 are not captured in the VMT calculation because they are multi-linked home-to-work trips. In other words, if an employee makes a directly-linked home-to-work trip in the morning (not represented in the graphic) and another directly-linked work-to-home trip in the evening, the VMT associated with both directly-linked home-based-work trips would be captured. VMT per employee is calculated by dividing the total home-based-work VMT by the number of employees.

The metric could be improved by counting all VMT associated with the primary trip tour – in the example above segments #1, #2 and #5. However, this would not adequately measure commute VMT because there is no evidence that the Tool can accurately estimate average commute distances.

The San Jose VMT Evaluation Tools is based on the City’s travel demand model.² The City’s travel demand model is based on the Santa Clara County regional travel demand model.³ The Santa Clara County data is based on the regional model maintained by the Metropolitan Transportation (“MTC”) model.

I have been a regional travel demand modeler for 35 years, and regional models have never been accurate predictors of average commute distances for small areas. I was unable to find documentation online for either the City’s model or the County’s model – not even information about the underlying

¹ City of San Jose Transportation Analysis Handbook, April 2023.

² Fehr and Peers, San Jose VMT Evaluation Tool: User Guide, p. 2, February 16, 2018.

<https://www.sanjoseca.gov/home/showpublisheddocument/28463/636691896049230000>

³ <https://www.sanjoseca.gov/your-government/departments-offices/environmental-services/climate-smart-san-jos/climate-smart-data-dashboard/mobility-vehicle-miles-traveled>

MTC model version. However, in other jurisdictions in the region, the underlying MTC model is still the 2013 version of Travel Model One release that was validated against 2010 data. That model is no longer the current MTC model which has since progressed from Travel Model One to Travel Model 1.5 with a 2015 validation year. Travel Model Two is under development.

The MTC Travel Model One documentation provides no evidence that the model can accurately estimate commute patterns. Instead, it only documents that the model isn't particularly good even at estimating the proportion of a county's workers commuting to jobs in the same county (reproduced as Figure 2).

Figure 2: MTC Travel Model One Commute Trip Validation⁴

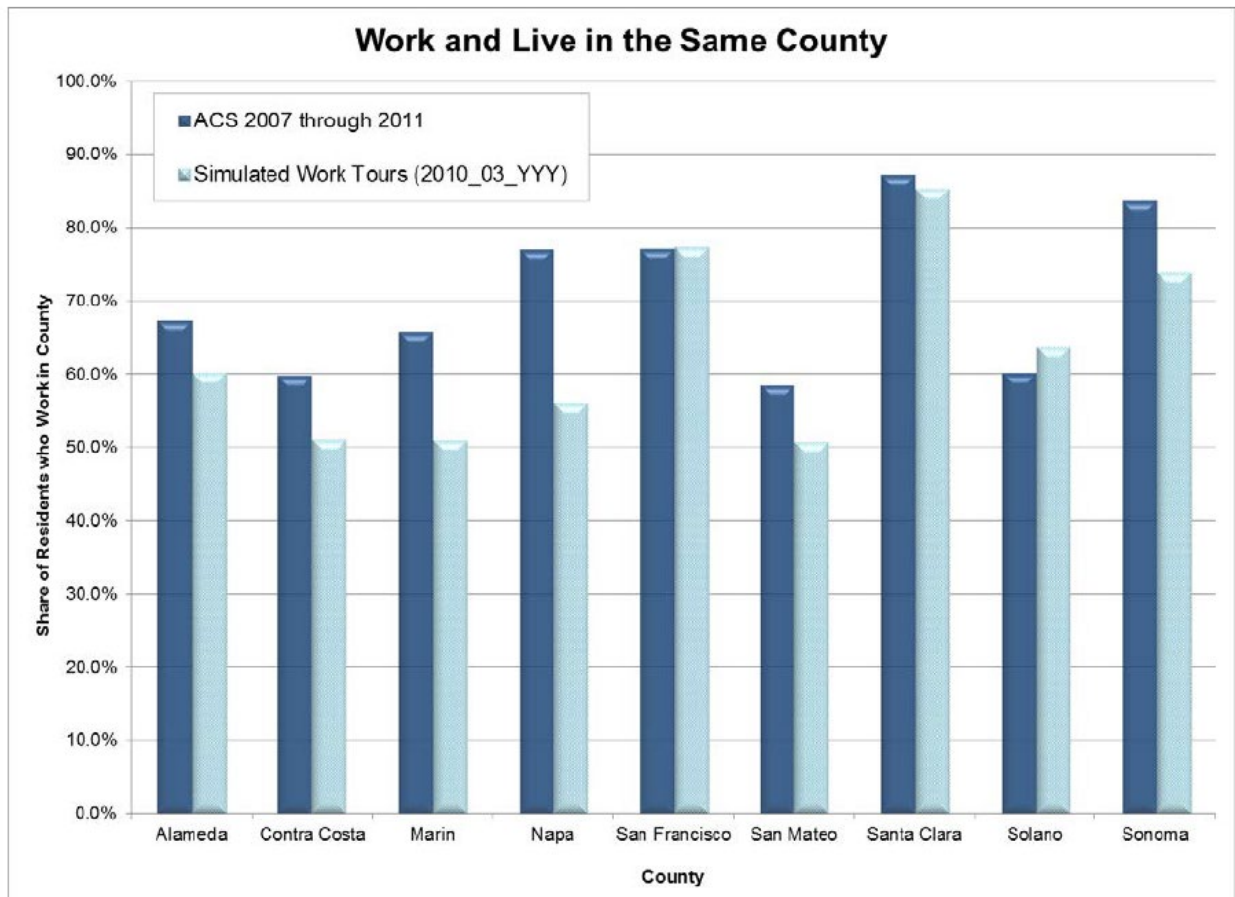

Figure 4: Share of Residents who make Work Tours in the Same County

There is no discussion in the documentation concerning any Model One validation at a smaller than county geography.

I was unable to find any validation of model commutes in Model 1.5. A 2021 document⁵ indicates that "Travel Model 1.5 documentation, including calibration and validation reports, is

⁴ Metropolitan Transportation Commission. Year 2010 Validation of Travel Model One p. 9, October 2, 2013.

⁵ Vautin, MTC/ABAG. Memorandum Technical Methodology to Estimate Greenhouse Gas Emissions for Play Bay Area 2050 (2021 -2050 San Francisco Bay Area RTP/SCS – Spring 2021 Revisions).

available online” at.”

<https://github.com/BayAreaMetro/modelingwebsite/wiki/TravelModel1.5>” but these reports are not available at this website that was last modified on July 30th, 2020. The changes listed on this webpage between Model One and Model 1.5 are focused on ride-hailing and autonomous vehicles and would have little, if any, effect on the model’s estimates of commuting patterns.

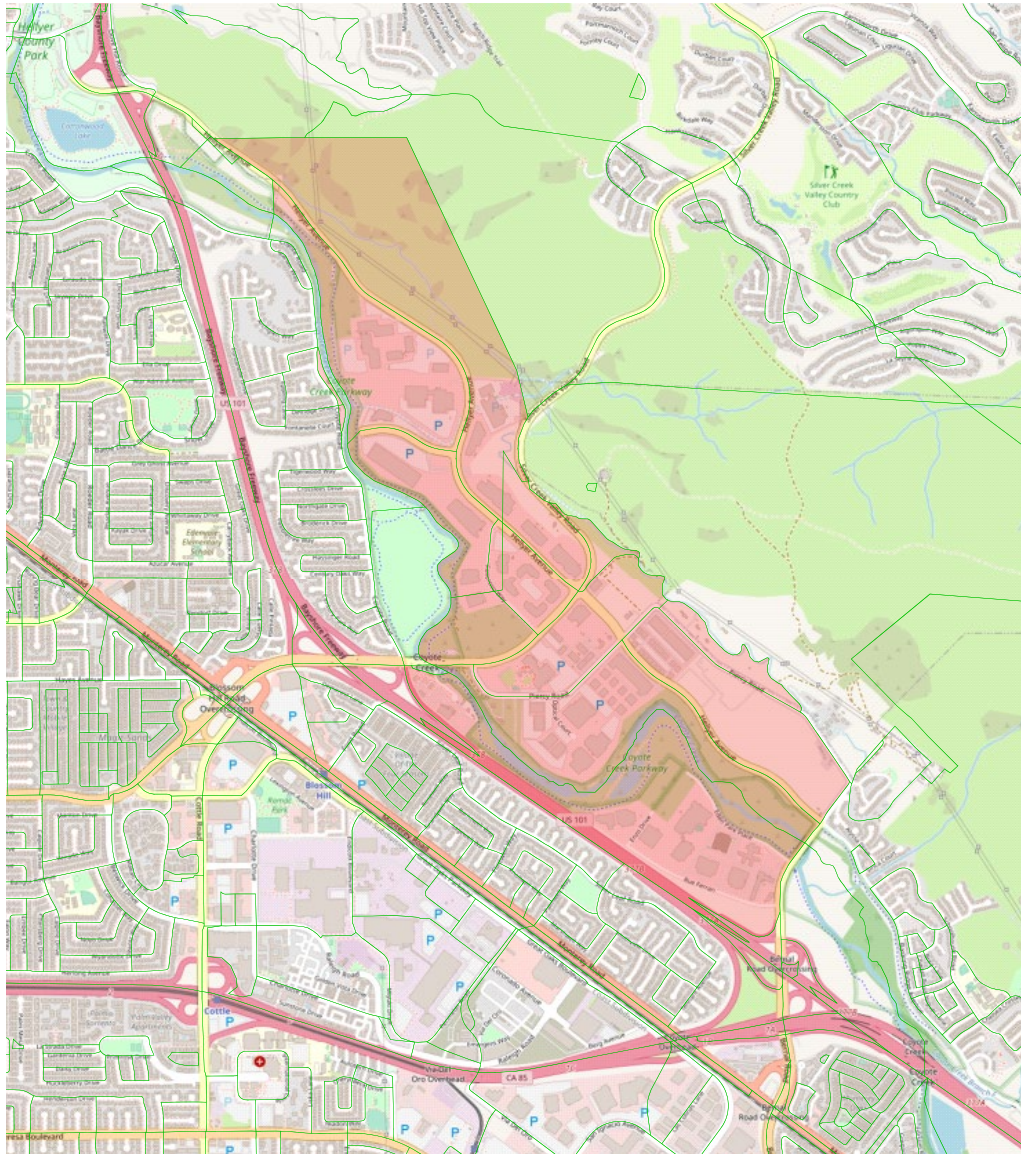

The series of travel demand models underlying the City’s VMT Tool were not intended to accurately estimate commute VMT when they were developed, and there is no evidence that they can do so. A better method is using data.

The U.S. Census Bureau publishes Longitudinal Employer-Household Dynamics (“LEHD”) Origin-Destination Employment Statistics (“LODES”) data that provide detailed geographic data about workers. The LODES data include three parts:

- number of workers at the home location,
- number of jobs at the workplace location, and
- flows of workers from home location to workplace location.

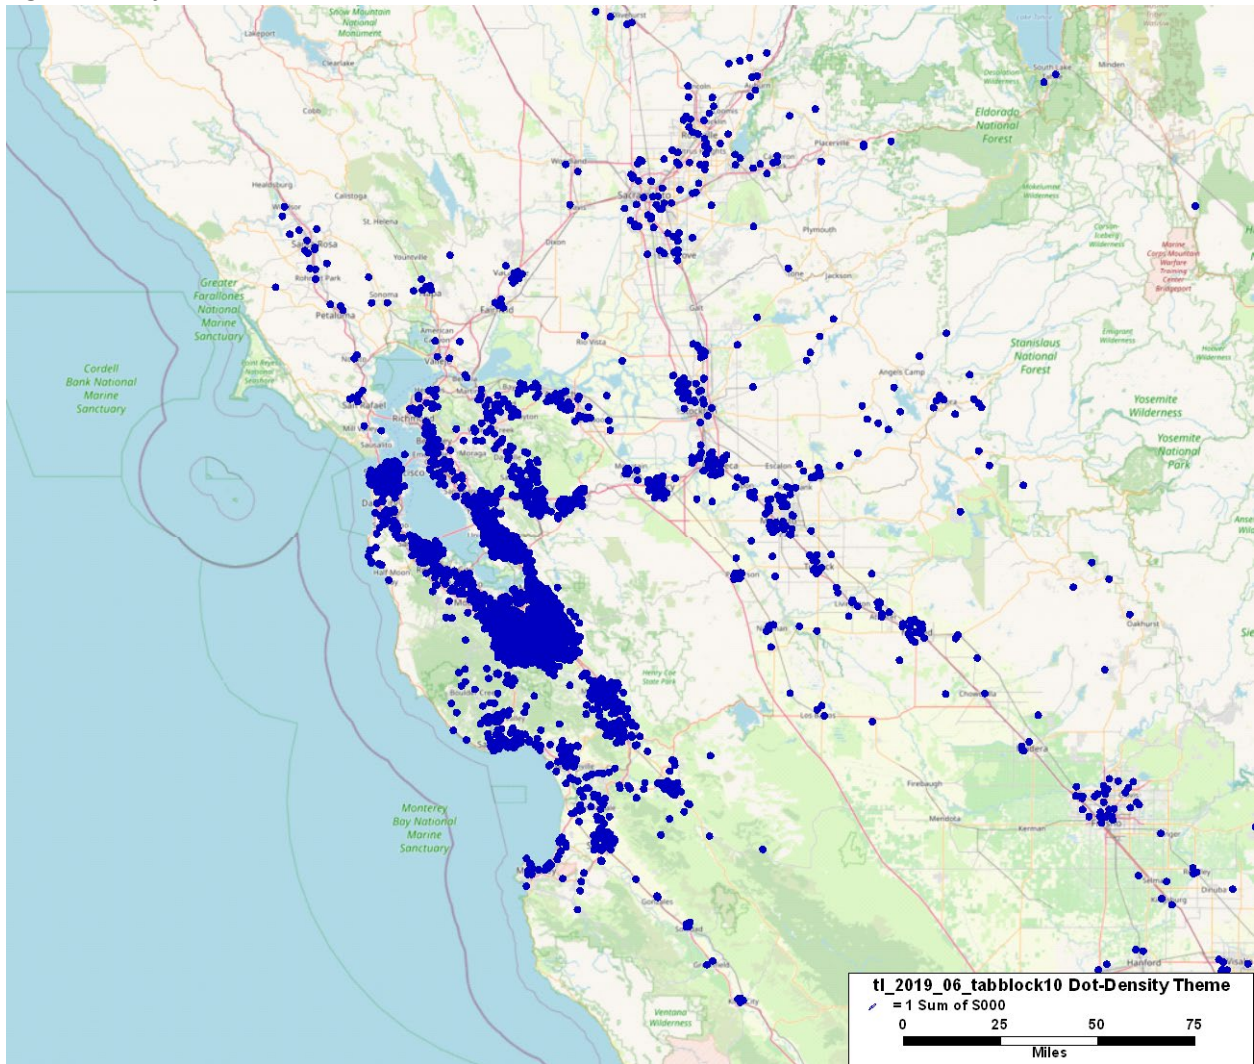

Focusing on workers commuting to the project area mapped in Figure 3, Figure 4 shows 2019 (pre-pandemic) home locations from the LODES data.

Figure 3: Project Area Used in LODES Mapping

Note: the green lines delineate Census blocks.

Figure 4: Project Area Workers' Home Locations⁶

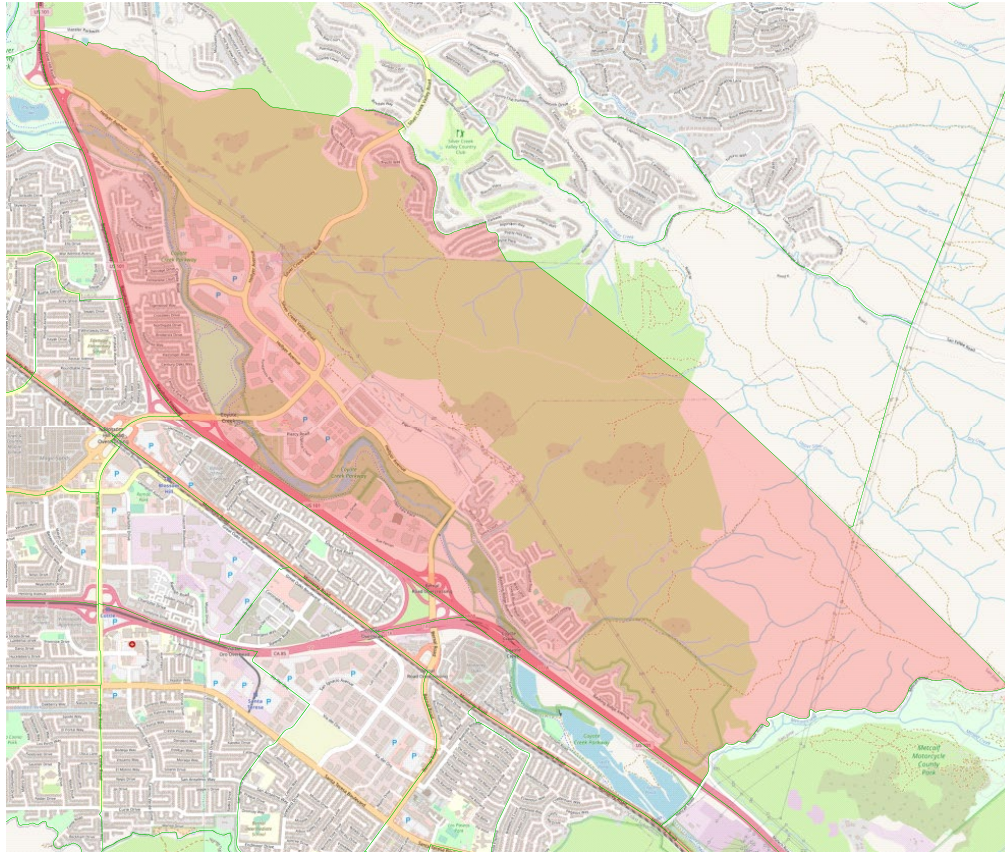

There is a cluster of workers with short commutes, but the residences of project workers are spread widely throughout the greater Bay region and beyond.

⁶ LODS data (<https://lehd.ces.census.gov/data/>) mapped at the Census Tract level.

After subtracting out LODES trips that appear to be longer than 100 miles – some of which represent errors in the data – the mean distance between home and work for project area workers is 18.6 miles. Several adjustments must be made to calculate commuting VMT per worker per day. First, this is a one-way distance which needs to be doubled for round trips. Second, it is a straight-line “as crows fly” distance and the road distances are longer. On the other hand, some commuters carpool and not all commutes are by auto.

A different Census product, the Census Transportation Planning Package (“CTPP”) reports commute mode to Census Tracts. Figure 5 shows the three Tracts selected to represent the project area.

Figure 5: Project Area Census Tract for Census Transportation Planning Package Data

In the project Census Tract, 98.8 percent of commutes to jobs in the project area are made by auto, with an average occupancy of 1.058. 0.7 percent of the commutes are completed by walking, 0.2 percent by bike, and 0.3 percent by transit.⁷

I make the following adjustments to the LODES average trip distance:

- converting one-way to two-way x 2.0
- adjustment for carpooling, transit, walking and biking x 0.934 (from Census data)
- converting from straight-line to road distance x 1.1

⁷These mode shares are based on a sample, so there is uncertainty about the exact values, particularly for the non-auto modes where the estimates are based on few survey responses.

The resulting average is: 38.3 commute VMT per day per worker, on average. This is more than 2 ½ times the 14-15 VMT per day per worker given in the MND.

As discussed above, the Tool is intended to estimate only some of the commute travel – roundtrip in some cases and one-way in others. It is impossible to know how many commute trips are included. If it's 50 percent roundtrips and 50 percent one-way, the Tool's 14-15 VMT per worker by would be multiplied by 1.5 to get about 22 VMT per worker – which is still much lower than the 38.3 VMT per worker estimated from Census data. Therefore, it appears that the Tool significantly underestimates commute VMT even for the portion of the VMT that it is counting.

It could be argued that even though neither the estimate of the City average VMT per worker, nor the estimate of project VMT per worker are correct, the comparison is “apples-to-apples” and therefore valid. This assertion is impossible to test without more accurate VMT estimates because the average and project estimates may be biased by different magnitudes. As discussed below, the model and Tool also appear to make inaccurate mode share estimates. Better estimates are needed.

Both the Tool and the Census data presented here exclude non-commute VMT from trucks, service trips, deliveries, and mid-day employee travel – all of which also are affected by project location. For example, employees working in a walkable mixed-use area will likely walk to lunch if they go out, but employees working in an auto-oriented suburban area like the project site will likely drive to lunch if they go out.

It is challenging to account for all non-commuting VMT, but this makes it even more important that commuting VMT be accurately counted. There is no evidence that the regional model accurately represents average commute trip lengths to the project site, and the model estimates are refuted by Census data. More accurate VMT estimates should be prepared with commuting VMT based on Census data, and non-commuting VMT should be estimated separately.

The MND Overestimates Non-Auto Mode Share and Potential VMT Reduction from Mitigation

The City's *Transportation Analysis Handbook* (April 2023) states:

Adjusting the baseline project vehicle-trips is necessary because people entering or exiting a project often have different mode shares than the ITE sites. (p. 60)

Many, but not all the Institute for Transportation Engineers (“ITE”) Trip Generation count sites are in auto-oriented areas. There also are ITE count sites where only vehicles were counted but where there also were a significant number of (uncounted) non-auto trips. As documented above, in the project site Census Tract only 1.2 percent of commute trips are non-auto. It is unlikely that the ITE sites, on average, have a significantly lower non-auto mode share than 1.2 percent so a trip generation reduction is unwarranted in this location.

The City's guidance, based on the City's travel demand model, calls for a minimum 5 percent reduction based on calculated non-auto mode share and this 5 percent reduction is listed for "Suburban with Single-Family Homes."⁸ This 5 percent reduction was applied in the MND (MND, Table 24, p. 175).

⁸ City of San Jose. *Transportation Analysis Handbook* (April 2023), Table 17, p. 60.

This 5 percent reduction may seem like a minor issue but is indicative of a larger misunderstanding about the potential for non-auto mode share in this location that carries into the MND’s mitigation discussion. The MND VMT analysis indicates that mitigation is required to meet the City’s VMT threshold. The mitigation proposed includes:

- Traffic Calming Measures and Bike Access Improvements. The project development shall include narrowing of the existing roadway lane widths along Silicon Valley Boulevard to implement Class IV protected bikeways in both directions between Hellyer Avenue and Eden Park Place. The project also includes the installation of the on-street Class IV bikeway per City standards along the project’s frontage along Hellyer Avenue. The bike lanes would connect the existing Coyote Creek Trailheads and encourage the use of bicycles (see Appendix H, Figure 6 for conceptual designs of the planned improvements).
- Pedestrian Network Improvements. The pork-chop island on the southwest corner at the Hellyer Avenue and Silicon Valley Boulevard intersection shall be removed (see Appendix H, Figure 6). The improvement shall require tightening the corner radius at the southeast corner and modifying the signal to accommodate pork chop island removals. This shall improve the multi-modal environment by eliminating unsignalized pedestrian/vehicle conflict points, increasing visibility of pedestrians at the intersection corner, and providing a safer refuge for pedestrians waiting to use the crosswalks. (MND 168)

The MND claims (based on the Tool) that these measures would reduce project VMT by 4.8 percent relative to the baseline (MND, p. 169), i.e., that the addition of a short bike lane and pedestrian improvements at a single intersection would increase non-auto mode share at this location by a factor of five relative to today. This is at least 10 times what the true reduction would be in this location from the proposed mitigation.

The VMT Analysis and Mitigation Fail to Address the True VMT Problem – Housing

The fundamental problem is that most workers cannot afford to live within walking or biking distance of the project. The long average commutes documented to the project site are a common problem throughout the City and the larger Bay Area. The City of San José 2023-2031 Housing Element Draft Supplemental Environmental Impact Report (March 2023) states:

The City continues to be one of the most expensive places to live in the country. In the first quarter of 2022, the median single-family home was \$1.7 million, the median condo/townhome was \$900,000, and median monthly rent was \$2,595 (City of San José, 2022).⁹

Common housing affordability guidelines are not spending more than 30 percent on rent and utilities or more than 28 percent on housing mortgage, interest, and taxes. These guidelines imply an average annual household income of over \$100,000 for the median apartment, and hundreds of thousands in annual household income for ownership – even of a townhouse or condo. Few of the industrial jobs for the proposed project will pay enough for workers to live in San Jose.

⁹ <https://www.sanjoseca.gov/home/showpublisheddocument/95339/638142607402130000>

The affordability problem is aggravated by the lack of good transit access to the project site. The MND states:

The project site is served by a single bus route (VTA Local Route 42). Route 42 travels along Silver Creek Valley Road, Hellyer Avenue and Silicon Valley Boulevard in the project vicinity and provides service between Evergreen Valley College and Santa Teresa Station. Route 42 runs on 60-minute headways between 6:00 AM and 7:00 PM and provides service to the Blossom Hill Caltrain station via its connection to Rapid Route 568. (MND, p. 164)

A 60-minute headway is not close to being adequate for commuters. Nevertheless, the MND highlights this poor transit service in the Energy section:

The inclusion of bicycle parking and proximity to transit would incentivize the use of alternative methods of transportation to and from the site. (MND, p. 82)

Th housing affordability issue is particularly problematic for low-income workers. The LODES data are segmented across three earnings groups:

- \$1250/month or less (less than \$15,000 per year)
- \$1251/month to \$3333/month (\$15,000 to \$40,000 per year)
- greater than \$3333/month (greater than \$40,000 per year)

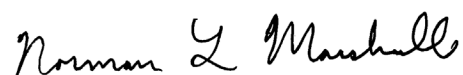

The lowest income category is clearly less than a livable wage so it is difficult to understand how workers in this category could afford long commutes. Nevertheless, the average commute distance in the Census data for this low-income category is 20 percent higher than for all employees. The cost of housing is outweighing the cost and inconvenience of long commutes for these workers.

Without a better jobs/housing balance, adding jobs to this area will inevitably add significant VMT, and a methodology is needed that accurately estimates the true VMT impacts.

VMT Impacts Are Integral to the Project's GHG Impacts

The MND uses CalEEMod 2020 4.0 to estimate mobile greenhouse gas emission. The modeling assumes default average trip lengths of 9.5 miles for home-based work trips and 7.3 for other passenger trips (MND, App. A., p. 74 of 136) The 9.5-mile length for work trips is clearly much too low relative to Census data. It should be increased and GHG emissions recalculated. The MND applies a somewhat higher average trip length of 24 miles for truck trips. (MND, App. A, p.18 of 136) It is difficult to estimate truck trip lengths without knowing the nature of the businesses, but an explanation of the 24-mile length should be provided.

Sincerely,

Norman L. Marshall

Resume

NORMAN L. MARSHALL, PRESIDENT

nmarshall@smartmobility.com

EDUCATION:

Master of Science in Engineering Sciences, Dartmouth College, Hanover, NH, 1982

Bachelor of Science in Mathematics, Worcester Polytechnic Institute, Worcester, MA, 1977

PROFESSIONAL EXPERIENCE: (32 Years, 18 at Smart Mobility, Inc.)

Norm Marshall helped found Smart Mobility, Inc. in 2001. Prior to this, he was at RSG for 14 years where he developed a national practice in travel demand modeling. He specializes in analyzing the relationships between the built environment and travel behavior and doing planning that coordinates multi-modal transportation with land use and community needs.

Regional Land Use/Transportation Scenario Planning

Portland Area Comprehensive Transportation System (PACTS) – the Portland Maine Metropolitan Planning Organization. Updating regional travel demand model with new data (including AirSage), adding a truck model, and multiclass assignment including differentiation between cash toll and transponder payments.

Loudoun County Virginia Dynamic Traffic Assignment – Enhanced subarea travel demand model to include Dynamic Traffic Assignment (Cube). Model being used to better understand impacts of roadway expansion on induced travel.

Vermont Agency of Transportation-Enhanced statewide travel demand model to evaluate travel impacts of closures and delays resulting from severe storm events. Model uses innovative Monte Carlo simulations process to account for combinations of failures.

California Air Resources Board – Led team including the University of California in \$250k project that reviewed the ability of the new generation of regional activity-based models and land use models to accurately account for greenhouse gas emissions from alternative scenarios including more compact walkable land use and roadway pricing. This work included hands-on testing of the most complex travel demand models in use in the U.S. today.

Climate Plan (California statewide) – Assisted large coalition of groups in reviewing and participating in the target setting process required by Senate Bill 375 and administered by the California Air Resources Board to reduce future greenhouse gas emissions through land use measures and other regional initiatives.

Chittenden County (2060 Land use and Transportation Vision Burlington Vermont region) – led extensive public visioning project as part of MPO's long-range transportation plan update.

Flagstaff Metropolitan Planning Organization – Implemented walk, transit and bike models within regional travel demand model. The bike model includes skimming bike networks including on-road and off-road bicycle facilities with a bike level of service established for each segment.

Chicago Metropolis Plan and Chicago Metropolis Freight Plan (6-county region)— developed alternative transportation scenarios, made enhancements in the regional travel demand model, and used the enhanced

model to evaluate alternative scenarios including development of alternative regional transit concepts. Developed multi-class assignment model and used it to analyze freight alternatives including congestion pricing and other peak shifting strategies.

Municipal Planning

City of Grand Rapids – Michigan Street Corridor – developed peak period subarea model including non-motorized trips based on urban form. Model is being used to develop traffic volumes for several alternatives that are being additionally analyzed using the City’s Synchro model

City of Omaha - Modified regional travel demand model to properly account for non-motorized trips, transit trips and shorter auto trips that would result from more compact mixed-use development. Scenarios with different roadway, transit, and land use alternatives were modeled.

City of Dublin (Columbus region) – Modified regional travel demand model to properly account for non-motorized trips and shorter auto trips that would result from more compact mixed-use development. The model was applied in analyses for a new downtown to be constructed in the Bridge Street corridor on both sides of a historic village center.

City of Portland, Maine – Implemented model improvements that better account for non-motorized trips and interactions between land use and transportation and applied the enhanced model to two subarea studies.

City of Honolulu – Kaka’ako Transit Oriented Development (TOD) – applied regional travel demand model in estimating impacts of proposed TOD including estimating internal trip capture.

City of Burlington (Vermont) Transportation Plan – Led team that developing Transportation Plan focused on supporting increased population and employment without increases in traffic by focusing investments and policies on transit, walking, biking and Transportation Demand Management.

Transit Planning

Regional Transportation Authority (Chicago) and Chicago Metropolis 2020 – evaluated alternative 2020 and 2030 system-wide transit scenarios including deterioration and enhance/expand under alternative land use and energy pricing assumptions in support of initiatives for increased public funding.

Capital Metropolitan Transportation Authority (Austin, TX) Transit Vision – analyzed the regional effects of implementing the transit vision in concert with an aggressive transit-oriented development plan developed by Calthorpe Associates. Transit vision includes commuter rail and BRT.

Bus Rapid Transit for Northern Virginia HOT Lanes (Breakthrough Technologies, Inc and Environmental Defense.) – analyzed alternative Bus Rapid Transit (BRT) strategies for proposed privately-developing High Occupancy Toll lanes on I-95 and I-495 (Capital Beltway) including different service alternatives (point-to-point services, trunk lines intersecting connecting routes at in-line stations, and hybrid).

Roadway Corridor Planning

I-30 Little Rock Arkansas – Developed enhanced version of regional travel demand model that integrates TransCAD with open source Dynamic Traffic Assignment (DTA) software, and used to model I-30 alternatives. Freeway bottlenecks are modeled much more accurately than in the base TransCAD model.

South Evacuation Lifeline (SELL) – In work for the South Carolina Coastal Conservation League, used Dynamic Travel Assignment (DTA) to estimate evaluation times with different transportation alternatives in coastal South Carolina including a new proposed freeway.

Hudson River Crossing Study (Capital District Transportation Committee and NYSDOT) – Analyzing long term capacity needs for Hudson River bridges which a special focus on the I-90 Patroon Island Bridge where a microsimulation VISSIM model was developed and applied.

Subject: Comments on the Initial Study and Mitigated Negative Declaration for the 550 Piercy Road Industrial Development Project

Dear Ms. Papayanis:

This letter contains my comments on the Initial Study and Mitigated Negative Declaration (“IS/MND”) prepared by the City of San José (“City”) for the 550 Piercy Road Industrial Development Project (“Project”). HUSPRF INVESTOR SPV I LP (“Applicant”) proposes construction of two industrial buildings on a 28.9-acre parcel located at 550 Piercy Road in San José, California. The Project would be subject to the fees and conditions of the Santa Clara Valley Habitat Plan (“SCVHP”), a joint habitat conservation plan and natural community conservation plan.

I am an environmental biologist with 30 years of professional experience in wildlife biology and natural resources management. I have served as a biological resources expert for over 200 projects in California. My experience and scope of work in this regard has included assisting various clients with evaluations of biological resource issues; preparation and peer review of environmental compliance documents prepared pursuant to the California Environmental Quality Act (“CEQA”) and the National Environmental Policy Act (“NEPA”); and preparation of written comments that address deficiencies with CEQA and NEPA documents. My work has included written and oral testimony for the California Energy Commission, California Public Utilities Commission, and Federal courts. My educational background includes a B.S. in Resource Management from the University of California at Berkeley, and a M.S. in Wildlife and Fisheries Science from the Pennsylvania State University. A copy of my current curriculum vitae is attached hereto.

The comments herein are based on my review of the environmental documents prepared for the Project, a review of scientific literature pertaining to biological resources known to occur in the Project area, and the knowledge and experience I have acquired during my 30-year career in the field of natural resources management.

ENVIRONMENTAL SETTING

Insufficient Baseline Data

According to the IS/MND:

“DD&A Senior Environmental Scientist Matt Johnson conducted a survey of the project site on June 24, 2022, to characterize site habitat features and to identify any special-status plant or wildlife species or suitable habitat for these species within the site. Survey methods included walking the project site to identify general habitat and potential sensitive habitat types, conducting an assessment of potential wetlands and other waters, conducting a reconnaissance-level habitat survey to identify any special-status wildlife species or suitable habitat for special-status plant and wildlife species occurring within the site, and conducting a focused survey for perennial and late spring-blooming special-status plant species.”¹

The IS/MND fails to identify: (1) the time of day the survey was conducted; (2) the qualifications of the individual who conducted the survey; and, (3) the level of effort (i.e., total man-hours) devoted to identification of plant and animal species at the Project site. This information is essential to evaluating the adequacy of the survey in establishing the Project’s environmental baseline. It also affects the validity of DD&A’s determination that most special-status species have a “low” or “unlikely” potential to occur at the Project site because they were “not observed during [the] biological survey.”² For example, the failure to observe special-status plants at the Project site would not be evidence that those species are “unlikely” at the site if minimal effort was devoted to plant identification, or if the surveyor was not a qualified botanist. This issue is compounded by the IS/MND’s failure to provide a list of plant and animal species that were detected during the survey. In addition to providing an indication of the level of effort devoted to the survey, a list of plant species detected at the site is essential to evaluating potential impacts to the Bay checkerspot butterfly, which is dependent on specific plant species for reproduction and survival.

Special-Status Plants

The Biological Resources Report (IS/MND, Appendix B) states the following regarding California Rare Plant Rank (“CRPR”) 3 and 4 species: “[w]hile other species (i.e., CRPR 3 or 4 species) are sometimes found in database searches or within the literature, these do not meet the definitions of Section 2062 and 2067 of CESA and are not analyzed in this document.”³ This statement is inconsistent with the report’s statement that “CRPR 4 species (plants of limited distribution) *may*, but generally do not, meet the definitions of Sections 2062 and 2067 of

¹ IS/MND, Appendix B (Biological Resources Report), p. 6.

² *Ibid*, Appendix D (Special-Status Species Table).

³ *Ibid*, p. 8.

CESA.”⁴ It is also inconsistent with CNPS guidelines regarding consideration of CRPR 4 plant taxa in CEQA impact analysis.⁵

The Project Fails to Comply with the Terms of the SCVHP

To ensure plant species covered under the Santa Clara Valley Habitat Plan (“SCVHP”) are adequately conserved, the SCVHP identifies locations where surveys for plants covered under the SCVHP are required. The SCVHP states:

“These surveys will be performed according to the current applicable guidelines of CDFG and/or USFWS for plant surveys (if available) except no floristic surveys are required. The appropriate survey period for each covered plant species is described in Table 6-9. Surveys must be conducted at the time of year when the species can be identified in the field.”^{6,7}

The majority (28.4 acres) of the Project site lies within one of the SCVHP “Plant Survey Areas.”⁸ DD&A’s survey of the Project site did not conform to the terms of the SCVHP because the survey was not conducted during the appropriate survey period for fragrant fritillary or smooth lessingia (two of the covered plant species),⁹ both of which have the potential to occur at the site.¹⁰ In addition, there is no evidence that the survey was conducted when other special-status plant species were detectable (if present), because the surveyor did not visit nearby reference sites to confirm the target species were evident and identifiable at the time of the botanical field survey.¹¹ Visits to nearby reference sites are especially important during drought years, because many annual plants do not germinate (or germinate in low abundance) during droughts. DD&A’s June 2022 survey was conducted during a drought (there was only 0.66 inches of precipitation between January and June [mean 14.16 inches]).¹² The California Department of Fish and Wildlife (“CDFW”) survey guidelines state:

“Adverse conditions from yearly weather patterns may prevent botanical field surveyors from determining the presence of, or accurately identifying, some special status plants in the project area. Disease, drought, predation, fire, herbivory, or other disturbance may also preclude the presence or identification of

special status plants in any given year... When special status plants are known to occur in the type(s) of habitat present in a project area, observe reference sites (nearby accessible occurrences of the plants) to determine whether those special status plants are identifiable at the times of year the botanical field surveys take place and to obtain a visual image of the special status plants, associated habitat, and associated natural communities.”¹³

Burrowing Owl

The single survey conducted by DD&A does not provide sufficient data to infer presence (or absence) and seasonal use patterns of burrowing owls at the Project site. As a result, the City does not have the data needed to make a valid determination on the significance of the Project’s impacts on burrowing owls.

CDFW’s 2012 Staff Report on Burrowing Owl Mitigation recommends three distinct types of surveys: breeding season surveys, non-breeding season surveys, and take avoidance (preconstruction) surveys. The 2012 Staff Report refers to the breeding season and non-breeding season surveys as “detection surveys.” Breeding season surveys entail four survey visits: (1) at least one site visit between 15 February and 15 April, and (2) a minimum of three survey visits, at least three weeks apart, between 15 April and 15 July, with at least one visit after 15 June.¹⁴ Non-breeding season surveys entail four survey visits spread evenly throughout the non-breeding season.¹⁵ The need for four independent survey visits during each season is based on burrowing owl detection probabilities reported in scientific studies.¹⁶ Collectively, these surveys are designed to provide the data needed to effectively assess potential impacts and guide the development of avoidance, minimization, and mitigation measures.¹⁷ The purpose of take avoidance surveys is to confirm circumstances have not changed since completion of the detection surveys (e.g., burrowing owls have not colonized new burrows). Take avoidance surveys, such as those proposed in MM BIO-3a, are not a valid substitute for detection surveys because they do not provide adequate data to ensure impact avoidance (unless detection surveys have also been conducted).

IMPACTS

Rare Plants

The IS/MND’s analysis of impacts to special-status species is limited to species that are “known to or have been determined to have a moderate or high potential to occur within or immediately adjacent to the project site.”¹⁸ Accordingly, the IS/MND provides no analysis of, or mitigation

¹³ California Department of Fish and Wildlife. 2018. Protocols for Surveying and Evaluating Impacts to Special Status Native Plant Populations and Sensitive Natural Communities. pp. 6 and 7.

¹⁸ IS/MND, p. 58.

for, the Project’s impacts on special-status plant species because DD&A determined all potentially occurring species are either “not present” or “unlikely.”¹⁹

There are several flaws with the IS/MND’s rationale. First, DD&A’s biological resources survey was confined to the Project site,²⁰ and DD&A’s Biological Resources Report does not provide an assessment of the potential for special-status plant species to occur immediately adjacent to the Project site. As a result, there is no evidence supporting the City’s decision to forgo analysis of potentially significant indirect impacts to special-status plants that could occur immediately adjacent to the Project site.

Second, the *assumption* that a special-status species is “unlikely” to occur at the Project site is not evidence that no significant impacts would occur to that species because “unlikely” is not equivalent to “absent.” Because there is limited knowledge of many plant species, it is relatively common for botanists to detect a special-status plant in an unexpected location. Consequently, protocol-level botanical surveys are needed to determine presence or absence of special-status plants when natural (or naturalized) vegetation occurs in an area that may be directly or indirectly affected by a project.²¹ Protocol-level botanical surveys were not conducted at the Project site. Indeed, the Biological Resources Report states that the survey was conducted solely for perennial and late spring-blooming species,²² and thus, there were no surveys for special-status plants that bloom in early spring or the summer. At a minimum, DD&A’s survey was conducted too early in the year for smooth lessingia, and too late in the year for fragrant fritillary, California alkali grass, and potentially pink creamsacs.²³

Third, DD&A’s rationale for the “unlikely” determinations was that: (a) only marginally suitable habitat is present at the Project site, and (b) the given species was not observed during the biological survey.²⁴ However, the Biological Resources Report does not provide evidence that habitat at the Project site is only “marginally suitable,” nor does it provide evidence that the 14 “unlikely” species would have been evident and identifiable at the time of the survey.

Fourth, the absence of known occurrences within or immediately adjacent to the Project site is not evidence that special-status plants are unlikely to occur at the site. Because all plant databases (including the California Natural Diversity Database) are populated by positive detections, there is bias in those databases towards locations that have had more survey work. There is no evidence that the Project site or immediately adjacent areas have previously been surveyed for special-status plants, thus rendering it impossible for there to be “known” occurrences of special-status plants.

American Badger

The IS/MND determined that the American badger, a California Species of Special Concern that is not covered under the SCVHP, has moderate potential to occur at the Project site. The IS/MND states: “[c]onstruction activities may result in direct mortality of individuals *and/or loss of habitat* for this species if present within the project site during construction.”²⁵ The IS/MND determined these impacts to the American badger would be less than significant with implementation of MM BIO-1a and BIO-1b.

The determination that impacts to the American badger would be less than significant with implementation of Mitigation Measures BIO-1a and BIO-1b is not supported by evidence because neither measure mitigates the potentially significant impact associated with habitat loss from the Project site; both measures are directed solely at minimizing the potential for the Project to cause direct mortality of badgers. Whereas it is appropriate for the IS/MND to incorporate measures to minimize mortality, habitat loss is the primary threat to American badger populations in California.²⁶ As a result, the Project’s impacts on the American badger remain potentially significant.

Burrowing Owl

The IS/MND provides the following analysis of Project impacts to burrowing owls: “[w]estern burrowing owls have the potential to occur within the project site. Construction activities may result in direct mortality of individuals and/or loss of habitat for these species if present within the project site during construction.”²⁷ Although the IS/MND determined that habitat loss associated with the Project was a potentially significant impact, it does not incorporate any mitigation for this habitat loss.

The IS/MND fails to provide any analysis of potentially significant indirect impacts on burrowing owls. Burrowing owls are associated with grasslands and other open habitat types. Because burrowing owls are a prey species for other raptors, they avoid habitats with trees, which provide perch sites for raptors and preclude predator detection.²⁸ As a result, the Applicant’s plan to install 279 trees²⁹ in a landscape largely devoid of trees constitutes a significant indirect impact on any burrowing owls that occupy habitat adjacent to the Project site.

Burrowing owls are nearly extirpated from the greater San Francisco Bay Area.³⁰ When Townsend and Lenihan conducted their status assessment in 2003, the most abundant breeding

³⁰ Townsend SE, Lenihan C. 2003. Burrowing Owl Status in the Greater San Francisco Bay Area. Proceedings of the California Burrowing Owl Symposium. Bird Populations Monographs No. 1:60-70.

populations in the Bay Area were in Santa Clara County (101 pairs),³¹ Alameda County (47 pairs), and Contra Costa County (14 pairs).³² Since then, the number of breeding burrowing owls has declined precipitously, due in large part to rapid and extensive urban development.³³ In 2022, only 16 breeding pairs, at 4 breeding sites, remained in the SCVHP expanded study area (however, two of these pairs were in captivity).³⁴ As a result, presence of additional burrowing owls at the Project site would have tremendous importance in attempts to maintain Santa Clara County's burrowing owl population.

The IS/MND determined that implementation of measures BIO-3a through BIO-3c would reduce the Project's impacts on burrowing owls to less-than-significant levels.³⁵ The IS/MND states: "[t]his mitigation is based upon the survey requirements in the SCVHP and derived from the CDFW burrowing owl survey protocol."³⁶

The IS/MND's determination that implementation of the SCVHP's mitigation measures would reduce Project impacts to less-than-significant levels is not supported by evidence because the SCVHP *has not been effective* in maintaining Santa Clara County's burrowing owl population. Since adoption of the SCVHP in 2013, the amount of occupied burrowing owl habitat in the SCVHP study area has decreased by 47%, while the number of adult burrowing owls has declined by 73%.^{37,38} As reported in the Santa Clara Valley Habitat Agency's 2022 survey report: "[c]urrently, the goal of establishing a stable, then increasing owl population is not being met and the Habitat Agency will be working with the regulatory agencies and the Burrowing Owl Expert Team to explore and implement additional conservation measures in 2023."^{39,40}

Due to the perilous status of burrowing owls in Santa Clara County, and because the mitigation measures proposed in the IS/MND have proven ineffective in conserving the burrowing owl population, Project impacts on burrowing owls (if present) would be significant and unavoidable.

³¹ The majority of these pairs occurred in the SCVHP expanded study area.

⁴⁰ Although this statement has been made in every survey report since 2017, there has been no success in meeting the goal of establishing a stable, then increasing burrowing owl population.

Crotch Bumble Bee, Western Bumble Bee, Loggerhead Shrike

DD&A reviewed the CNDDDB (and other sources) to develop a list of special-status plant and wildlife species known or with the potential to occur in the vicinity of the project site.⁴¹

According to the Biological Resources Report, this list was used to create Appendix D (to the Biological Resources Report), which identifies the species along with their legal status, habitat requirements, and potential to occur within the Project site.⁴²

The Crotch bumble bee and western bumble bee are candidates for listing under the California Endangered Species Act. This provides them with the same legal protection afforded to an endangered or threatened species.⁴³ Both species are associated with grasslands, and because they nest primarily underground, they could be significantly impacted by Project construction activities.⁴⁴

The loggerhead shrike is a California Species of Concern. Loggerhead shrikes require open areas of short grasses, forbs, or bare ground for hunting, and large shrubs or trees for nest placement.⁴⁵ Habitat loss is a major threat to the loggerhead shrike.⁴⁶

There are several recent “research grade” iNaturalist records of Crotch bumble bee in Santa Clara County.⁴⁷ In addition, there is an eBird record of three adults and one brood of two recently fledged loggerhead shrikes that were detected at the northwest corner of the Project site.⁴⁸ Although all three of these species appeared in DD&A’s review of the CNDDDB,⁴⁹ and although all three species have the potential to occur at the Project site, they were not included in the Biological Resources Report’s list of potentially occurring species (Appendix D), nor were impacts to these species analyzed in the IS/MND.

Swainson’s Hawk

The Swainson’s hawk is listed as a threatened species under the California Endangered Species Act and it is not a covered species under the SCVHP. According to the Biological Resources

⁴⁹ IS/MND, Appendix B (Biological Resources Report), Appendix B (California Natural Diversity Database Report).

Report, the Project site provides suitable foraging habitat for Swainson's hawks.⁵⁰ However, the IS/MND does not analyze impacts to Swainson's hawk foraging habitat because the Biological Resources Report determined there is "low" potential for the species to occur at the site. The Biological Resources Report provided the following rationale for this determination:

"Closest species occurrence is approximately 10.5 miles northwest of the project site. Records indicate this population is possibly extirpated due to loss of nesting habitat ... Species was not observed during biological surveys."⁵¹

The information provided in the Biological Resources Report is incorrect. There is a Swainson's hawk nest site approximately 4.25 miles south of the Project site. This nest site has been active since at least 2013.⁵² Additional nest sites may be located closer to the Project site; however, DD&A did not conduct protocol-level surveys to identify nesting Swainson's hawks that could be affected by the Project.⁵³ Swainson's hawks may use in excess of 15,000 acres of habitat or range up to 18 miles from the nest in search of prey.⁵⁴ Therefore, DD&A's failure to observe Swainson's hawks during a single survey (of unspecified duration) is not evidence that the species has a "low" potential to occur at the Project site.

Loss of foraging habitat is one of the primary threats to Swainson's hawks in California.⁵⁵ In addition to generating a potentially significant impact under CEQA, the loss of foraging habitat from the Project site may result in the take (killing) of Swainson's hawks, which would be a violation of Section 2080 of California Fish and Game Code.⁵⁶

To reverse the decline of Swainson's hawk populations, it is CDFW's policy that new development projects that adversely modify nesting or foraging habitat within 10 miles of an active nest should mitigate the project's impacts by providing compensatory mitigation.⁵⁷ An active nest is located within 5 miles of the Project site. Therefore, in accordance with CDFW mitigation guidelines:

"Projects within 5 miles of an active nest tree but greater than 1 mile from the nest tree shall provide 0.75 acres of HM [Habitat Management] land for each acre of urban development authorized (0.75:1 ratio). All HM lands protected under this requirement may be protected through fee title acquisition or conservation easement (acceptable to the Department) on agricultural lands or other suitable habitats which provide foraging habitat for Swainson's hawk."⁵⁸

⁵⁷ *Ibid.*

⁵⁸ *Ibid.*, p. 12.

Because the Project site provides foraging habitat for Swainson's hawks, and because the IS/MND does not require compensatory mitigation for impacts to that habitat, the Project would have an unmitigated, potentially significant impact on the Swainson's hawk.

Wildlife Movement

The IS/MND provides the following analysis of Project impacts to wildlife movement and migratory wildlife corridors:

“The project is proposed in a semi-urbanized setting and has not been found to contain any native resident or wildlife species. The southwestern adjacent parcel contains Coyote Creek riparian woodlands approximately 380 feet southwest of the Hellyer Avenue border of the project site. The northwestern adjacent parcel contains serpentine bunchgrass grasslands, located approximately 510 feet northwest of the Piercy Road border of the project site. There are no streams, creeks or wetlands located on the project site, which is largely dominated by nonnative annual forbs and dirt roads. Therefore, the proposed project would have a less than significant impact with respect to interfering substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors or impede the use of native wildlife nursery sites.”⁵⁹

The IS/MND's statement that the Project site “has not been found to contain any native resident or wildlife species” is not supported by evidence, is unrealistic, and is inconsistent with the IS/MND's description of wildlife species that may be found in annual grasslands.⁶⁰ The only other “evidence” the IS/MND provides for its “less than significant impact” determination is that: (a) the Project site is located in a semi-urbanized setting; and (b) “[t]here are no streams, creeks or wetlands located on the project site, which is largely dominated by nonnative annual forbs and dirt roads.” The author's rationale appears to be based on the belief that wildlife does not move through semi-urbanized settings or annual grasslands, and that movement corridors are confined to streams, creeks or wetlands. This belief is false. Annual grasslands function as movement corridors for numerous species, including the American badger, mountain lion, northern harrier, burrowing owl, loggerhead shrike, grasshopper sparrow, California tiger salamander, California red-legged frog, and numerous other grassland specialists.⁶¹ Although Piercy Road and Hellyer Avenue may hinder movement of some species, they do not represent a complete movement barrier (except perhaps to amphibians).

The Project site represents one of the last remaining movement corridors between the Silver Creek Hills and Coyote Creek (Figure 1, below). If the Project site and adjoining parcel are developed,⁶² the only remaining movement corridor between habitat in the Silver Creek Hills

⁵⁹ IS/MND, p. 65.

⁶² Industrial development is also proposed for the open space parcel southeast of the Project site. See IS/MND, p. 140.

and Coyote Creek would be located approximately 1.7 miles north of the Project site and north of Silver Creek Valley Road (a major arterial between Highway 101 and Yerba Buena Road) (Figure 2, below).

Areas of Conservation Emphasis (“ACE”) is a CDFW effort to gather spatial data on wildlife, vegetation, and habitats from across the state, and then synthesize this information into thematic maps to help inform decisions on the conservation of biodiversity, habitat connectivity, and climate change resiliency. The “Terrestrial Connectivity” dataset is one of the four key components of ACE, and it assigns a rank (range 1 to 5) to all lands within the state based on the land’s conservation importance to connectivity.⁶³ The Project site has an ACE terrestrial connectivity rank of 4.⁶⁴ ACE Rank 4 areas are defined as *Conservation Planning Linkages*. These linkages represent the best connections between core natural areas, but have more implementation flexibility than *Irreplaceable and Essential Corridors* (ACE Rank 5 areas).⁶⁵ In addition to containing an ACE Conservation Planning Linkage, a portion of the Project site lies within the Santa Cruz Mountains – Diablo Range Linkage identified in Critical Linkages: Bay Area & Beyond project (Figure 3, below).⁶⁶

For these reasons, there is substantial evidence that the Project could have a significant impact on a wildlife movement corridor.

Figure 2. Urban development has created a barrier to wildlife movement between the Silver Creek Hills and Coyote Creek. If the Project site (in red) and adjacent parcel (in blue) are developed, the only remaining movement corridor between habitat in the Silver Creek Hills and Coyote Creek would be located approximately 1.7 miles north of the Project site (green arrow).

Figure 3. Santa Cruz Mountains – Diablo Range Linkage (shaded purple) in relation to the Project site.

Invasive Plants

The Biological Resources Report states: “[t]he California Invasive Plant Council (Cal-IPC) Inventory (Cal-IPC, 2022) was reviewed to determine if any invasive plant species were present within the project site.”⁶⁷ The Biological Resources Report further states that the northwestern adjacent parcel contains serpentine bunchgrass grasslands, and that invasive plant species are a threat to serpentine bunchgrass communities.⁶⁸ However, neither the Biological Resources Report nor the IS/MND discusses the results of the Cal-IPC Inventory review. This precludes the public’s understanding of the Project’s environmental setting, the City’s ability to formulate appropriate mitigation, and compliance with General Plan Policy ER-6.9.⁶⁹

The Project involves a considerable amount of soil disturbance.⁷⁰ Disturbed soil provides an opportunity for invasive plants to establish and spread, to compete with native species, and to colonize new areas.⁷¹ Soil disturbance at the Project site has the potential to facilitate the spread

⁶⁷ IS/MND, Appendix B (Biological Resources Report), p. 7.

⁶⁸ *Ibid*, pp. 15 and 18.

⁶⁹ Policy ER-6.9 states: “Work with landowners, landscapers, nurseries, and the multi-agency Santa Clara County Weed Management Area to remove and prevent the spread of highly invasive and noxious weeds.”

⁷⁰ IS/MND, p. 16.

⁷¹ Cal-IPC. 2012. Preventing the Spread of Invasive Plants: Best Management Practices for Land Managers (3rd ed.). Cal-IPC Publication 2012-03. California Invasive Plant Council, Berkeley, CA. pp. 27 and 28.

of invasive plant propagules from the Project the Project site to off-site areas, including the nearby serpentine bunchgrass grasslands and the Coyote Creek riparian corridor.

The IS/MND does not incorporate mitigation to minimize the Project’s potential to introduce invasive plant species or facilitate their spread into off-site areas. As a result, potentially significant impacts associated with the colonization and spread of invasive plants remain unmitigated.

Cumulative Impacts

CEQA Guidelines Section 15130 require analysis of the incremental effects of an individual project when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects. The IS/MND does not comply with CEQA Guidelines because the cumulative effects analysis is limited to current “development proposals” within 1,000 feet of the proposed Project, thus ignoring the effects of past projects, or the effects of probable future projects.⁷²

CEQA Guidelines Section 15130(b)(3) direct lead agencies to define the geographic scope of the area affected by the cumulative effect and provide a reasonable explanation for the geographic limitation used. The IS/MND fails to provide an explanation for limiting the cumulative impacts analysis to proposed development projects within 1,000 feet of the proposed Project.⁷³

The IS/MND’s “analysis” of cumulative impacts to biological resources is limited to “impacts on biological resources during construction from disturbance to nesting birds.”⁷⁴ The IS/MND provides no analysis of the Project’s contribution to cumulative impacts on the American badger, or on habitat for special-status species (e.g., American badger, burrowing owl, grasshopper sparrow).

An industrial building is proposed for development at 644-675 Piercy Road.⁷⁵ That project, in connection with the proposed Project and past projects, would eliminate a substantial amount of habitat within the geographic area analyzed in the IS/MND (i.e., within 1,000 feet of the proposed Project). In addition, the cumulative projects would eliminate one of the last wildlife movement corridors between the Silver Creek Hills and Coyote Creek. As a result, the Project’s incremental contribution to cumulative impacts is potentially significant.

MITIGATION

Mitigation Measure BIO-1b (American Badger)

MM BIO-1b states:

“A qualified biologist shall conduct focused pre-construction surveys for badger dens no more than two weeks prior to construction in all suitable habitat proposed

⁷² IS/MND, p. 191.

⁷³ *Ibid.*

⁷⁴ *Ibid.*

⁷⁵ *Ibid.*

for construction, ground disturbance, or staging. If no potential badger dens are present, no further mitigation is required.”

Badgers have relatively large home ranges and some badgers dig a new den each night.⁷⁶ As a result, a survey conducted up to two weeks prior to construction activities does not ensure Project impacts to occupied badger dens would be avoided.

MM BIO-1b further states:

“If potential dens are observed, the following measures are required to avoid potential significant impacts to the American badger:

- If the qualified biologist determines that potential dens are inactive, the biologist shall excavate these dens by hand with a shovel to prevent badgers from re-using them during construction.
- If the qualified biologist determines that potential dens may be active, the entrances of the dens shall be blocked with soil, sticks, and debris for three to five days to discourage the use of these dens prior to project disturbance. The den entrances shall be blocked to an incrementally greater degree over the three- to five-day period. After the qualified biologist determines that badgers have stopped using active dens within the project boundary, the dens shall be hand-excavated with a shovel to prevent re-use during construction.”
- If the qualified biologist determines that the potential den is an active natal den the qualified biologist shall establish a no-construction buffer around the den. The buffer will be delineated by fencing or flagging. No construction shall be allowed inside the buffer until the qualified biologist determines the young are no longer reliant upon the den for survival.”

There are several reasons why these measures would not ensure impacts to the American badger are mitigated to less-than-significant levels. First, MM BIO-1b fails to establish a mechanism that would ensure the “qualified biologist” has experience with badgers and the expertise necessary to successfully implement the provisions of MM BIO-1b.

Second, MM BIO-1b allows the biologist to block the den (with soil, sticks, and debris) if it is not an active natal den. However, there are no reliable means of distinguishing natal dens from dens used for other purposes, and because badger dens can be several meters deep and long, a biologist cannot merely look into a den to determine presence of young (kits). In addition, because badger kits do not emerge from the natal burrow until they are six to eight weeks old, it is unlikely a biologist would be able to determine presence (or absence) of a natal den based on data collected during a single survey. For these reasons, any activities that evict or exclude a badger from its den during the natal rearing period (typically March through July) can cause significant impacts by precluding nursing and other natal activities essential to survival of the kits.

⁷⁶ California Department of Fish and Wildlife. California Interagency Wildlife Task Group. 2005. CWHR version 9.0 personal computer program. Sacramento, CA. Life history account for American badger. Available at: <<https://nrm.dfg.ca.gov/FileHandler.ashx?DocumentID=2597&inline=1>>.

Third, MM BIO-1b does not identify the size of the “no-construction buffer,” nor does it establish a mechanism for ensuring the buffer is configured to minimize the potential for direct mortality (e.g., vehicle strikes). For example, if the den is located in an interior portion of the site and the buffer does not extend to off-site habitat, the female badger would be forced to travel through the construction zone to reach off-site foraging habitat, thereby making the badger susceptible to direct mortality.

MM BIO-1b concludes with the statement that: “[d]ocumentation and recommendations of the completed focused badger survey shall be provided to the Director of Planning, Building and Code Enforcement or Director’s designee within 14 days of program completion.” This statement is confusing, but appears to suggest the Applicant would be allowed to submit the required documentation and recommendations after initiation of construction activities. To ensure efficacy of the mitigation, the Director of Planning, Building and Code Enforcement must review the required documentation and recommendations *before* initiation of construction activities.

MM BIO-2 (Nesting Birds)

MM BIO-2 states:

“Prior to any tree removal, or approval of any grading or demolition permits (whichever occurs first), the project applicant shall schedule demolition and construction activities to avoid the nesting season. The nesting season for most birds, including most raptors in the San Francisco Bay area, extends from February 1 through August 31 (inclusive).”

This measure is inconsistent with the construction schedule described in the IS/MND,⁷⁷ and therefore, it is incapable of implementation.

MM BIO-2 then states:

“If demolition and construction cannot be scheduled to occur between September 1 and January 31 (inclusive), pre-construction surveys for nesting birds shall be completed by a qualified ornithologist or biologist to ensure that no nests shall be disturbed during project implementation. This survey shall be completed no more than 14 days prior to the initiation of construction activities during the early part of the breeding season (February 1st through April 30th, inclusive) and no more than 30 days prior to the initiation of these activities during the late part of the breeding season (May 1st through August 31st, inclusive). During this survey, the qualified ornithologist/biologist shall inspect all trees and other possible nesting habitats immediately adjacent to the construction areas for nests.”

MM BIO-2 fails to establish standards for the: (a) nest searching techniques, (b) minimum level of effort (i.e., survey hours per unit area), and (c) qualifications of the biologist conducting the

⁷⁷ See IS/MND, p. 22.

survey. As explained below, the ability to successfully locate nests in the Project area is dependent on these three variables.

Although the Project site lacks trees, it provides nesting substrates for ground-nesting birds such as the grasshopper sparrow. Most ground-nesting birds, including the grasshopper sparrow, construct nests that are inconspicuous and thus hard to find.⁷⁸ As a result, successfully locating nests of ground-nesting birds requires special techniques.⁷⁹ Because MM BIO-2 does not require implementation of those techniques, it provides no assurances that the Project would avoid take of nesting birds.

Many biologists that conduct pre-construction surveys fail to devote the level of effort needed to locate all bird nests. Locating all nests within the 28.9-acre Project site may require a considerable level of effort. To ensure all bird nests that may be affected by the Project are located, the City must establish standards for the survey effort (e.g., minimum number of survey hours per unit area).

The success of any nest-searching method depends on the surveyor's knowledge of where birds nest, how nesting birds behave, and the best time of day to search for nests.⁸⁰ Attaining this knowledge requires training and experience.⁸¹ Because MM BIO-2 fails to establish standards for the "qualified biologist" that would conduct the nesting bird survey, it does not ensure the biologist would have the qualifications needed to successfully locate all nests within the Project area prior to construction.

Some bird species build a nest and initiate egg-laying in as little as 10 days.⁸² As a result, a nesting bird survey conducted up to 14 days prior to construction activities during the early part of the breeding season would be insufficient to avoid and minimize significant impacts to nesting birds. Allowing the nesting bird survey to be conducted up to 30 days prior to construction activities during the latter part of the breeding season (defined as May 1 through August 31 in MM BIO-2) would undoubtedly result in significant impacts to nesting birds because it fails to account for the fact that some species: (a) do not initiate nesting until after May 1; (b) will reinitiate nesting attempts later in the season if the first attempt fails; or (c) have two or more broods. For example, grasshopper sparrows in California generally do not begin nesting until

after May 1 and they typically have at least two broods annually.⁸³

The statement that “the qualified ornithologist/biologist shall inspect all trees and other possible nesting habitats immediately adjacent to the construction areas for nests” suggests surveys are not required in the actual construction areas. If this is correct, potentially significant impacts to bird nests would not be mitigated.

The Biological Resources Report concluded that the loss of habitat from the Project site would have a potentially significant impact on raptors and other protected avian species, including the grasshopper sparrow.⁸⁴ This conclusion is consistent with published scientific literature.⁸⁵ None of the mitigation measures incorporated into the IS/MND address the Project’s permanent impacts to avian habitat. As a result, the IS/MND’s conclusion that implementation of the proposed mitigation measures would reduce the Project’s impacts to less-than-significant levels⁸⁶ is inconsistent with the analysis in the Biological Resources Report.

MM BIO-3 (Burrowing Owl)

As discussed previously, the take avoidance surveys required under MM BIO-3a are not a valid substitute for “detection surveys,” which are essential to understanding a project’s impacts and formulating appropriate mitigation. Even if the surveys required under MM BIO-3a are effective in preventing direct impacts to burrowing owls, they are not designed to provide data on the ecological value of the Project site to burrowing owls. Impact significance cannot be determined when there are no data to analyze. As a result, the IS/MND’s determination that any potentially significant impacts to burrowing owls and their habitat would be less than significant with implementation of MM BIO-3 is not supported by evidence.

Burrowing owls exhibit high fidelity to breeding sites and even individual nest burrows.⁸⁷ Although data suggest most burrowing owls in Santa Clara Valley do not migrate, many owls appear to “wander” during the non-breeding season.⁸⁸ This is important because the timing of the surveys required under MM BIO-3a is based on the Applicant’s construction schedule, not on the biology of the species or the recommended timing for surveys to maximize detection of owls.⁸⁹ For example, the IS/MND acknowledges the possibility that burrowing owls nest at the Project site. However, if the Applicant elects to start construction activities during the fall or winter, the preconstruction surveys would also be conducted during the fall or winter, and there

would be no way of knowing whether the Project had eliminated a breeding site. This scenario would result in an extremely significant, unmitigated impact because there appear to be only four breeding sites remaining in the SCVHP expanded study area.

Habitat loss is the primary threat to burrowing owls in California.⁹⁰ However, contrary to CDFW mitigation guidelines,⁹¹ the IS/MND does not incorporate any mitigation for the Project's potentially significant impacts on burrowing owl habitat. As a result, potentially significant impacts to burrowing owl habitat remain significant. Moreover, due to the status of burrowing owls in Santa Clara County, and because the City does not have data on the ecological importance of the Project site to burrowing owls, the Project's impacts on burrowing owls are potentially significant and unavoidable.

This concludes my comments on the IS/MND.

Sincerely,

Scott Cashen, M.S.
Senior Biologist
