Appendix B: 865 Embedded Way Transportation Demand Management Plan

## Section 1.0 Introduction

---

The Initial Study/Mitigated Negative Declaration (IS/MND) for the 865 Embedded Way project was prepared in compliance with the requirements of the California Environmental Quality Act (CEQA). The 20-day local public circulation period for the IS/MND started December 21, 2023 and ended January 10, 2024. The Notice of Intent (NOI) for the adoption of the IS/MND was sent via email to applicable public agencies, public members who have requested notices on all CEQA documents, and public members interested in the project. The NOI was also sent to all those who have registered for electronic notifications of Planning document posting and news on the City's website. The NOI and Draft IS/MND was also submitted to the State Clearinghouse (SCH) at the commencement of the comment period. The following pages contain responses to comments submitted by agencies, organizations, and individuals during the IS/MND public review period. Copies of the comment letters are attached to this document in Appendix A.

Pursuant to CEQA Guidelines Section 15073.5, recirculation of the MND is required when the document must be "substantially revised" after public notice of its availability. A "substantial revision" is defined as:

- (1) A new, avoidable significant effect is identified and mitigation measures or project revisions must be added in order to reduce the effect to insignificance; or
- (2) The lead agency determines that the proposed mitigation measures or project revisions will not reduce potential effects to less than significance and new measures or revisions must be required.

CEQA does not require formal responses to comments on an IS/MND and the decision-making body shall adopt the proposed MND only if it finds on the basis of the whole record before it, that there is no substantial evidence that the project will have a significant effect on the environment and the MND reflects the lead agency's independent judgment and analysis [CEQA Guidelines Section 15074(b)].

Pursuant to CEQA Guidelines Section 15384, substantial evidence is defined as:

- (a) "Substantial evidence" as used in these guidelines means enough relevant information and reasonable inferences from this information that a fair argument can be made to support a conclusion, even though other conclusions might also be reached. Whether a fair argument can be made that the project may have a significant effect on the environment is to be determined by examining the whole record before the lead agency. Argument, speculation, unsubstantiated opinion or narrative, evidence which is clearly erroneous or inaccurate, or evidence of social or economic impacts which do not contribute to or are not caused by physical impacts on the environment does not constitute substantial evidence.
- (b) Substantial evidence shall include facts, reasonable assumptions predicated upon facts, and expert opinion supported by facts.

# Section 2.0 Responses to Comments Received on Draft IS/MND

---

Comments are organized under headings containing the source of the letter and its date. The specific comments from each of the letters and/or emails are presented, with each response to that specific comment directly following. Copies of the letters and emails received by the City of San José are included in their entirety, unless otherwise noted, in Appendix A of this document. Comments received on the Draft IS/MND are listed below.

## Regional and Local Agencies

### A. Santa Clara Valley Transportation Authority (dated January 10, 2024)

**Comment A.1:** VTA appreciates the opportunity to comment on the IS/MND for the 865 Embedded Way Industrial Project. VTA has reviewed the document and has the following comments:

#### Coyote Creek Trail Access

Coyote Creek Trail is adjacent to the project site and is identified as a future bicycle superhighway. These are high quality, uninterrupted, long-distance bikeways separated from motor vehicles that will allow people to travel quickly from city to city. The closest trail access is informally at the end of Embedded Way. VTA encourages the applicant to work with the City to formalize the access to Coyote Creek Trail with a trailhead and other amenities.

**Response A.1:** This comment recommends formalizing access to the Coyote Creek Trail at the terminus of Embedded Way with a trailhead and other amenities. As discussed in *Section 4.17 Transportation* of the IS/MND (refer to page 158), the trail runs parallel to Coyote Creek and provides both pedestrian and bicycle access to the project site. The closest trail access is informally provided at the west end of Embedded Way, approximately 900 feet from the project site. The trail borders the site on the west side, but there is a steep slope between the site and the trail that presently prevents direct access along that border. Typically, public improvements such as the trailhead connection could be implemented to reduce Vehicle Miles Traveled (VMT) by encouraging other modes of transportation. As described in *Section 4.17 Transportation* of the IS/MND, the project will be implementing Mitigation Measure TRAN-1 and Mitigation Measure TRAN-2 to reduce VMT impacts to less than significant levels, including construction of multi-modal improvements and development of a TDM plan. The comment identifies an additional potential measure the project could potentially implement to reduce VMT, but the measures included in the IS/MND are sufficient, and there is no nexus to require additional mitigation. Further, the comment does not identify a new significant impact, nor does it provide substantial evidence supporting a fair argument that formalizing access to the trail is necessary to reduce project impacts to a less than significant level. The comment does not address the adequacy of the IS/MND and, therefore, no further CEQA analysis is required. The comment is included in the record and will be considered by the decision makers prior to taking action on the project.

**Comment A.2:** Given the proximity to Coyote Creek Trail, it is likely employees will use the trail to bike to work and/or during their breaks. Currently, the proposed project will only provide 25 short-term bicycle racks. VTA recommends providing long-term bicycle parking (e.g. bike lockers, bike cage, bike room) in addition to the short-term bicycle racks. VTA's Bicycle Technical Guidelines provide guidance for estimating the amount and the design of bicycle parking facilities. For

industrial uses, VTA recommends long-term bike parking provided at a minimum of 1 space per 10,000 square feet or a goal of 1 space per 5,000 square feet.

**Response A.2:** This comment recommends the project provide long-term bicycle parking facilities. As described on page 164 of the IS/MND, the project would comply with the City's Bicycle Parking Standard, which requires a rate of one bicycle parking space per 5,000 square feet of floor area, by providing 25 bicycle parking spaces. The City's requirements do not differentiate between short-term and long-term spaces. The project, therefore, would provide adequate bicycle parking in accordance with City requirements. The Transportation Analysis (which is included as Appendix H to the IS/MND) completed for the project, including the VMT analysis, reflected the proposed amount of bicycle parking, and the project includes adequate mitigation to reduce VMT below the applicable thresholds. Therefore additional mitigation in the form of more long-term bicycle parking is not required. The comment does not identify a new significant impact, nor does it provide substantial evidence supporting a fair argument that long-term bicycle parking is necessary to reduce project impacts to a less than significant level. The comment does not address the adequacy of the IS/MND and, therefore, no further CEQA analysis is required. The comment is included in the record and will be considered by the decision makers prior to taking action on the project.

**Comment A.3: TDM Program**

One proposed transportation mitigation measure is a Commute Trip Reduction Marketing/Education program to promote the use of transit, shared rides, and active transportation. VTA supports this marketing and education program but wants to note that current transit service options are not within walking distance of the project site. Resources are better used to promote shared rides and active transportation.

Thank you again for the opportunity to review this project. If you have any questions, please do not hesitate to contact me at (408) 321-5804 or [larissa.sanderfer@vta.org](mailto:larissa.sanderfer@vta.org).

**Response A.3:** This comment recommends that the project's Transportation Demand Management (TDM) plan focus on promoting shared rides and active transportation instead of transit use due to the lack of transit facilities within walking distance of the project site. As described on page 158 of the IS/MND, the nearest bus stop is located west of the intersection of Silver Creek Valley Road and Hellyer Avenue, about 0.9 mile from the project site. Additionally, the Blossom Hill Caltrain Station is located at the Monterey Road/Ford Road intersection roughly 1.15 miles southwest of the project site. As described on page 162 of the IS/MND, the project's TDM Plan shall include annual monitoring to ensure that the project's VMT does not exceed relevant thresholds. The comment does not identify a new significant impact, nor does it provide substantial evidence supporting a fair argument that revisions to the identified mitigation measure are necessary to reduce project impacts to a less than significant level.

**B. Muwekma Ohlone Indian Tribe (dated January 4, 2024)**

**Comment B.1:** Thank you for contacting the Muwekma Ohlone Tribal Administration with regards to the proposed construction of a one-story 121,400 square foot industrial/manufacturing warehouse on a vacant 10.17-acre project site located at 865 Embedded Way in South San Jose (file #H22-022, ER22-113) [Assessor's Parcel No.: 679-01-020].

Based upon the information that was provided in your letter, stating that the

“City has performed an environmental review of the project. The environmental review examines the nature and extent of any adverse effects on the environment that could occur if the project is approved and implemented. Based on the review, the City has prepared a Draft Mitigated Negative Declaration (MND) for this project. An MND is a statement by the City that the project will not have a significant effect on the environment because the project will include mitigation measures that will reduce identified project impacts to a less than significant level.”

**Response B.1:** This comment is an introductory paragraph summarizing the City's CEQA review process and determination and does not raise any issues regarding the adequacy of the IS/MND; therefore, no further response or additional CEQA analysis is required.

**Comment B.2:** Based upon our Tribe's site sensitivity maps, it appears that the proposed project is located approximately [REDACTED] of one of our Tribe's ancestral heritage mortuary sites [REDACTED] as well as [REDACTED] of two major ancestral burial sites [REDACTED] which yielded over 100 ancestral human remains (as some examples of nearby sites adjacent to Coyote Creek). Furthermore, the project is located approximately [REDACTED] of [REDACTED] which when we worked on that project in 1983, the lower cultural components dated 9300 -9900 BP (before present), therefore, these sites are of great significance under CEQA and other Environmental laws.

**Response B.2:** This comment provides information regarding the locations of known cultural resources in the project vicinity (but not on the subject site) considered by the Tribe to be associated with their ancestral heritage. Text describing the locations of cultural resources has been redacted to ensure confidential information is protected. The comment does not raise any issues regarding the adequacy of the IS/MND; therefore, no further response or additional CEQA analysis is required.

**Comment B.3:** As a result, given the proposed project's proximity to Coyote Creek, the Muwekma Ohlone tribal leadership is concerned that this demolition project which may indeed encounter unreported Tribal Cultural Resources, and therefore, we are formally recommending that the demolition, subsurface excavations, and related construction activities within subject project area be monitored by qualified archaeologists and a Muwekma Ohlone monitor during various stages of demolition, tree removal, and subsurface utilities excavations.

**Response B.3:** As described on page 72 of the IS/MND, the project site is considered to have high sensitivity for prehistoric and historic archaeological resources, which includes tribal cultural resources. Impact CUL-1 identifies that project construction activities could result in the accidental disturbance and/or destruction of undocumented archaeological resources due to the site's high sensitivity based on its proximity to Coyote Creek and known archaeological sites in the project vicinity; however, no resources are known to exist on the subject property itself. The IS/MND identified MM CUL-1.1 through MM CUL-1.8 to reduce impacts to cultural resources and tribal cultural resources. MM CUL-1.3 specifically requires that a Native American tribal representative registered with the Native American Heritage Commission (NAHC) for the City of San José, and that is traditionally and culturally affiliated with the geographic area, would be involved in construction monitoring. The project applicant will be required to hire a qualified archaeologist and an affiliated Native American tribe to monitor construction prior to ground disturbing construction activities. The applicant will select a tribal monitor prior to construction activity as noted in MM CUL-1.3. Accordingly, no revision to the IS/MND is required.

**Comment B.4:** The Tribe's Cultural Resources arm is available to provide monitors and willingness to work along side with any Cultural Resources Management (CRM) firms that will be hired by the City or applicant to monitor this project.

**Response B.4:** This comment expresses the Muwekma Ohlone Indian Tribe's availability to monitor the project. Pursuant to mitigation measure MM CUL-1.3 all ground-disturbing activities (e.g., grading and excavation) shall be completed under the observation of a qualified archaeologist and a qualified Native American monitor, registered with the Native American Heritage Commission (NAHC) for the City of San José and that is traditionally and culturally affiliated with the geographic area. The project applicant would be required to hire a Native American monitor to observe ground-disturbing activities. The comment does not raise any issues regarding the adequacy of the IS/MND; therefore, no further response or additional CEQA analysis is required.

**Comment B.5:** We make these recommendations based upon the recovery of several hundred ancestral remains recovered from [REDACTED] which were discovered after the demolition of the old cannery at that location. Similar Mitigated Negative Declaration (MND) determinations by the City of San Jose Planning Department for the [REDACTED] [REDACTED] also stated that the project will not have a significant effect on the tribal and cultural resources, even though our Tribe was involved in the removal of over 50 ancestral human remains at these two adjacent locations.

**Response B.5:** This comment describes other projects in San José where previously unrecorded cultural resources were discovered during construction activities. An

Addendum to the Downtown Strategy 2040 EIR was prepared for the 200 Park Project. Measures to reduce impacts to tribal cultural resources were developed during preparation of the Downtown Strategy 2040 EIR in consultation a representative of the Ohlone Indian Tribe. A Supplemental EIR to the original Downtown Strategy 2000 EIR and subsequent Addendums to the adopted Supplemental EIR and Downtown Strategy 2040 EIR were prepared for the 180 Park Project (also known at the Museum Place/Park Habitat Project), which included mitigation measures to reduce impacts to cultural resources (including tribal cultural resources).

Text describing the locations of cultural resources has been redacted to ensure confidential information is protected. As described in Response B.3, the IS/MND acknowledged that project construction activities could result in the accidental disturbance and/or destruction of undocumented archaeological resources, if present, and identified mitigation measures MM CUL-1.1 through MM CUL-1.8 to reduce impacts to a less than significant level. These measures include development of a Cultural Resources Treatment Plan prior to issuance of grading permits, preliminary investigation, a requirement that Native American monitors that are traditionally and culturally affiliated with the geographic area be present on-site during ground disturbing activities, and cultural sensitivity training for construction workers. However, nothing in this comment provides substantial evidence of the presence of tribal cultural resources on the subject project site.

**Comment B.6:** We are including a copy of one of our archaeological projects conducted by our Tribe at [REDACTED] as an example of our previous CRM work.

Thank you once again for contacting our Tribe and informing us of any and all City of San Jose construction projects as it relates to potential adverse impacts to our ancestral heritage sites/Tribal Cultural Resources as specified under AB 52.

Should you have any questions, please feel free to contact us.

**Response B.6:** As described in the comment, the Tribe's comment letter included an attachment with information regarding their experience providing cultural resources monitoring services. Neither this comment nor the supplemental information raise any issues regarding the adequacy of the IS/MND, and the applicant will select a tribal monitor as prescribed by MM CUL-1.3. Therefore, no further response or additional CEQA analysis is required. Text describing the location of cultural resources has been redacted to ensure confidential information is protected. The full unredacted comment letter and supplemental information is on file at the City of San José Department of Planning, Building & Code Enforcement and is available upon request with appropriate credentials.

# Organizations, Businesses, and Individuals

## C. Pacific Gas and Electric Company (dated January 5, 2024)

**Comment C.1:** Thank you for giving us the opportunity to review the subject plans. The proposed 865 Embedded Way Industrial Project is within the same vicinity of PG&E's existing 3" and 1 ¼" high pressure gas distribution facilities that impact this property.

The proposed 865 Embedded Way Industrial Project will require the relocation of existing PG&E gas service facilities. The applicant must contact the below resources to apply for the relocation of any existing PG&E gas services that exist on the subject parcels.

Please contact the Building and Renovation Center (BRSC) for facility map requests by calling 1-877-743-7782 and PG&E's Service Planning department at [www.pge.com/cco](http://www.pge.com/cco) for any modification or relocation requests, or for any additional services you may require.

As a reminder, before any digging or excavation occurs, please contact Underground Service Alert (USA) by dialing 811 a minimum of 2 working days prior to commencing any work. This free and independent service will ensure that all existing underground utilities are identified and marked on-site.

If you have any questions regarding our response, please contact me at [Brian.Callaghan@pge.com](mailto:Brian.Callaghan@pge.com).

**Response C.1:** The comment states that the project would require the relocation of existing PG&E gas service facilities. As described in *Section 4.6 Energy* of the IS/MND, PG&E is the electricity and natural gas provider for the project site. While the relocation of the two natural gas pipelines identified in the comment were not explicitly discussed in the Initial Study, as at the time of preparation of the IS/MND it was not understood that any gas line relocation would be necessary. Their relocation, if ultimately confirmed to be necessary, would not result in any new or more severe impacts. Relocation of the pipelines would occur within the anticipated construction period of the overall project utilizing construction equipment already on site for other project construction activities. The final relocation area has not yet been determined because it requires further coordination with PG&E. However, the potential locations that would be considered are all within the proposed development footprint of the project, meaning the area of site disturbance would not increase. A potential relocation spot would be within the southern drive aisle of the project site. As a result, the relocation of pipelines would not result in impacts different than those associated with the overall construction of the project, as the timeframe for construction activity and the location of site disturbance would remain unchanged. In the event PG&E determines that the pipelines must be relocated to an area outside the proposed construction footprint, the applicant would be required to amend their Site Development Permit with the City, as all site

disturbance must conform to the approved Site Development Permit plans, and the City would conduct additional environmental review prior to issuance of any permit amendment allowing for the pipeline relocation in a new area(s) of disturbance. Text in *Section 4.19.1.2 Existing Conditions*, and *Section 4.19.2 Impact Discussion* under impact checklist question a), has been revised to provide details regarding the relocation of PG&E natural gas pipelines. Refer to Section 3.0 Revisions to the Text of the Initial Study, below.

**D. Mitchell M. Tsai Law Firm (dated January 10, 2024)**

**Comment D.1:** On behalf of Carpenters Local Union 405 (“Local 405”) this office is submitting these comments on the Initial Study/Mitigated Negative Declaration (“IS/MND”) for the City of San Jose’s (“City”) 865 Embedded Way Industrial Project (“Project”).

The Project proposes a Site Development Permit (File No. H22-022) to allow the construction of a one-story, 121,400-square-foot industrial/manufacturing warehouse on a vacant 10.17-acre project site located at 865 Embedded Way in San Jose, California 95138 (APN 679-01-020) (“Site”). The Project also includes a connection to an existing 26-foot-wide drive aisle that extends from the eastern Embedded Way driveway through the adjacent eastern industrial property at 875 Embedded Way and currently terminates at the southeastern boundary of the Site. A total of 300 parking spaces would be provided in a surface parking lot surrounding the proposed building. The Project requires the removal of 11 trees on-site, two of which are ordinance-size.

Local 405 represents thousands of union carpenters in San Jose and has a strong interest in well-ordered land use planning and in addressing the environmental impacts of development projects. Individual members of Local 405 live, work, and recreate in the City and surrounding communities and would be directly affected by the Project’s environmental impacts.

Local 405 expressly reserves the right to supplement these comments at or prior to hearings on the Project, and at any later hearing or proceeding related to the Project. Gov. Code, § 65009, subd. (b); Pub. Res. Code, § 21177, subd. (a); see *Bakersfield Citizens for Local Control v. Bakersfield* (2004) 124 Cal.App.4th 1184, 1199-1203; see also *Galante Vineyards v. Monterey Water Dist.* (1997) 60 Cal.App.4th 1109, 1121.

Local 405 incorporates by reference all comments related to the Project or its California Environmental Quality Act (“CEQA”) review, including the IS/MND. See *Citizens for Clean Energy v. City of Woodland* (2014) 225 Cal.App.4th 173, 191 (finding that any party who has objected to the project’s environmental documentation may assert any issue timely raised by other parties).

Moreover, Local 405 requests that the City provide notice for any and all notices referring or related to the Project issued under CEQA (Pub. Res. Code, § 21000 et seq.) and the California Planning and Zoning Law (“Planning and Zoning Law”) (Gov. Code, §§ 65000-65010). California Public Resources Code sections 21092.2 and 21167(f) and California Government Code section 65092 require agencies to mail such notices to any person who has filed a written request for them with the clerk of the agency’s governing body.

**Response D.1:** This comment is an introductory paragraph. The commenter requests that any and all notices be provided, and does not raise any CEQA issues nor address the adequacy of the IS/MND; therefore, no further response or additional CEQA analysis is required. The City will provide the requested notices as they are issued.

**Comment D.2:** I. The City Should Require the Use of A Local Workforce to Benefit The Community's Economic Development and Environment.

The City should require that the Project be built by contractors who participate in a Joint Labor-Management Apprenticeship Program approved by the State of California and make a commitment to hiring a local workforce. Community benefits such as local hire can also be helpful to reduce environmental impacts and improve the positive economic impact of the Project. Local hire provisions requiring that a certain percentage of workers reside within 10 miles or less of the Site can reduce the length of vendor trips, reduce greenhouse gas (“GHG”) emissions, and provide localized economic benefits. As environmental consultants Matt Hagemann and Paul E. Rosenfeld note:

[A]ny local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

March 8, 2021, SWAPE Letter to Mitchell M. Tsai re Local Hire Requirements and Considerations for Greenhouse Gas Modeling. Workforce requirements promote the development of skilled trades that yield sustainable economic development. As the California Workforce Development Board and the University of California, Berkeley Center for Labor Research and Education concluded:

[L]abor should be considered an investment rather than a cost—and investments in growing, diversifying, and upskilling California’s workforce can positively affect returns on climate mitigation efforts. In other words, well-trained workers are key to delivering emissions reductions and moving California closer to its climate targets.<sup>1</sup>

Furthermore, workforce policies have significant environmental benefits given that they improve an area’s jobs-housing balance, decreasing the amount and length of job commutes and the associated greenhouse gas (GHG) emissions. In fact, on May 7, 2021, the South Coast Air Quality Management District found that that the “[u]se of a local state-certified apprenticeship program” can result in air pollutant reductions.<sup>2</sup>

Locating jobs closer to residential areas can have significant environmental benefits. As the California Planning Roundtable noted in 2008:

---

<sup>1</sup> California Workforce Development Board (2020) Putting California on the High Road: A Jobs and Climate Action Plan for 2030 at p. ii, available at <https://laborcenter.berkeley.edu/wp-content/uploads/2020/09/Putting-California-on-the-High-Road.pdf>.

<sup>2</sup> South Coast Air Quality Management District (May 7, 2021) Certify Final Environmental Assessment and Adopt Proposed Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions Program, and Proposed Rule 316 – Fees for Rule 2305, Submit Rule 2305 for Inclusion Into the SIP, and Approve Supporting Budget Actions, available at <http://www.aqmd.gov/docs/default-source/Agendas/Governing-Board/2021/2021-May7-027.pdf?sfvrsn=10>.

People who live and work in the same jurisdiction would be more likely to take transit, walk, or bicycle to work than residents of less balanced communities and their vehicle trips would be shorter. Benefits would include potential reductions in both vehicle miles traveled and vehicle hours traveled.<sup>3</sup>

Moreover, local hire mandates and skill-training are critical facets of a strategy to reduce vehicle miles traveled (“VMT”). As planning experts Robert Cervero and Michael Duncan have noted, simply placing jobs near housing stock is insufficient to achieve VMT reductions given that the skill requirements of available local jobs must match those held by local residents.<sup>4</sup> Some municipalities have even tied local hire and other workforce policies to local development permits to address transportation issues. Cervero and Duncan note that:

In nearly built-out Berkeley, CA, the approach to balancing jobs and housing is to create local jobs rather than to develop new housing. The city’s First Source program encourages businesses to hire local residents, especially for entry- and intermediate-level jobs, and sponsors vocational training to ensure residents are employment-ready. While the program is voluntary, some 300 businesses have used it to date, placing more than 3,000 city residents in local jobs since it was launched in 1986. When needed, these carrots are matched by sticks, since the city is not shy about negotiating corporate participation in First Source as a condition of approval for development permits.

Recently, the State of California verified its commitment towards workforce development through the Affordable Housing and High Road Jobs Act of 2022, otherwise known as Assembly Bill No. 2011 (“AB2011”). AB2011 amended the Planning and Zoning Law to allow ministerial, by-right approval for projects being built alongside commercial corridors that meet affordability and labor requirements.

The City should consider utilizing local workforce policies and requirements to benefit the local area economically and to mitigate GHG emissions, improve air quality, and reduce transportation impacts.

**Response D.2:** This comment recommends the use of local workforce for construction of the project. The City does not require nor has any programs that require projects to be constructed utilizing only local workforce. The decision to hire contractors will be made by the applicant. There is no requirement under CEQA to attempt to identify the location of the workforce that would construct a project. The IS/MND’s evaluation of the project’s construction activity has been based on modeling and methodologies developed by and recommended by regional and state

---

<sup>3</sup> California Planning Roundtable (2008) Deconstructing Jobs-Housing Balance at p. 6, available at <https://cproundtable.org/static/media/uploads/publications/cpr-jobshousing.pdf>.

<sup>4</sup> Cervero, Robert and Duncan, Michael (2006) Which Reduces Vehicle Travel More: Jobs-Housing Balance or Retail-Housing Mixing? Journal of the American Planning Association 72 (4), 475-490, 482, available at <http://reconnectingamerica.org/assets/Uploads/UTCT-825.pdf>.

agencies. The IS/MND has accurately forecasted project impacts based on available information, has identified mitigation for any impacts forecasted to be significant, and does not speculate about where future construction workers might reside. The decision to hire particular contractors is the project applicant's discretion, and not within the Lead Agency's. The comment is included in the record and will be considered by the decisions makers prior to taking action on the project. This comment does not address the adequacy of the IS/MND. No further response or additional CEQA analysis is required.

**Comment D.3:** II. The Project would be Approved In Violation of the California Environmental Quality Act.

A. Background Concerning the California Environmental Quality Act.

The California Environmental Quality Act is a California statute designed to inform decision-makers and the public about the potential significant environmental effects of a project. 14 California Code of Regulations ("CEQA Guidelines"), § 15002, subd. (a)(1).<sup>5</sup> At its core, its purpose is to "inform the public and its responsible officials of the environmental consequences of their decisions before they are made." *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 564.

1. Background Concerning Environmental Impact Reports.

CEQA directs public agencies to avoid or reduce environmental damage, when possible, by requiring alternatives or mitigation measures. CEQA Guidelines, § 15002, subds. (a)(2)-(3); see also *Berkeley Keep Jets Over the Bay Committee v. Board of Port Comes* (2001) 91 Cal.App.4th 1344, 1354; *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553; *Laurel Heights Improvement Assn.*, 47 Cal.3d at p. 400. The EIR serves to provide public agencies and the public in general with information about the effect that a proposed project is likely to have on the environment and to "identify ways that environmental damage can be avoided or significantly reduced." CEQA Guidelines, § 15002, subd. (a)(2). If the project has a significant effect on the environment, the agency may approve the project only upon finding that it has "eliminated or substantially lessened all significant effects on the environment where feasible" and that any unavoidable significant effects on the environment are "acceptable due to overriding concerns" specified in Public Resources Code section 21081. See CEQA Guidelines, § 15092, subds. (b)(2)(A)-(B).

While the courts review an EIR using an 'abuse of discretion' standard, the reviewing court is not to uncritically rely on every study or analysis presented by a project proponent in support of its position. *Berkeley Jets*, 91 Cal.App.4th at p. 1355 (quoting *Laurel Heights Improvement Assn.*, 47 Cal.3d at pp. 391, 409 fn. 12) (internal quotations omitted). A clearly inadequate or unsupported study is entitled to no judicial deference. *Id.* Drawing this line and determining whether the EIR

---

<sup>5</sup> The CEQA Guidelines, codified in Title 14 of the California Code of Regulations, section 15000 et seq., are regulatory guidelines promulgated by the state Natural Resources Agency for the implementation of CEQA. Cal. Pub. Res. Code, § 21083. The CEQA Guidelines are given "great weight in interpreting CEQA except when . . . clearly unauthorized or erroneous." *Center for Biological Diversity v. Dept. of Fish & Wildlife* (2015) 62 Cal.4th 204, 217.

complies with CEQA's information disclosure requirements presents a question of law subject to independent review by the courts. *Sierra Club v. County of Fresno* (2018) 6 Cal.5th 502, 515; *Madera Oversight Coalition, Inc. v. County of Madera* (2011) 199 Cal.App.4th 48, 102, 131. As the court stated in *Berkeley Jets*, prejudicial abuse of discretion occurs if the failure to include relevant information precludes informed decision-making and informed public participation, thereby thwarting the statutory goals of the EIR process. 91 Cal.App.4th at p. 1355 (internal quotations omitted).

The preparation and circulation of an EIR is more than a set of technical hurdles for agencies and developers to overcome. *Communities for a Better Environment v. Richmond* (2010) 184 Cal.App.4th 70, 80 (quoting *Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova* (2007) 40 Cal.4th 412, 449-450). The EIR's function is to ensure that government officials who decide to build or approve a project do so with a full understanding of the environmental consequences and, equally important, that the public is assured those consequences have been considered. *Id.* For the EIR to serve these goals it must present information so that the foreseeable impacts of pursuing the project can be understood and weighed, and the public must be given an adequate opportunity to comment on that presentation before the decision to go forward is made. *Id.*

A strong presumption in favor of requiring preparation of an EIR is built into CEQA. This presumption is reflected in what is known as the "fair argument" standard under which an EIR must be prepared whenever substantial evidence in the record supports a fair argument that a project may have a significant effect on the environment. *Quail Botanical Gardens Found., Inc. v. City of Encinitas* (1994) 29 Cal.App.4th 1597, 1602; *Friends of "B" St. v. City of Hayward* (1980) 106 Cal.3d 988, 1002.

The fair argument test stems from the statutory mandate that an EIR be prepared for any project that "may have a significant effect on the environment." PRC, § 21151; see *No Oil, Inc. v. City of Los Angeles* (1974) 13 Cal.App.3d 68, 75; accord *Jensen v. City of Santa Rosa* (2018) 23 Cal.App.5th 877, 884. Under this test, if a proposed project is not exempt and may cause a significant effect on the environment, the lead agency must prepare an EIR. PRC, §§ 21100 (a), 21151; CEQA Guidelines, § 15064 (a)(1), (f)(1). An EIR may be dispensed with only if the lead agency finds no substantial evidence in the initial study or elsewhere in the record that the project may have a significant effect on the environment. *Parker Shattuck Neighbors v. Berkeley City Council* (2013) 222 Cal.App.4th 768, 785. In such a situation, the agency must adopt a negative declaration. PRC, § 21080, subd. (c)(1); CEQA Guidelines, §§ 15063 (b)(2), 15064(f)(3).

"Significant effect upon the environment" is defined as "a substantial or potentially substantial adverse change in the environment." PRC, § 21068; CEQA Guidelines, § 15382. A project may have a significant effect on the environment if there is a reasonable probability that it will result in a significant impact. *No Oil, Inc.*, 13 Cal.3d at p. 83 fn. 16; see *Sundstrom v. County of Mendocino* (1988) 202 Cal.App.3d 296, 309. If any aspect of the project may result in a significant impact on the environment, an EIR must be prepared even if the overall effect of the project is beneficial. CEQA

Guidelines, § 15063(b)(1); see County Sanitation Dist. No. 2 v. County of Kern (2005) 127 Cal.App.4th 1544, 1580.

This standard sets a “low threshold” for preparation of an EIR. Consolidated Irrigation Dist. v. City of Selma (2012) 204 Cal.App.4th 187, 207; Nelson v. County of Kern (2010) 190 Cal.App.4th 252; Pocket Protectors v. City of Sacramento (2004) 124 Cal.App.4th 903, 928; Bowman v. City of Berkeley (2004) 122 Cal.App.4th 572, 580; Citizen Action to Serve All Students v. Thornley (1990) 222 Cal.App.3d 748, 754; Sundstrom, 202 Cal.App.3d at p. 310. If substantial evidence in the record supports a fair argument that the project may have a significant environmental effect, the lead agency must prepare an EIR even if other substantial evidence before it indicates the project will have no significant effect. See Jensen, 23 Cal.App.5th at p. 886; Clews Land & Livestock v. City of San Diego (2017) 19 Cal.App.5th 161, 183; Stanislaus Audubon Society, Inc. v. County of Stanislaus (1995) 33 Cal.App.4th 144, 150; Brentwood Assn. for No Drilling, Inc. v. City of Los Angeles (1982) 134 Cal.App.3d 491; Friends of “B” St., 106 Cal.App.3d 988; CEQA Guidelines, § 15064(f)(1).

**Response D.3:** This comment provides background on CEQA and defines the function of an environmental impact report along with the fair argument standard. This comment is included in the record. This comment does not make any specific comment about the subject project and the IS/MND’s evaluation of the project, nor address the adequacy of the IS/MND. No further response or additional CEQA analysis is required.

**Comment D.4:** 2. Background Concerning Initial Studies, Negative Declarations and Mitigated Negative Declarations.

CEQA and CEQA Guidelines are strict and unambiguous about when an MND may be used. A public agency must prepare an EIR whenever substantial evidence supports a “fair argument” that a proposed project “may have a significant effect on the environment.” Pub. Res. Code, §§ 21100, 21151; CEQA Guidelines, §§ 15002, subds. (f)(1)-(2), 15063; No Oil, Inc., 13 Cal.3d at p. 75; Communities for a Better Environment v. California Resources Agency (2002) 103 Cal.App.4th 98, 111-112.

Essentially, should a lead agency be presented with a fair argument that a project may have a significant effect on the environment, the lead agency shall prepare an EIR even though it may also be presented with other substantial evidence that the project will not have a significant effect. CEQA Guidelines, §§ 15064, subds. (f)(1)-(2); see No Oil Inc., supra, 13 Cal.3d at p. 75 (internal citations and quotations omitted). Substantial evidence includes “enough relevant information and reasonable inferences from this information that a fair argument can be made to support a conclusion, even though other conclusions might also be reached.” CEQA Guidelines, § 15384(a)

The fair argument standard is a “low threshold” test for requiring the preparation of an EIR. No Oil Inc., supra, 13 Cal.3d at p. 84; County Sanitation Dist. No. 2 of Los Angeles County v. County of Kern (2005) 127 Cal.App.4th 1544, 1579. It “requires the preparation of an EIR where there is substantial evidence that any aspect of the project, either individually or cumulatively, may cause a significant

effect on the environment, regardless of whether the overall effect of the project is adverse or beneficial[.]” County Sanitation, *supra*, 127 Cal.App.4th at p. 1580 (quoting CEQA Guidelines, § 15063(b)(1)). A lead agency may adopt an MND only if “there is no substantial evidence that the project will have a significant effect on the environment.” CEQA Guidelines, § 15074(b).

Evidence supporting a fair argument of a significant environmental impact triggers preparation of an EIR regardless of whether the record contains contrary evidence. *League for Protection of Oakland’s Architectural and Historical Resources v. City of Oakland* (1997) 52 Cal.App.4th 896, 904-905. “Where the question is the sufficiency of the evidence to support a fair argument, deference to the agency’s determination is not appropriate[.]” *County Sanitation*, 127 Cal.App.4th at 1579 (quoting *Sierra Club v. County of Sonoma* (1992) 6 Cal.App.4th 1307, 1317-1318).

Further, it is the duty of the lead agency, not the public, to conduct the proper environmental studies. “The agency should not be allowed to hide behind its own failure to gather relevant data.” *Sundstrom*, 202 Cal.App.3d at p. 311. “Deficiencies in the record may actually enlarge the scope of fair argument by lending a logical plausibility to a wider range of inferences.” *Id.*; see also *Gentry v. City of Murrieta* (1995) 36 Cal.App.4th 1359, 1382 (lack of study enlarges the scope of the fair argument which may be made based on the limited facts in the record).

Thus, refusal to complete recommended studies lowers the already low threshold to establish a fair argument. The court may not exercise its independent judgment on the omitted material by determining whether the ultimate decision of the lead agency would have been affected had the law been followed. *Environmental Protection Information Center v. Cal. Dept. of Forestry* (2008) 44 Cal.4th 459, 486 (internal citations and quotations omitted). The remedy for this deficiency would be for the trial court to issue a writ of mandate. *Id.*

Both the review for failure to follow CEQA’s procedures and the fair argument test are questions of law, thus, the *de novo* standard of review applies. *Vineyard Area Citizens for Responsible Growth v. City of Rancho Cordova* (2007) 40 Cal.4th 412, 435. “Whether the agency’s record contains substantial evidence that would support a fair argument that the project may have a significant effect on the environment is treated as a question of law. *Consolidated Irrigation Dist.*, 204 Cal.App.4th at p. 207; *Kostka and Zischke, Practice Under the Environmental Quality Act* (2017, 2d ed.) at § 6.76.

In an MND context, courts give no deference to the agency. Additionally, the agency or the court should not weigh expert testimony or decide on the credibility of such evidence—this is one of the EIR’s functions. As stated in *Pocket Protectors v. City of Sacramento* (2004):

Unlike the situation where an EIR has been prepared, neither the lead agency nor a court may “weigh” conflicting substantial evidence to determine whether an EIR must be prepared in the first instance. Guidelines section 15064, subdivision (f)(1) provides in pertinent part: if a lead agency is presented with a fair argument that a project may have a significant effect on the environment, the lead agency shall prepare an EIR even though it may also be presented with other substantial evidence that the project will not have a

significant effect. Thus, as Claremont itself recognized, [c]onsideration is not to be given contrary evidence supporting the preparation of a negative declaration.

124 Cal.App.4th 903, 935 (internal citations and quotations omitted).

In cases where it is not clear whether there is substantial evidence of significant environmental impacts, CEQA requires erring on the side of a “preference for resolving doubts in favor of environmental review.” *Mejia v. City of Los Angeles* (2005) 130 Cal.App.4th 322, 332. “The foremost principle under CEQA is that the Legislature intended the act to be interpreted in such manner as to afford the fullest possible protection to the environment within the reasonable scope of the statutory language. *Friends of Mammoth v. Board of Supervisors* (1972) 8 Cal.3d 247, 259.

**Response D.4:** This comment provides background on Initial Studies, Negative Declarations and Mitigated Negative Declarations, and the requirement of lead agencies to prepare an EIR whenever the record includes substantial evidence in support of a fair argument that the project, after considering feasible mitigation measures, would have a significant effect. This comment is included in the record. This comment does not make any specific comment about the subject project and the IS/MND’s evaluation of the project, nor address the adequacy of the IS/MND. No further response or additional CEQA analysis is required.

**Comment D.5:** As explained below, the IS/MND fails to make certain essential findings. Further, for a number of findings that the IS/MND does make, it fails to support such findings with sufficient analysis and substantial evidence, or it fails to incorporate adequate mitigation measures. Therefore, there is a fair argument that the Project will have a significant effect on the environment, triggering the “low threshold” standard for preparation of an EIR.

**Response D.5:** The City of San José prepared the IS/MND for the referenced project in compliance with the requirements of CEQA and the CEQA Guidelines [Guidelines Section 15070, 15071, 15073 and Public Resource Code Section 21083]. As discussed in the responses to specific comments on the IS/MND below, the comments raised in this letter do not identify any new or more significant impacts, or mitigation measures considerably different than identified in the IS/MND. As discussed more specifically below in multiple responses, the assumptions and conclusions made in the IS/MND are supported by substantial evidence, and the assertions presented in this comment letter do not provide substantial evidence (pursuant with CEQA Guidelines Section 15384) supporting a fair argument that the project would result in a significant environmental impact.

**Comment D.6:** B. There Is a Fair Argument that the Project May Have a Significant Traffic Impact.

The very nature of the Project—a 121,400-square-foot building with 300 parking spaces on roughly 10 acres of land—indicates that it may have significant and severe traffic impacts, thus requiring the preparation of an EIR. This is further supported by the fact that the Project will generate an

estimated 1,350 net daily trips per the Institute of Transportation Engineers (“ITE”) Trip Generation Manual, 11th Edition (2021). IS/MND, pp. 163-164.<sup>6</sup>

**Response D.6:** Based on the responses below, the comments related to traffic impacts do not present new information that has not been previously analyzed in the IS/MND nor does it provide substantial evidence supporting a fair argument that the project would result in significant unavoidable impacts requiring preparation of an EIR. There is no specific requirement in CEQA that establishes that a project above a certain size, or that generates a certain number of daily vehicle trips, is per se a project that would result in significant un-mitigatable impacts. Rather, a project’s size and trip generation are used to evaluate how much of an impact the project would have to certain environmental factors, such as air pollution, roadway noise, GHG emissions, gasoline consumption, and vehicle miles traveled (VMT). For each of these topics, there are applicable thresholds of significance that have been developed, either by the City as lead agency or by other agencies with expertise in that subject area.

For instance, as discussed in IS/MND *Section 4.3 Air Quality*, air pollution thresholds have been developed by the Bay Area Air Quality Management District (BAAQMD), both for construction activity and for long-term operation of the proposed project. Taking into account the project’s size and intended use, the Air Quality and Greenhouse Gas Assessment (refer to Appendix A) prepared for the project documents that project construction and operational air pollution would be below applicable BAAQMD thresholds. Nothing in the comment provides any substantial evidence that the project would result in significant air quality impacts, and the IS/MND’s conclusions are clearly based on substantial evidence provided by the Air Quality and Greenhouse Gas Assessment prepared in conformance with the BAAQMD Guidelines.

Similarly, other sections of the IS/MND (e.g., Energy, GHG, Noise, Transportation) rely on applicable thresholds, and based on technical studies prepared for the project, to document the project’s impacts would remain below applicable thresholds. As with air quality, the comment provides no substantial evidence with regard to these other environmental topics, other than citing the size of the project, which is not substantial evidence. The comment only states what the project is and expresses an unsupported opinion that a project of that size must be large enough to produce significant impacts that are un-mitigatable, and therefore, an EIR is warranted. However, this opinion lacks any substantial evidence.

The commenter also incorrectly states that the project would have 1,350 net daily trips. The project would generate 1,350 total daily trips and 1,262 net daily trips,

---

<sup>6</sup> The IS/MND contends that, after “all applicable trip reductions and credits,” the Project would generate a “net new total of 1,269 additional daily trips.” IS/MND, p. 164.

after trip reductions, as shown in Table 5 of the Transportation Analysis, which is included as Appendix H to the IS/MND. The IS/MND incorrectly stated there would be 1,269 net daily trips as shown in Table 4.17-4 on page 165. In Section 3.0 Draft IS/MND Text Revisions, the number of daily trips has been corrected. The text revisions do not affect the analysis of the IS/MND since the number of daily trips reported in the IS/MND was higher than the corrected value by seven daily trips.

Furthermore, for evaluation of transportation impacts, with passage of, lead agencies are to employ VMT as the metric since the passage of Senate Bill (SB) 743. San Jose's adopted VMT Policy 5-1 includes thresholds based on the average VMT per employee. These thresholds were applied in the Transportation Analysis (refer to Appendix H of the IS/MND) prepared for the project. The VMT analysis from the Transportation Analysis identified that project VMT would exceed the thresholds and identifies feasible mitigation measures to reduce VMT below the thresholds. Therefore, the IS/MND's evaluation of the project's transportation impacts is based on an adopted City policy, with an established methodology compliant with CEQA Guidelines Section 15064.3, and the IS/MND's conclusion the project's impacts would be less than significant is supported by substantial evidence. Therefore, no further response or additional CEQA analysis is required.

**Comment D.7:** Furthermore, the IS/MND acknowledges that the Project's daily Vehicle Miles Traveled ("VMT") would be 15.12 per industrial employee, which exceeds the City's VMT Evaluation Tool's industrial threshold of 14.37 daily VMT per worker:

The proposed Research & Development project, which would support both office and industrial uses, would have 15.12 vehicles miles traveled (VMT) per industrial employee which would exceed the 14.37 VMT per industrial employees and would have 14.95 VMT per office employee which would exceed the 12.21 VMT per office employee threshold.

IS/MND, pp. 10, 160.

Thus, the IS/MND admits that the project's generated VMT would exceed the significance threshold for industrial employment and therefore result in a significant transportation impact on VMT. Id.

To dispose of the need to prepare an EIR, the IS/MND relies on mitigation measure MM TRAN-1.1 to support its contention that the Project would have a less than significant impact with mitigation incorporated as it pertains to CEQA Guidelines Section 15064.3 and its required VMT evaluation of a project's transportation impacts. IS/MND, p. 161. Yet, mitigation measure MM TRAN-1.1 is inadequate for an EIR, given that it is unenforceable, illusory, and infeasible. It also improperly delegates the City's affirmative duty to ensure the reduction of traffic impacts onto the Project's Applicant and further improperly delegates the approval of any traffic mitigation plans to the City's Public Works department, rather than the elected decision-makers. MM TRAN-1.1 also improperly defers mitigation.

Specifically, mitigation measure MM TRAN-1.1 states:

MM TR-1.1: Prior to the issuance Certificate of Occupancy, the project shall implement the following multi-modal infrastructure improvements to incentivize alternative modes of travel and reduce VMT generation for the site:

- The project shall remove the pork-chop islands on the southwest and northwest corners of the Embedded Way and Hellyer Avenue intersection to improve pedestrian safety and access. This improvement shall require a signal modification at this intersection that shall include the relocation of signal poles, heads, and crosswalks.
- The project shall install raised median islands along Embedded Way consisting of a 120-foot segment at its western terminus and a 190-foot segment near the Embedded Way and Hellyer Avenue intersection for traffic calming purposes.

The multi-modal infrastructure improvements shall be part of a Public Improvement Plan that demonstrates how the multi-modal improvements will be implemented and the schedules for completing the improvements. The Public Improvement Plan shall be reviewed and approved by the Director of Public Works or the Director's designee. The implementation of the multimodal improvements shall be verified by the Director of Public Works or the Director's designee.

The implementation of the multimodal infrastructure improvements described above would reduce the VMT generated by the industrial uses to 14.52 VMT per R&D employee and to 114.36 [sic] VMT per office employee which would both still be greater than the established impact thresholds in the City's Transportation Analysis Policy. The project's VMT could be reduced further with the implementation of Travel Demand Management (TDM) measures.

Id.

As can be evinced from the above-quoted IS/MND statements, the proposed plans are aimed to reduce industrial and employee VMT, yet, critically, the VMT "would still be greater than the established impact thresholds in the City's Transportation Analysis Policy." Mitigation measure MM-TRAN-1.1 then concludes that "[t]he project's VMT could be reduced further with the implementation of Travel Demand Management (TDM) measures." Id.

Specifically, MM-TRAN-1.2 states:

Prior to the issuance of the Planning Site Development Permit, the project applicant shall submit a final TDM Plan, approved by the Director of Department of Public Works or Director's designee and the Director of Planning, Building and Code Enforcement, or Director's designee, that shall include implementation of the following TDM measures to reduce the project's VMT.

- Commute Trip Reduction Marketing/Education: Implement marketing/educational campaigns that promote the use of transit, shared rides, and travel through active modes for 25 percent of the project employees. Strategies may include the incorporation of alternative commute options into new employee orientations, event promotions, and publications.
- The TDM plan shall be submitted to the Director of Public Works or Director's designee and the Director of Planning, Building and Code Enforcement or the Director's designee and shall include a trip cap for VMT monitoring purposes. The trip cap shall be prepared by a traffic engineer.

The TDM plan shall be submitted to the Director of Public Works or Director's designee and the Director of Planning, Building and Code Enforcement or the Director's designee and shall include a trip cap for VMT monitoring purposes. The trip cap shall be prepared by a traffic engineer. The monitoring shall be based on annual trip generation counts that demonstrate the vehicle trips generated by the project are within 10 percent of an established peak hour trip cap that is prepared by a traffic engineer. The annual trip monitoring reports shall be submitted that demonstrate that project-generated VMT is below the significance threshold. If the annual trip monitoring report finds that the project is exceeding the established trip cap, the project shall be required to submit a follow-up report that demonstrates compliance with the trip cap requirements within a period not to exceed six months.

IS/MND, pp. 161-162.

The IS/MND concludes that, through the implementation of both MM TRAN-1.1 and MM TRAN-1.2, the Project's VMT would be reduced to 14.36 per employee for research and development (R&D) uses and 12.18 per employee for office uses. IS/MND, p. 162.

**Response D.7:** The comment summarizes the project's VMT impact and associated mitigation measures identified in the IS/MND. As noted in the comment, the IS/MND includes a typo stating that with implementation of MM TRAN-1.1 the VMT per office employee would be reduced to 114.36. The correct value is 14.36 VMT per office employee. This typo has been corrected through a revision to the text of the IS/MND (refer to Section 3.0 Revisions to the Text of the Initial Study, below). With implementation of both MM TRAN-1.1 and MM TRAN-1.2 the VMT would be reduced to 12.34 VMT per employee for warehouse uses and 12.20 VMT per employee of office uses as stated on page 49 of the Transportation Analysis (refer to Appendix H of the IS/MND). The VMT per employee for warehouse uses has been corrected through a revision to the IS/MND as shown in Section 3.0 Revisions to the Text of the Initial Study. The typo and related text revision have no effect on the analysis or conclusions in the IS/MND.

Additionally, the comment asserts that MM TRAN-1.1 is unenforceable, illusory, and infeasible, which is not true. MM TRAN-1.1 requires multi-modal physical

improvements such as removing pork-chop islands and installing raised medians, which are feasible and real, and the construction of which is enforceable by the City. As stated in MM TRAN-1.1, a Public Improvement Plan demonstrating how the multi-modal improvements will be implemented and the schedules for completing the improvements shall be reviewed and approved by the Director of Public Works or the Director's designee, and the project applicant will be required to construct the multi-modal improvements prior to issuance of a certificate of occupancy from the City. Thus, there is a permitting mechanism in place that the City will use to enforce implementation of MM TRAN-1.1; otherwise, the project applicant would not receive a certificate of occupancy. Further, because the mitigation would be implemented prior to project operation, it would not constitute improper deferral of mitigation, as asserted in the comment.

Additionally, the comment incorrectly states that the City is delegating the reduction of traffic impacts onto the project applicant. The City has identified specific physical improvements that would reduce VMT. While the applicant is responsible for implementing the physical improvements, the City is responsible for enforcing proper implementation of the mitigation measure. The measure includes a mechanism for the City to review and approve the design of proposed improvements through the Public Improvement Plan, and also includes a mechanism to ensure the improvements were properly implemented since the certificate of occupancy would not be issued until the City has deemed the mitigation complete.

The comment also incorrectly states that the City is improperly delegating the approval of any traffic mitigation plans to the City's Department of Public Works. The City's Department of Public Works would be the correct department to review the Public Improvement Plan as they are the City's experts on public improvements and infrastructure. The actual approval of the project and adoption of the MND, which includes the identified mitigation measures would be the subject of a public hearing before the Director of Planning, as specified by Title 20 of the City's Municipal Code.

Overall, the comment does not provide substantial evidence (i.e., facts or expert opinion based on facts) supporting a fair argument that the identified mitigation measures are inadequate to reduce project impacts to a less than significant level. No further response or additional CEQA analysis is required.

**Comment D.8:** First, the proposed mitigation measures are illusory given they only require that the Project Applicant submit plans at some future point which the City may then review. These measures further place the burden on the Applicant to "ensure" that the proposed changes result in a reduction of VMT. Simply put, there is no definitive and measurable commitment to mitigation at all. Even under the EIR-related CEQA Guidelines section 15126.4(a)(1)(B), this is improper since, inter alia, the City does not commit to mitigation but rather relies on the applicant to mitigate.

**Response D.8:** This comment asserts that the City is relying on the project applicant to implement mitigation instead of implementing the mitigation itself. While the project applicant will be required to construct the multi-modal improvements and implement the required TDM Plan identified in MM TRAN-1.1 and MM TRAN-1.2 , the City will ensure that the project’s impact on VMT is satisfactorily mitigated. The City is requiring the applicant to construct multi-modal improvements prior to the issuance of the final occupancy permit and requiring an approved TDM Plan capable of reducing project trips to the extent identified in the MM TRAN-1.2 prior to the issuance of the Planning Site Development Permit, as described on page 161 of the IS/MND. A completed TDM Plan for the project is included as Appendix B.

Additionally, the applicant will be required to submit annual reports to the Department of Public Works documenting compliance with the TDM Plan, including monitoring trips associated with the project to ensure they are below an established trip cap. The mitigation measures include clear performance standards and enforcement mechanisms, ensuring that VMT impacts are reduced to a less than significant level. There is no deferral of additional study or development of additional measures to the future nor is there a lack of specificity as to what standard of performance the project must achieve to ensure its impacts are adequately reduced. Additionally, the City is fully capable of confirming that the measures are implemented at the applicable time and are achieving the required effect. The comment does not provide substantial evidence (i.e., facts or expert opinion based on facts) supporting a fair argument that the identified mitigation measures are inadequate to reduce project impacts to a less than significant level. Please also refer to Response D.6 above. This comment does not raise any new CEQA issues or address the adequacy of the IS/MND. No further response or additional CEQA analysis is required.

**Comment D.9:** Second, the proposed mitigation measures are illusory because of their timing (i.e., prior to the issuance of the Certificate of Occupancy and the Planning Site Development Permit) and they do not provide for any discretionary approval or hearing. As related, the proposed mitigation measures provide for “approval” of plans regarding multi-modal infrastructure improvements which may incentivize alternative modes of travel, and such approval will be by the Public Works department, apparently without any public hearing.

**Response D.9:** This comment states that MM TRAN-1.1. and MM TRAN-1.2 are illusory because of their timing and because they do not require discretionary approval. The specific off-site improvements and required contents and performance standards of the TDM Plan are clearly identified in the IS/MND, which will be subject to a discretionary action at a public hearing as part of the Planning Permit hearing process. CEQA does not require that a public hearing be held to adopt an IS/MND, let alone that a public hearing be held to approve a mitigation measure required in the IS/MND (refer to CEQA Guidelines Section 15202). Instead,

the CEQA Guidelines state that if the discretionary action to be taken by the lead agency involves a public hearing, then the CEQA determination to be made for the project should also be part of the public hearing for the project. This is the case for this project, where both the CEQA determination and Planning Permit will be the subject of a public hearing before the Director of Planning, as specified by Title 20 of the City's Municipal Code. As described in Response D.8, the City will ensure that the project's impact on VMT is satisfactorily mitigated by requiring construction of multi-modal improvements prior to the issuance of the final occupancy permit and requiring an approved TDM Plan prior to the issuance of the Planning Site Development Permit. The timing and the manner of the implementation of these mitigation measures have been disclosed to the public, and the public is welcome to provide input on those details at or prior to the public hearing. As discussed above in prior responses, the mitigation measures include clear performance standards and enforcement mechanisms to ensure that VMT impacts are reduced to a less than significant level. The comment does not provide substantial evidence supporting a fair argument that the identified mitigation measures are inadequate to reduce project impacts to a less than significant level, and to the contrary, the IS/MND includes substantial evidence supporting the feasibility and enforceability of the mitigation measures, demonstrating they are not illusory as alleged. Therefore, no further response or additional CEQA analysis is required.

**Comment D.10:** Third, the proposed mitigation measures improperly and speculatively conclude that they will necessarily reduce the traffic impacts to a sufficient level of significance without any assurances, figures, or evidence. The IS/MND fails to offer any evidence showing that Applicant's removal of the pork-chop islands on the southwest and northwest corners of the Embedded Way and Hellyer Avenue and installation of raised median islands along Embedded Way will reduce VMT from 15.12 to 14.52 per industrial employee and 14.95 to 14.36 per office employee. IS/MND, pp. 160-161. Further, the IS/MND fails to offer evidence showing that commute trip reduction marketing techniques, worker education, and vanpool subsidies will so successfully incentivize alternative commute options and promote employee participation to such a degree that VMT will be further reduced from 14.52 to 14.37 for industrial employees and 14.36 to 12.21 for office employees. IS/MND, pp. 161-162.

**Response D.10:** As described on page 162 of the IS/MND, the proposed off-site improvements in combination with the proposed measures in the required TDM Plan would reduce the project's VMT below the City's threshold of 14.37 VMT per industrial employee and 12.21 VMT per office employee.

The recommended removal of pork-chop islands at the Embedded Way and Hellyer Avenue intersection would improve pedestrian safety and access, thereby encouraging people to walk instead of drive short distances and thus reduce the number of vehicle trips, which reduces VMT. Similarly, traffic calming measures such as median islands also promote walking and biking and reduce VMT. VMT reductions due to pedestrian network improvements and traffic calming measures were

estimated using the City's VMT Evaluation Tool based on research conducted by Cambridge Systematics for the Urban Land Institute.<sup>7</sup> These reductions are also recognized by the Valley Transportation Agency (VTA), which is the regional transportation agency for Santa Clara County, and who has developed guidelines and methodologies for estimating and mitigating VMT, based on numerous studies of travel behavior and VMT reduction, which San Jose has incorporated into its VMT Policy 5-1.

The recommended TDM measures would encourage users to commute using transit, shared rides, and active modes of transportation, thereby reducing drive-alone trips and VMT. VMT reductions due to the implementation of commute trip reduction marketing/education were estimated using the City's VMT Evaluation Tool based on research published by the Transit Cooperative Research Program<sup>8</sup>, while research on implementation of subsidized vanpools was published by the Victoria Transport Policy Institute and other sources.<sup>9</sup>

Based on the VMT analysis conducted using the City's VMT Evaluation Tool, the recommended multimodal improvements and TDM measures together would satisfactorily mitigate the project's impact on VMT below applicable thresholds for employee type. The City, through implementation of the Mitigation Monitoring and Reporting Program (MMRP) will ensure that the project's impact on VMT is satisfactorily mitigated by requiring an approved TDM plan prior to the issuance of the Planning Site Development Permit (i.e., prior to the public hearing on the discretionary Planning Permit application). A completed TDM plan for the project is included as Appendix B. Additionally, the City will ensure that the project constructs necessary multimodal improvements prior to the issuance of the final occupancy permit. The Department of Public Works will have the responsibility for reviewing the project's public improvement plan and TDM plan to ensure that the design of the recommended multimodal improvements meets City standards. Additionally, the applicant will be required to submit annual reports to the Department of Public Works documenting compliance with the TDM Plan, including monitoring trips associated with the project to ensure they are below an established trip cap.

The comment alleges the City does not have substantial evidence supporting the effectiveness of the VMT-related mitigation measures, which has been refuted above, and the comment does not provide substantial evidence of its own supporting a fair argument that the identified mitigation measures are inadequate

---

<sup>8</sup> Pratt, Dick. Personal communication regarding the Draft of TCRP 95 Traveler Response to Transportation System Changes – Chapter 19 Employer and Institutional TDM Strategies. Transit Cooperative Research Program.

<sup>9</sup> VTPI. TDM Encyclopedia. <http://www.vtpi.org/tdm/tdm34.htm>; Fare Pricing Elasticity, Subsidies and the Demand for Vanpool Services, Concas, Winters and Wambalaba (2005); Way to Go, 2015 Annual Report.

to reduce project impacts to a less than significant level. Therefore, no further response or additional CEQA analysis is required.

**Comment D.11:** Fourth, based on these mitigation measures, it is the Public Works department, if at all, that will be making the finding that the Project's mitigation plans, as proposed by the Applicant, will indeed reduce traffic impacts to the requisite level of insignificance. This violates CEQA's non-delegation provision. See CEQA Guidelines, § 15025, subd. (b)(2) (Delegation of Responsibilities).

**Response D.11:** As described in Response D.9, the specific off-site improvements and required contents and performance standards of the TDM Plan are clearly identified in the IS/MND, which will be subject to a discretionary action by the decision-making body at a public hearing, consistent with the requirements on CEQA Guidelines Section 15025. Contrary to the assertion in the comment, the Department of Public Works will not be making a CEQA "finding," as defined in Section 15091 and Section 15093 of the CEQA Guidelines, in its role of verifying that the mitigation identified in the IS/MND was properly implemented prior to issuance of future ministerial permits and/or certificates of occupancy. The CEQA findings for the project will be made by the Director of Planning, in the Director's capacity as the decision-maker for the requested Planning Permit, as specified in Title 20 of the City's Municipal Code. The Department of Public Works, in its role ensuring the implementation of certain mitigation measures, is not required to make separate findings. The Department of Public Works is not a separate public agency from the City as lead agency, rather it is a department within the lead agency, and CEQA does not require that separate departments within the lead agency make their own CEQA findings, rather the findings are made by the entity within the City organization vested with the authority to approve the project, which in this case is the Director of Planning, pursuant to Title 20. Therefore, no further response or additional CEQA analysis is required.

**Comment D.12:** Fifth, the mitigation measures are infeasible and illusory given that they are based on the speculation and assumption that the Project's employees will be so motivated and incentivized as to adopt alternative commuting options to get to the Site. There are no assurances that employees will indeed do so. The measures also propose to add and remove components of nearby roads to "to improve pedestrian safety and access" and "for traffic calming purposes." IS/MND, p. 161. Yet, at the same time, the IS/MND elsewhere acknowledges that the Project site will attract heavy-duty trucks: "Based on the 12 truck loading docks, it was assumed that the project would generate 24 trucks or 48 truck trips daily." IS/MND, pp. 38-39. The IS/MND further states that "[a]ll trucks were assumed to be heavy-duty diesel-powered trucks and a source of longterm [diesel particulate matter] emissions." Id. The IS/MND then contends that "[t]hese trucks would travel to and from the site and are anticipated to idle at loading docks for 5 minutes for each trip." IS/MND, p. 39.

It is also reasonably foreseeable that employees will not choose to ride bikes or walk to the Project Site at a minimum due to the road safety concerns as well as concerns about being exposed to a high level of diesel emissions and air and GHG impacts from such heavy trucks on the road and regularly visiting the Site. CEQA requires that in such cases of doubt, the agency should resolve such issues in favor of an EIR. *Nelson v. County of Kern* (2010) 190 Cal.App.4th 252, 282.

The above-noted and critical flaws violate CEQA's standard for IS/MNDs under Public Resources Code section 21064.5 to show that:

(1) [R]evisions in the project plans or proposals made by, or agreed to by, the applicant before the proposed negative declaration and initial study are released for public review would avoid the effects or mitigate the effects to a point where clearly no significant effect on the environment would occur, and (2) there is no substantial evidence in light of the whole record before the public agency that the project, as revised, may have a significant effect on the environment.

Clearly, here, the Project may have significant effects on the environment at least in the context of traffic.

**Response D.12:** The methodology and findings of the Transportation Analysis are consistent with the requirements stated in the City of San Jose Transportation Analysis Handbook. The Transportation Analysis is based on City Council Policy 5-1, which the City has adopted to implement CEQA Guidelines Section 15064.3 related to VMT.

The commenter states that the IS/MND bases its traffic findings on the assumption that employees would be walking or bicycling to the project site. The VMT mitigation measure does not assume that all of the project's employees will be taking bikes or walking to the project site. The mitigation measures consist of the implementation of off-site multi-modal transportation infrastructure improvements as well as TDM measures which would provide better multi-modal transportation facilities and encourage project employees to utilize alternative transportation modes. According to the City's VMT Evaluation Tool, the identified mitigation measures are estimated to reduce the project's VMT to amounts for each type of employee (e.g., industrial and office employees) below the City's threshold of significance. Refer to Response D.10 for further information about the City's VMT Evaluation Tool and the sources used by the VMT Evaluation Tool to estimate the reduction in VMT due to the bike, pedestrian, and traffic calming improvements. Additionally, the applicant will be required to submit annual reports to the Department of Public Works documenting compliance with the TDM Plan, including monitoring trips associated with the project to ensure they are below an established trip cap, thus ensuring the project's VMT remains below established thresholds. Further, the comment does not provide substantial evidence to support its claim that truck traffic generated by the project, and the associated emissions, would

render the identified mitigation measures ineffective. The analysis of the project's trucking activity included elsewhere in the IS/MND, such as in *Section 4.3 Air Quality* and *Section 4.13 Noise*, show that project impacts related to air emissions and vehicle noise, are less than significant. Therefore, there is no basis to conclude on-site truck activity would discourage employees from traveling to/from the site by other modes than vehicles in sufficient numbers to undermine the effectiveness of the mitigation measures. Without substantial evidence to provide otherwise, it is speculative to assume that implementation of MM TRAN-1.1 would lead to VMT impacts remaining above applicable thresholds. The comment simply speculates that a sufficient amount of project employees would be discouraged from arriving via modes other than vehicles, but cites no facts, evidence, studies, etc. in support of the allegation, only unsupported opinion. Overall, the comment does not provide substantial evidence supporting a fair argument that the identified mitigation measures are inadequate to reduce project impacts to a less than significant level. Therefore, no further response or additional CEQA analysis is required.

**Comment D.13:** Sixth, the proposed mitigation measures are improperly deferred and vague as they defer the formulation of mitigation measures or final design thereof to a later time, shift that burden to the Applicant, and further do not adequately explain how removing the pork-chop islands or installing raised median islands will improve pedestrian safety and calm traffic to such a degree that such measures will “clearly” reduce VMT to the requisite level of insignificance, as required for an IS/MND.

**Response D.13:** As discussed in Response D.8, the mitigation measures in the IS/MND include clearly defined performance standards and enforcement mechanisms and, therefore, do not represent improper deferral of mitigation under CEQA. The mitigation measures identified (MM TRAN-1.1 and MM TRAN-1.2) are known to be capable of reducing VMT to the necessary degree (refer to Response D.10) and are fully capable of being monitored for their effectiveness. Additionally, as discussed in Response D.10, the conclusion in the IS/MND that VMT impacts would be reduced to a less than significant level is supported by substantial evidence in the form of the Transportation Analysis (refer to Appendix H of the IS/MND) prepared for the project in compliance with the City's Policy 5-1. The City's policy is based on studies and models developed by other agencies with expertise in this area, including the VTA, to successfully comply with Guidelines section 15064.3. Therefore, no further response or additional CEQA analysis is required.

**Comment D.14:** As stated previously, the IS/MND fails to meet CEQA's pre-conditions and requirements even in the case of an EIR. CEQA forbids deferred mitigation. CEQA Guidelines, § 15126.4, subd. (a)(1)(B). CEQA allows deferral of details of mitigation measures only “when it is impractical or infeasible to include those details during the project's environmental review.” *Id.* CEQA further requires that the lead agency:

- (1) [C]ommits itself to the mitigation, (2) adopts specific performance standards the mitigation will achieve, and (3) identifies the type(s) of potential action(s) that can feasibly achieve that performance standard[.]

CEQA Guidelines, § 15126.4, subd. (a)(1)(B).

Here, the City failed each of these preconditions and requirements, as the IS/MND fails to show why the development of the traffic calming plans or pedestrian improvements could not be developed before the issuance of the IS/MND, what impacts they will have individually or cumulatively, if such plans would indeed be feasible, and the specific performance criteria that Applicant will have to meet. Moreover, as noted previously, the City clearly did not commit to mitigation, since all it would do, per the mitigation measures, is review and approve Applicant's proposed plans.

**Response D.14:** Please refer to Responses D.8 through D.13, which address the assertions made in this comment. To reiterate the above responses, the mitigation measures have not been deferred; the specific physical improvements are well-defined; and the TDM Plan will be approved prior to the Director's Hearing for the Planning Permit. Furthermore, the effectiveness of these measures is demonstrated by the City's VMT Evaluation Tool. Therefore, no further response or additional CEQA analysis is required.

**Comment D.15:** Furthermore, mitigation measure MM TRAN-1.1 relies on some future coordination with other public entities aside from the City to implement the measure and does not show how it will be enforced nor what the outcome will be.

**Response D.15:** MM TRAN-1.1, which requires improvements to City roadways and transportation facilities, does not rely on other public entities aside from the City for implementation. As discussed above in Response D.11, the Department of Public Works is part of the lead agency and is not a separate authority or agency.

**Comment D.16:** For example, there is no requirement that Applicant report the number of employee trips after the pork-chop islands are removed and median islands installed or to ensure that the VMTs are indeed reduced to the requisite level of insignificance such that an IS/MND would suffice to bring the Project in compliance with CEQA. Yet again, this mitigation measure fails to explain how simply encouraging pedestrian travel will actually discourage vehicle travel and thus cause an actual decrease in VMT resulting from the Project and thus result in a less than significant impact on traffic and transportation.

**Response D.16:** As described in Response D.8, MM TRAN-1.2 explicitly requires annual monitoring of project trips for comparison against a trip cap to ensure that project VMT remains at a less than significant level for the lifetime of the project. The purpose of the trip cap is to show the number of trips is below the applicable thresholds, and therefore the VMT resulting from the project (given VMT equals

trips times trip lengths) would be reduced. By capping trips, VMT will be below the thresholds. This requirement placed on the applicant will be monitored and enforced by the City as specified in MM TRAN-1.2. Furthermore, as described in Response D.10, the VMT Evaluation Tool, which is based on substantial evidence, accounts for the VMT reductions the multi-modal improvements detailed in MM TRAN-1.1 would provide. This comment alleges a lack of substantial evidence for the City's determination, which has been fully refuted, and the comment provides no substantial evidence of its own, in the form of facts, or expert opinion supported by facts. Therefore, no further response or additional CEQA analysis is required.

**Comment D.17:** The foregoing measure is impermissibly vague and improperly defers the actual reduction in VMT to some later unspecified date without showing how these proposed measures would reduce VMT.

**Response D.17:** As discussed in Responses D.8, D.13, and D.16, the VMT-related mitigation measures in the IS/MND include clearly defined performance standards (e.g., trip cap) and enforcement mechanisms (e.g., surveys). Based on these reasons, these mitigation measures (MM TRAN-1.1 and MM TRAN-1.2) do not represent improper deferral of mitigation under CEQA, as the project is required to demonstrate achievement of definite. There are measurable outcomes that are below the level of significance that the lead agency (i.e., the City of San José) can readily monitor and enforce.

**Comment D.18:** Yet another flaw in the City's traffic impact analysis is its reliance on Senate Bill 743 ("SB 743") to disregard traffic congestion. The City claims it provides a level of service analysis for information purposes only. IS/MND, p. 164. And yet, SB 743 on its face does not apply to industrial projects here, but rather to commercial and residential projects only. Further, the IS/MND fails to include an Intersection Level of Service, as is required under existing, background, and background plus project conditions, yet the City claims the traffic impacts will be less than significant despite that certain intersection levels may worsen after implementation of the Project.

**Response D.18:** Pursuant to Senate Bill (SB) 743 and CEQA Guidelines Section 15064.3, the CEQA metric for transportation impacts is VMT, and nothing in Section 15064.3 indicates that VMT is not to be utilized for industrial projects, or that VMT is to be used only for commercial and residential projects. Such a suggestion is simply wrong. Furthermore, SB 743 clearly states that vehicle delay (or Level of Service [LOS]) is not an impact under CEQA. This was affirmed by the appellate court in *Citizens for Positive Growth & Preservation v. City of Sacramento* (Dec. 18, 2019) 43 Cal.App.5th 609. Thus, the comment's claim that LOS was required by CEQA to be evaluated in the IS/MND is also wrong. The City adopted its Transportation Analysis Policy (Council Policy 5-1) to align with SB 743 and the goals set forth in the Envision San Jose 2040 General Plan. A summary of SB 743 and Council Policy 5-1 is provided on pages 155 and 156 of the IS/MND, respectively. The comment provides no evidence to support its claim that SB 743, or Guidelines Section 15064.3

implementing SB 743, does not apply to industrial projects. CEQA Guidelines Section 15064.3 provides substantial discretion for lead agencies in how to evaluate VMT, including allowing for both qualitative and quantitative approaches. The City, as the lead agency, has elected to use a quantitative approach in Council Policy 5-1 by employing numeric thresholds for various land uses (including industrial land uses) and this approach is well within the City's discretion in implementing Guidelines Section 15064.3.

As described on page 156 of the IS/MND, SB 743 requires "the replacement of automobile delay-described solely by level of service or similar measures of vehicular capacity or traffic congestion-with VMT as the recommended metric for determining the significance of transportation impacts." SB 743 is intended to replace LOS with VMT for evaluating transportation impacts for new development projects, including industrial projects. Therefore, there is no requirement to include results of an intersection LOS analysis, other than to identify the potential need for roadway improvements which would be evaluated as related physical changes to the environment.

As explained in IS/MND Section 4.17.3 Non-CEQA Effects, Policy 5-1 requires preparation of a Local Transportation Analysis (LTA) to analyze non-CEQA transportation issues. The LTA typically includes local transportation operations, intersection level of service, site access and circulation, and neighborhood transportation issues such as pedestrian and bicycle access. If potential transportation issues are identified then recommendations for transportation improvements are provided to ensure that any off-site transportation improvements are also accounted for as part of the IS/MND Project Description.

Nothing contained within this comment constitutes substantial evidence that the project's transportation impacts would be significant beyond what has already been disclosed regarding VMT impacts. Also as stated above, the vehicular delay at intersections serving the site (whether under project conditions, background, or cumulative) is no longer considered an impact on the environment with passage of SB 743. Therefore, no further response or additional CEQA analysis is required.

**Comment D.19:** Finally, also given that construction of the Project itself may result in road closures and detours, there is a fair argument that the Project may have significant traffic impacts which should be assessed in an EIR pursuant to CEQA.

**Response D.19:** As stated on page 111 of the IS/MND, the project would not result in closure, rerouting or substantial alteration of streets or property access points during or after construction. The project does not front onto a public road other than an existing driveway on Embedded Way, and the project's use of that driveway during construction would not cause the closure of Embedded Way or detours. Construction would occur within the project site boundaries and setback hundreds

of feet from public streets. The comment speculates without any facts or analysis that project construction may cause road closures or detours and does not provide substantial evidence supporting a fair argument that the project would result in significant impacts related road closures and detours during construction. This comment does not raise any new CEQA issues or address the adequacy of the IS/MND. No further response or additional CEQA analysis is required.

**Comment D.20:** For the reasons set forth above, the IS/MND fails to prove that the Project's traffic impacts will be mitigated to a less than significant level with the incorporation of the proposed mitigation measures. In fact, the IS/MND shows the opposite, necessitating the preparation of an EIR.

**Response D.20:** As described in Responses D.8 through D.19, the commenter has not identified any new or more significant transportation impacts that have not already been addressed by the IS/MND, nor has the commenter produced any facts, reasonable inferences based on facts, or expert opinion based on facts, that project impacts would not be capable of mitigating impacts, where necessary, to less than significant levels. The commenter has also not proven that project impacts would remain significant nor has the commenter shown that the City's determinations regarding the project's traffic impacts are not supported by substantial evidence. To the contrary, mitigation measures MM TRAN-1.1. and MM TRAN-1.2 are feasible and enforceable mitigation measures that, based on substantial evidence, have been determined to reduce the project's VMT impacts to a less than significant level. The commenter has not provided substantial evidence supporting a fair argument that the project would result in significant unavoidable transportation impacts that would require the preparation of an EIR. Therefore, no further response or additional CEQA analysis are required.

**Comment D.21:** C. There Is a Fair Argument that the Project May Have Significant Air Quality, GHG Emission, Water, Noise, Hazards, Human Health, and Wildlife/Biological Impacts, and Cumulative Impacts, Requiring Mandatory Findings of Significance and the Preparation of an EIR.

**Response D.21:** This comment claims a fair argument exists, but provides no specific comment, and introduces topics discussed in more detail in comments that follow below. As described in further detail in the responses below, the commenter does not provide substantial evidence supporting a fair argument that the project, after identified mitigation, would result in significant unavoidable impacts. The analysis and conclusions in the IS/MND are supported by substantial evidence and, therefore, the preparation of an EIR is not required.

**Comment D.22:** Given that the Project may have significant traffic impacts that are not accurately disclosed or mitigated against in the IS/MND, then its traffic-related impacts are also derivatively understated and may be significant, thereby requiring the preparation and circulation of an EIR.

There is an acknowledged direct correlation between the increase in traffic impacts and an increase in the associated air quality, GHG emission, and noise impacts. See e.g., *City of Redlands v. County of San Bernardino* (2002) 96 Cal.App.4th 398, 413 (“it is reasonable to assume” that a project enabling physical residential development would have reasonably foreseeable indirect air and other impacts).

As stated in the Office of Planning Research’s (“OPR”) technical advisory in 2018:

VMT and Greenhouse Gas Emissions Reduction. Senate Bill 32 (Pavley, 2016) requires California to reduce greenhouse gas (GHG) emissions 40 percent below 1990 levels by 2030, and Executive Order B-16-12 provides a target of 80 percent below 1990 emissions levels for the transportation sector by 2050. The transportation sector has three major means of reducing GHG emissions: increasing vehicle efficiency, reducing fuel carbon content, and reducing the amount of vehicle travel.

Similarly, there is an acknowledged nexus between the increase in traffic and in related air quality, GHG impacts, noise, water/flooding impacts, and impacts on human health and the natural environment, including wildlife and waterways. As described in the 2018 OPR Technical advisory:

VMT and Other Impacts to Health and Environment. VMT mitigation also creates substantial benefits (sometimes characterized as “co-benefits” to GHG reduction) in both in the near-term and the long-term. Beyond GHG emissions, increases in VMT also impact human health and the natural environment. Human health is impacted as increases in vehicle travel lead to more vehicle crashes, poorer air quality, increases in chronic diseases associated with reduced physical activity, and worse mental health. Increases in vehicle travel also negatively affect other road users, including pedestrians, cyclists, other motorists, and many transit users. The natural environment is impacted as higher VMT leads to more collisions with wildlife and fragments habitat. Additionally, development that leads to more vehicle travel also tends to consume more energy, water, and open space (including farmland and sensitive habitat). This increase in impermeable surfaces raises the flood risk and pollutant transport into waterways.

As such, there is a fair argument that the Project here may have significant GHG emissions, air quality, energy, water, noise and other impacts, including impacts on human beings and the natural environment.

**Response D.22:** This comment raises general issues that would result from virtually any development that generates new VMT by noting various topics that are related to the magnitude of VMT generated by a project. However, nothing in the comment is specific to the project’s VMT and resulting traffic-related impacts, such as air pollution, energy consumption, roadway noise, etc. Rather, the comment only makes general observations about how VMT can lead to other impacts. The comment does not make a specific argument, based on substantial evidence, as to why the project’s VMT would lead to significant impacts to other topics. As

described in Responses D.7 through D.18, the project would result in a significant increase in VMT, as judged using the City's thresholds which are based on per employee VMT; however MM TRAN-1.1 and MM TRAN-1.2 would sufficiently reduce the project's VMT below established thresholds. The comment does not provide substantial evidence supporting a fair argument that the project, applying a per employee VMT threshold as allowed by Guidelines section 15064.3, would result in significant VMT impacts that are un-mitigable. However, the comment appears more focused on the general magnitude of project VMT and the impacts that would result, rather than the amount of VMT per employee. Fortunately, to address the commenter's concerns regarding the magnitude of VMT, the IS/MND and a number of supporting technical reports have accounted for the total amount of VMT that the project would generate. Relevant thresholds are applied to various environmental topics such as air pollution, energy consumption, roadway noise, etc. where impacts would be significant. The comment does not acknowledge the IS/MND's evaluation, which is based on multiple technical reports, of project impacts in these other topic areas resulting from the magnitude of project VMT. Additionally, as described in further detail in the responses below, the commenter does not provide substantial evidence supporting a fair argument that the project would result in significant GHG emissions, air quality, energy, water, noise, and other impacts. The analysis and conclusions in the IS/MND are supported by substantial evidence and, therefore, an EIR is not required.

**Comment D.23:** 1. GHG Emissions and Air Quality Impacts

The IS/MND ultimately concludes that the Project will have a less than significant impact with regards to GHG emissions based only on the contention that "Project construction would occur over a period of approximately 10 months and would result in the release of 140 MTCO<sub>2e</sub>." IS/MND, p. 99. The IS/MND then contends that the Project construction activity and resulting GHG emissions "would not interfere with the implementation of Senate Bill 32. Id.

The IS/MND completely fails to analyze, to any degree sufficient to constitute compliance with CEQA, the Project's potential GHG emissions impacts, and instead offers a conclusory statement that because construction emissions would occur over a certain period and result in a certain tonnage of CO<sub>2</sub>, that the Project will not result in a significant impact with regards to GHG emissions. Consequently, the IS/MND requires substantial revisions or an EIR must be prepared.

**Response D.23:** The CEQA Guidelines do not require the quantification of GHG emissions, as qualitative approaches to evaluating a project's GHG emissions are explicitly allowed; therefore, the City was not required to quantify construction-related GHG emissions. However, the City chose to quantify the magnitude of construction-related GHG emissions (140 total MTCO<sub>2e</sub>) so the project's contribution could be compared within the context of the statewide GHG emissions goal for 2030 (260 million MTCO<sub>2e</sub>).

The regional agency with substantial expertise in evaluating GHG emissions has issued guidelines, which do not include quantitative thresholds for construction-related GHG emissions. As stated on page 6-7 of the BAAQMD 2022 CEQA Air Quality Guidelines, BAAQMD has not developed a quantitative threshold for construction since the GHG emissions are temporary and variable but the Air District recommends construction GHG emissions be quantified for purposes of disclosure.<sup>10</sup> Per the Appendix B of the 2022 CEQA Air Quality Guidelines, there is no proposed threshold since the “Greenhouse gas emissions from construction represent a very small portion of a project’s lifetime GHG emissions.”<sup>11</sup> As shown on page 99 of the IS/MND, the approximate construction generated GHG emissions (140 total MTCO<sub>2e</sub>) are disclosed and it is stated that the contribution of construction-related GHG emissions are essentially temporary and would not contribute to a significant GHG impact. Once construction is complete, the construction-related GHG emissions would cease to be emitted. For these reasons, the construction GHG emissions (roughly one half of one millionth the amount of annual statewide emissions required in 2030) would not have an impact that would interfere with State laws, such as Senate Bill 32, that works to reduce active operational sources of GHG emissions. This comment does not present new information that has not been previously analyzed in the IS/MND nor does it provide substantial evidence supporting a fair argument that the project would result in significant unavoidable impacts requiring preparation of an EIR.

**Comment D.24:** In terms of the Project’s operational emissions, the IS/MND too heavily depends on the Project’s consistency with the General Plan land use designation for the Site and planned growth from build out of the General Plan and that “the project’s GHG emissions are accounted for in the citywide GHG emissions inventory addressed in the GHGRS, provided the project complies with applicable GHG reduction measures identified in the GHGRS.” IS/MND, p. 99. The IS/MND’s reliance on the Project’s consistency with the City’s 2030 GHG Reduction Strategy (“GHGRS”), i.e., the hope that the Project “complies with applicable GHG reduction measures,” cannot constitute as mitigation nor a determination that the Project will have less than significant impacts for purposes of CEQA compliance.

The IS/MND concludes that the Project will have less than significant GHG emissions impacts due to the Project’s adoption of certain measures of the GHGRS, including consistency with the Land Use/Transportation Diagram designation of the General Plan and enrollment in the SJCE TotalGreen program. IS/MND, p. 100.

According to the IS/MND, the Project will be designed and constructed in compliance with the City of San Jose Council Policy 6-32, the City's reach code, and the City's Green Building Ordinance. IS/MND, p. 101. However, the Project's mere implementation of GHG reduction strategies, compliance with city initiatives, and reliance on regulations is insufficient to conclude that the Project will have less than significant GHG emissions impacts, as these measures are not specific to this Project.

That the Project may have air quality and GHG emissions impacts is also evidenced by the recent BAAQMD thresholds, according to which "[i]f the project includes any of the operational screening criteria above [including industrial sources or activities], then the lead agency would need to perform a detailed assessment of the project's criteria air pollutant and precursor emissions."<sup>12</sup> Yet, the IS/MND concludes that the Project will have neither GHG emissions nor air quality impacts.

The Project may further have severe GHG emissions and air quality impacts in light of its traffic mitigation measure which assumes that the employees will choose to bike or walk to the Project Site and thereby be exposed to the high level of diesel emissions of heavy trucks both at the Project Site and the nearby industrial sites. Such increased GHG emissions and air quality impacts may also occur in light of the fact that the Project proposes traffic-calming alterations to nearby roads, which reasonably foreseeably—along with the trucks and bikes riding on the same roads—will create congestion on the roads and idling of the heavy-duty trucks, as well as other vehicles.

**Response D.24:** As noted above in Response D.23, CEQA allows for both qualitative and quantitative approaches to evaluate a project's GHG emissions. In turn, as described on page 98 of the IS/MND, BAAQMD has promulgated two qualitative thresholds of significance a lead agency may opt to use for the operational GHG emissions generated from a new land use development project: (1) qualitative project design measures related to building design and transportation or (2) consistency with a local GHG reduction strategy that meets the criteria under the State CEQA Guidelines Section 15183.5(b). The City of San José's 2030 Greenhouse Gas Reduction Strategy is a qualified GHG reduction strategy that meets the criteria stated CEQA Guidelines Section 15183.5(b); therefore, the use of the City's 2030 Greenhouse Gas Reduction Strategy Compliance Checklist to demonstrate consistency with a qualified local GHG reduction strategy is appropriate and conforms with BAAQMD's latest CEQA guidance for GHG analyses. Furthermore, the City of San José's Department of Planning, Building, & Code Enforcement will enforce the GHG reduction measures the project committed to in the completed Greenhouse Gas Reduction Strategy Consistency Checklist (refer to Appendix E of the IS/MND) via site plan review and during the permitting process. Therefore, the GHG reduction strategies from the City's Greenhouse Gas Reduction Strategy Consistency Checklist are specific to the project, and the project would have less

---

<sup>12</sup> BAAQMD, Chapter 4, p. 4-3; see available at: Bay Area Air Quality Management District California Environmental Quality Act Air Quality Guidelines ([baaqmd.gov](http://baaqmd.gov)).

than significant GHG impacts. The approach employed by the City to evaluate and conclude that the project's GHG emissions are less than significant is explicitly allowed by CEQA. The approach is further supported by the BAAQMD, the regional agency with substantial expertise regarding evaluating GHG emissions from new development. Therefore, the City's approach is legal and supported by substantial evidence.

The comment further alleges, without substantial evidence, the project would have significant air quality impacts. To the contrary, the project would not have significant air quality impacts as described in *Section 4.3 Air Quality* of the IS/MND. A technical Air Quality Assessment was prepared by Illingworth & Rodkin, Inc., in August 2022 and is included as Appendix A to the IS/MND. This Air Quality Assessment was prepared following BAAQMD methodologies, and modeled criteria air pollutant emissions that would be generated by the project during construction and operation and prepared a refined health risk assessment. The results of the Air Quality Assessment were compared to the BAAQMD thresholds of significance for both construction and operation and all project generated emissions and health risks would be under the BAAQMD thresholds. Refer to pages 35, 36, 39, and 41 of the IS/MND for the computed air quality emissions and health risk impacts. The several conclusions in the IS/MND that the project would have less than significant air quality impacts related to both construction criteria pollutants and health risk and operational criteria pollutants and health risk, are, therefore, based on substantial evidence.

The commenter also states that future employees of the project would be exposed to high level of diesel emissions of heavy trucks both at the project site and the nearby industrial sites due the nature of the project area and with the assumption the project would result in more congestion with implementation of multi-modal infrastructure improvements detailed in MM TRAN-1.1. This is a speculative comment with no substantial evidence to demonstrate that implementation of MM TRAN-1.1 would increase congestion and idling of heavy-duty trucks. Additionally, per *California Building Industry Association v. Bay Area Air Quality Management District*, 62 Cal. 4th 369 (BIA v. BAAQMD), effects of the environment on the project, (i.e., future project employees), are not considered CEQA impacts.

Overall, this comment does not present new information that has not been previously analyzed in the IS/MND nor does it provide substantial evidence supporting a fair argument that the project would result in significant unavoidable impacts requiring preparation of an EIR.

**Comment D.25:** 2. Hazard Impacts

The Project may also have hazards impacts, in light of potential soil contamination due to prior agricultural work and use of pesticides. The Project's Phase I ESA, for this purpose, discloses such potential. Phase I ESA, p. 10. And yet, the Phase I ESA does not adequately study that potential as,

inter alia, it concludes, without supporting evidence, that “the potential for residual pesticides, if any, at these locations to significantly impact the planned commercial use of the Site appears low.” Id. It reaches this conclusion despite admitting that “residual pesticide concentrations could remain in on-Site soil.” Id. The Phase I ESA also recommends that soil sampling be conducted in order to determine if naturally occurring asbestos (“NOA”) is present at the Site and whether an asbestos dust mitigation plan (“ADMP”) and associated air monitoring is required. Phase I ESA, p. 11. Fatally, the timing of such study and determination of the need for mitigation should have been conducted prior to and in preparation of the IS/MND, not at some future date considering that the Site is located within an area of mapped ultramafic rock outcrops in which asbestos occurs naturally. Phase I ESA, p. 10. Further, Phase I ESA prepared in 2021 uses the older ASTM standard. Id. (“Cornerstone performed this Phase I ESA in general accordance with ASTM E1527-13”).

This omission is particularly critical and constitutes the Phase I ESA as tellingly inaccurate given that as of 2021—post-dating the October 17, 2021, ESA Phase I Environmental Site Assessment—ASTM has revised its standards, and as of 2022, EPA<sup>13</sup> has adopted ASTM’s new and more expansive definition of REC. Thus:

“Under ASTM E1527-13, a REC is defined as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

Under ASTM E1527-21, a REC means (1) the presence of hazardous substances or petroleum due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products due to a likely release to the environment; or (3) the presence of hazardous substances or petroleum products under conditions that pose a material threat of a future release to the environment. Further, the new standard provides clarifying discussion notes and examples to assist the environmental professional in applying the definition. Together, the new definition and interpretations direct a consultant to rely on the environmental professional’s experience regarding the likelihood of certain conditions resulting in releases, such as the long term operation of a dry cleaner, instead of discounting that professional experience based on the lack of current “indications of a release.”<sup>14</sup> (ital. original, bold emphasis added.)

**Response D.25:** As described in pages 109 and 110 of the IS/MND, the project site’s baseline condition is such that the soil on the project site could be contaminated with agricultural chemicals and naturally occurring asbestos (NOA) due to its past use as an orchard and the presence of ultramafic rock outcrops. The presence of agricultural chemicals and naturally occurring asbestos were identified as potential environmental concerns. The site is undeveloped and vacant with no history of

---

<sup>13</sup> <https://www.govinfo.gov/content/pkg/FR-2022-03-14/pdf/2022-05259.pdf>.

<sup>14</sup> <https://www.quarles.com/publications/epa-approves-astm-e1527-21-phase-i-esa-standardfor-all-appropriate-inquiry/>.

hazardous substances or petroleum products being stored or used on-site. Considering that the IS/MND and the supporting Phase I ESA identified a potential hazards impact, the change in the ASTM E1527-21 definition does not fundamentally change the impact identified or mitigation measures required to reduce the impact. The impacts the commenter is concerned about, given the baseline conditions of the project site, have been disclosed in the IS/MND and appropriate mitigation has been included in the project. MM HAZ-1.1 and MM HAZ-1.2 have measures that have been employed routinely for sites known or suspected to have residual agriculture pesticides and NOA, as these are not unique or unusual circumstances, and the approaches to address the conditions are well established and effective. Implementation of MM HAZ-1.1 and MM HAZ-1.2, would require the preparation of a Phase II soil contamination investigation prior to the issuance of a grading permit. If contaminated soil is found on-site, then appropriate measures would be utilized during construction to protect employees and the environment generally from the release of these soils. The mitigation measures in the IS/MND include clearly defined performance standards and enforcement mechanisms and, therefore, do not represent improper deferral of mitigation under CEQA. Overall, the comment does not provide substantial evidence supporting a fair argument that the identified mitigation measures are inadequate to reduce project impacts to a less than significant level. The IS/MND's description of the baseline conditions, the potential for the project to create significant impacts, and the effectiveness of the mitigation measures to reduce impacts to less than significant levels are all supported by substantial evidence in the IS/MND and supporting Phase I ESA. Therefore, no further response or additional CEQA analysis is required.

**Comment D.26:** Lastly, the Phase I ESA is silent on vapor intrusion REC, which study is specifically mandated by ASTM and the Environmental Protection Agency (“EPA”) since 2013 under the EPA Final Rule.<sup>15</sup> Thus, in its Final Rule in 2013, the EPA states:

EPA believes that ASTM E1527–13 improves upon the previous standard and reflects the evolving best practices and level of rigor that will afford prospective property owners necessary and essential information when making property transaction decisions and meeting continuing obligations under the CERCLA liability protections. In particular, the new ASTM E1527–13 standard enhances the previous standard with regard to the delineation of historical releases or recognized environmental conditions at a property and makes important revisions to the standard practice to clarify that all appropriate inquires and phase I environmental site assessments must include, within the scope of the investigation, an assessment of the real or potential occurrence of vapor migration and vapor releases on, at, in or to the subject property.

Federal Register, Vol. 78, No. 250, December 30, 2013, p. 3 (emph. added).

---

<sup>15</sup> <https://www.govinfo.gov/content/pkg/FR-2013-12-30/pdf/2013-31112.pdf>.

**Response D.26:** Based on the information presented in the agency database report on page 5 of Appendix F - Phase I Environmental Site Assessment, , no off-site spill incidents were reported that appear likely to significantly impact soil, soil vapor or groundwater beneath the project site. The project site is also undeveloped with no history of using or storing hazardous materials on the site. The two potential concerns identified, related to residual agricultural pesticides and NOA, are not contributors to soil vapor. Therefore, vapor migration and vapor releases were not identified as a concern requiring further evaluation. The comment does not provide substantial evidence supporting a fair argument that the project would result in significant impacts related to vapor intrusion. No changes to the text of the IS/MND are required.

**Comment D.27:** As such, the Phase I ESA's reliance on a soil sample to be collected at some future date with the expectation that it may produce asbestos results given the Site's location within an area of mapped, asbestos-containing ultramafic rock outcrops, and failure to consider a more comprehensive ASTM E1527-21 suggests that the Project Site may have hazards impacts that have not been studied and accounted for. Needless to say that, per the Phase I ESA, the Project had to be a commercial one—rather than industrial. All of these factors suggest the Project may have hazards impacts, which may also translate into adverse impacts to human beings, including employees of the Project Site as well as other human beings and sensitive receptors, including during the Project's construction, grading, and dirt-hauling phase.

**Response D.27:** The comment does not provide substantial evidence supporting a fair argument that the IS/MND did not disclose all relevant hazard impacts within the project area. The Phase I ESA, which is Appendix F to the IS/MND, did identify NOA as a potential environmental concern and the IS/MND incorporated MM HAZ-1.1 and MM HAZ-1.2 to reduce hazards-related impacts. The use of the ASTM E1527-21 standard would not have changed the results of the Phase I ESA or the incorporation of MM HAZ-1.1 and MM HAZ-1.2 considering the project site has been historically undeveloped. There is no history of spills or releases due to the site's undeveloped nature. No changes to the text of the IS/MND are required. See also Responses D.25 and D. 26.

**Comment D.28:** Lastly, the IS/MND acknowledges the potential for significant hazards impacts including on human health, yet concludes, without evidentiary support, that “[c]ompliance with the broad array of existing regulations from state and local governments noted above in Section 4.9.1.1 Regulatory Framework would ensure the project would result in less than significant impacts related to the potential routine transport, use, or disposal of hazardous materials.” IS/MND, p. 109. Again, the Project's mere implementation of hazards reduction strategies, compliance with city initiatives, and reliance on regulations is insufficient to conclude that the Project will have less than significant hazards impacts, as these measures are not specific to this Project.

**Response D.28:** The comment fails to capture and acknowledge the analysis in the IS/MND related to the potential routine transport, use, or disposal of hazardous

materials. The excerpt quoted in the above comment is the conclusion sentence for the analysis. On page 109 of the IS/MND, it is specifically stated that the project would be required to comply with the State's Hazardous Materials Management Program, a State program governing how hazardous materials must be managed. It is specifically noted that if a project handles hazardous materials, a Hazardous Materials Business Plan with information about the handling and storage of hazardous materials (including site layout, storage in appropriate containers with secondary containment to contain a potential release, and emergency response and notification procedures in the event of a spill or release) would need to be prepared and submitted to the Santa Clara County Hazardous Materials Compliance Division, the local Certified Unified Program Agency for Santa Clara County. Additionally, on the same page, the IS/MND notes that project would be required to comply with code requirements from the City of San José Fire Department, the San José–Santa Clara Wastewater Treatment Facility, the Santa Clara County Department of Environment Health (SCCDEH), and the California Department of Transportation as it relates to the storage, transportation, and disposal of hazardous materials. The IS/MND does not merely state that the project would be required to comply with applicable regulations. Instead, specific laws and regulations related to the handling of hazardous materials are explained in detail and the specific authorities tasked with overseeing the compliance are identified. A project specific mitigation measure is not required if there are already laws or legal requirements in place that would reduce impacts. The comment does not provide substantial evidence supporting a fair argument that additional mitigation is needed to reduce the project's hazardous materials impacts to a less than significant level. Therefore, no further response or additional CEQA analysis is required.

**Comment D.29:** 3. Water Quality Impacts

As for water impacts, the IS/MND acknowledges that the Project site soils may be contaminated, including with NOA and due to the presence of agricultural chemicals. IS/MND, p. 109. As such, to the extent the Project's grading affects the underground waters, there is a reasonable foreseeability that the Project may have water impacts. Moreover, based on the IS/MND, the Project will require disturbance of soil on 10.1 acres of land, permanent conversion of 0.4 acres of mixed oak woodland to suburban land uses, permanent impacts on one acre of serpentine bunchgrass grassland and approximately 6.6-acres of California annual grassland (IS/MND, p. 59), removal of at least 11 trees including approximately nine mature native oak trees (IS/MND, pp. 50, 58), and removal of Santa Clara Valley dudleya (a federally endangered species and a Habitat Plan covered species) (IS/MND, p. 49). As such, the Project may affect the natural drainage patterns and thus have water/hydrology impacts.

**Response D.29:** To address the possible presence of NOA and agricultural chemicals in the soil on-site, the project would be required to conduct a Phase II soil investigation and create a Site Management Plan (or equivalent document) if concentrations exceed environmental screening levels pursuant with MM HAZ-1.1 and MM HAZ-1.2, respectively. Completion of these two mitigation measures would

occur prior to construction activities. Groundwater would not be contaminated as a result of construction grading activities because the agricultural chemicals and NOA are already present in the undeveloped site soils. Thus, under baseline conditions, runoff is currently infiltrating through the site soils, and the exposure of these soils during construction would not further subject them to runoff. Additionally, the project would not encounter groundwater during construction, given groundwater depths are 30 feet below ground surface and construction would not extend beyond 20 feet for utility trenches and foundations.

As stated on page 121 of the IS/MND, the natural drainage patterns of the site would change as a result of the project because the amount of impervious area would increase as compared to existing conditions. As required by the Regional Water Quality Control Board Municipal Regional Stormwater National Pollutant Discharge Elimination System Permit (MRP) and the City's Post-Construction Urban Runoff Management Policy (City Council Policy No, 6-29), the project would be required to include 'low impact development' stormwater treatment controls to maintain or restore the site's natural hydrologic functions. Furthermore, as part of the application review and permitting process, the City reviews site plans to ensure the project design includes proper stormwater control design features. To control runoff, the project includes two unlined bioretention basins with underdrains and a subsurface infiltration system underneath the western parking lot. Therefore, the project includes design measures to reduce operational impacts on hydrological features and the natural drainage pattern. The comment does not provide substantial evidence supporting a fair argument that the project would result in significant impacts to water quality, and the IS/MND's conclusions that impacts to water quality and hydrology would be less than significant are supported by substantial evidence. No further response or additional CEQA analysis is required.

**Comment D.30:** 4. Wildlife and Biological Impacts

Lastly, as for wildlife and biological impacts, the IS/MND discloses that the Project site may have various protected species but proposed inadequate mitigation measures, suffering from the same flaws as the traffic mitigation measures above. To name a few problems, the IS/MND acknowledges that the Project site may accommodate the western bumble bee, California tiger salamander, California red-legged frog, foothill yellow-legged frog, Swainson's hawk, bald eagle, least Bell's vireo, San Joaquin kit fox, burrowing owl, loggerhead shrike, San Francisco dusky-footed woodrats, and Townsend's big-eared bat, yet concludes that all are absent from the Site due to a lack of observance during the May 2022 field survey. IS/MND, p. 50. The IS/MND is silent on whether these species were observed at any point after May 2022. Additional site surveys must be completed prior to the Project's building phase to adequately determine whether and to what extent protected species may be present on the Site.

**Response D.30:** Contrary to the assertion in the comment, the IS/MND did not determine "...that the Project site may accommodate the western bumble bee, California tiger salamander, California red-legged frog, foothill yellow-legged frog,

Swainson's hawk, bald eagle, least Bell's vireo, San Joaquin kit fox, burrowing owl, loggerhead shrike, San Francisco dusky-footed woodrats, and Townsend's big-eared bat..." Page 50 of the IS/MND explicitly states that "(t)he project site either generally lacks suitable habitat for special-status wildlife species and/or the site is isolated from the nearest known population by development or unsuitable habitat..." and goes on to explain in detail why each of the species listed in the comment are unlikely to occur on the site, including the fact that none of these species were observed on the site during surveys completed by biologists. Additional site surveys, other than those identified in the IS/MND mitigation measures requiring pre-construction surveys for species determined to potentially occur on the site, are unwarranted since it has been established in the Biological Resources Report that the project site generally lacks suitable habitat for these special-status wildlife species and/or the site is isolated from the nearest known population. The comment does not provide substantial evidence supporting a fair argument that any of the species listed in the comment are present on the site or are likely to be present during construction activities. The IS/MND has disclosed the extent that there is the potential for special status species to be present on the site and included mitigation measures to ensure no impacts to special status species occur that would remain significant after mitigation. No further response or additional CEQA analysis is needed.

**Comment D.31:** Further, the IS/MND acknowledges that:

The only special-status wildlife species that can potentially breed or occur on or immediately adjacent to the project site are the Bay checkerspot butterfly, Crotch's bumble bee, yellow warbler, and white-tailed kite. Of these species, only the Bay checkerspot butterfly is covered under the Habitat Plan. During a survey conducted in April 2023, no Bay checkerspot butterfly adults or Crotch's bumble bees were observed. While the Bay checkerspot butterfly and Crotch's bumble bee are unlikely to be present, it is possible that individuals may occasionally forage or breed on the site and, therefore, the species cannot be deemed absent.

Id.

That the federally threatened Bay checkerspot butterfly and Crotch's bumble bee were not observed during a single survey conducted in April 2023 says little about whether the Site hosts or is suitable to host the Bay checkerspot butterfly, which live an average of just 10 days as adults, and emerge during a six-week period from late February to early May. The IS/MND acknowledges that "[w]hile the Bay checkerspot butterfly and Crotch's bumble bee are unlikely to be present, it is possible that individuals may occasionally forage or breed on the site and, therefore, the species cannot be deemed absent." Id.

The IS/MND provides that the "preparation of a Habitat Plan application for the project and payment of Habitat Plan impact fees (including the serpentine specialty fee) pursuant to the City's

standard permit condition would reduce impacts to the Bay checkerspot butterfly.” IS/MND, p. 59. The IS/MND is silent on the mechanism by which such measure will reduce impacts to the Bay checkerspot butterfly. Further, this measure defers mitigation in violation of CEQA.

**Response D.31:** The project applicant’s compliance with the Santa Clara Valley Habitat Plan (Habitat Plan) would reduce impacts on the Bay checkerspot butterfly by contributing the project’s required impact fees to the Habitat Plan’s conservation program, which includes numerous conservation measures focused on the conservation and recovery of the Bay checkerspot butterfly. The Habitat Plan’s conservation program (approved by the U.S. Fish and Wildlife Service and California Department of Fish and Wildlife) includes the preservation, enhancement, management, and monitoring of Bay checkerspot butterfly habitat. The goals of the conservation program include improving the viability of existing checkerspot populations, increasing the number of populations, and expanding the species’ geographic distribution. The type and amount of impact fees that Habitat Plan-covered projects need to pay were determined based on the anticipated impacts of Habitat Plan-covered projects; the type and amount of conservation that would need to be performed to not only reduce impacts on covered species to less than significant levels under CEQA, but also to contribute to the recovery of these species; and the costs of those conservation measures. Thus, by paying Habitat Plan impact fees in accordance with Habitat Plan requirements, the project applicant will be contributing its share of the funding to support landscape-scale conservation of this species. This approach does not inappropriately defer mitigation; rather, the conservation strategy, and conservation measures specific to the Bay checkerspot butterfly, are already well established, are well-described in the Habitat Plan, and are already being implemented for the benefit of this species. Further, the comment does not identify a new significant impact, nor does it provide substantial evidence supporting a fair argument that preparation of a Habitat Plan Application would not reduce impacts to the Bay checkerspot butterfly. Therefore, no further response or additional CEQA analysis is required.

**Comment D.32:** The MND’s mitigation measures for nesting raptors, other migratory birds, or Western burrowing owls are similarly inadequate, unenforceable, and illusory. MND, pp. 60-63.

**Response D.32:** The comment provides no details or support (i.e., substantial evidence) as to why the IS/MND’s mitigation measures for the noted species are inadequate, unenforceable, and illusory. The IS/MND acknowledges that the project’s ground disturbing activities including grading, construction activities, and tree removal during the nesting season could impact migratory birds and raptors, including the yellow warbler and white-tailed kite (refer to page 60 of the IS/MND). Impacts to western burrowing owls are not applicable considering the project site lacks suitable habitat for burrowing owls and the species is absent from the site as stated on page 50 of the IS/MND, and therefore the project would not be subject to any owl-related HCP fees or conditions. To reduce impacts to migratory birds and

raptors, mitigation measures MM BIO-2.1, MM BIO-2.2, MM BIO-2.3, and MM BIO-2.4 are required. These four mitigation measures, which are widely applied to construction projects during nesting season in compliance with state and federal laws described in the IS/MND, address impacts to nesting birds and raptors via actions that would minimize significant adverse impacts and that are within the powers of the lead agency to impose and enforce. If the project applicant cannot avoid the nesting season (MM BIO 2.1) then a nesting bird survey conducted by a qualified ornithologist would be required not more than seven days prior to the initiation of construction (MM BIO-2.2). If an active nest is found, then a construction free buffer zone would be established around the nest (MM BIO-2.3). The ornithologist's findings of the nesting bird surveys would then be reported to the Director of Planning, Building and Code Enforcement, or the Director's designee prior to issuance of any tree removal or grading permits. As described, these four mitigation measures for migratory birds and raptors are (1) feasible, (2) fully enforceable, and (3) include specific performance standards that the mitigation will achieve by including a timeline for implementation. Taken together, these four mitigation measures would ensure that the project would not disturb or impede nesting activity during the breeding season. The comment does not provide substantial evidence supporting a fair argument that the identified mitigation measures are inadequate to reduce impacts to nesting birds and raptors to a less than significant level. Therefore, no further response or additional CEQA analysis is required.

**Comment D.33:** In sum, the MND's findings of no impacts, including but not limited to impacts in air quality and GHG emissions, are clearly erroneous, and an EIR is required to not only disclose the Project's respective impacts, but also relate those to the adverse health impacts and impacts to the human beings that the Project may have. *Sierra Club v. County of Fresno* (2018) 6 Cal.5th 502. Further, the above-noted impacts to human beings, as well as the fact that the Project may have cumulative impacts with related projects, these impacts by themselves require mandatory findings of significance and the preparation of an EIR under CEQA Guidelines section 15065. The City's summary denial of such mandatory significance impacts is conclusory and unsupported, in light of the above-mentioned evidence.

**Response D.33:** The commenter states the project may have cumulative impacts but does not specifically comment about the IS/MND's discussion of cumulative conditions, how the project would contribute to cumulative conditions, or the measures included in the project to reduce any contribution to less than cumulatively considerable levels. Therefore, no substantial evidence is provided regarding the project's potential to contribute to cumulative impacts. Based on the above responses D.1 through D.32, the commenter did not identify any new or more significant impacts than those disclosed in the IS/MND. The IS/MND's conclusions for traffic, GHG emissions, air quality, hazards, water quality, biological resources, and noise are supported by substantial evidence and are valid under CEQA. The mitigation measures to reduce impacts related to traffic, hazards, and biological

resources are feasible, effective at reducing impacts below identified thresholds, and enforceable measures with specific performance standards and timelines for completion. These measures are also commonly employed for construction projects in San José and elsewhere throughout the region (i.e., there are no novel approaches proposed by the project to reduce identified impacts). Rather, all measures have been implemented for other projects and were able to achieve applicable performance standards. None of the comments present new information that has not been previously analyzed nor do they provide substantial evidence supporting a fair argument that the project would result in significant unavoidable impacts requiring preparation of an EIR.

**Comment D.34:** 5. Noise Impacts

The Project proposes to construct a one-story 121,850-square-foot industrial/manufacturing warehouse. IS/MND, p. 1. Yet, while the IS/MND ultimately concludes that the Project will have a less than significant impact on noise and therefore no mitigation is required (IS/MND, p. 10), the IS/MND fails to actually conduct any analysis of the Project’s potential noise impacts which would show that such impacts may occur. In fact, the Noise Assessment in Appendix G (“Noise Assessment”) of the IS/MND explicitly concludes that no mitigation is required with regards to each impact discussed.

Furthermore, where the Noise Assessment does find that there will be a significant noise impact, it relies on the Project’s “implementation of GP Policy EC-1.7, Municipal Code requirements, and the City’s Standard Permit Conditions” to conclude that the Project’s “temporary construction noise impacts would be reduced to a less-than-significant level.” However, it is improper for the IS/MND to merely rely on Applicant’s compliance with regulatory measures to conclude that the Project will have less than significant impacts for a number of reasons. For example, noise regulations do not capture all the noise impacts of the Project, including construction and operation. Moreover, the regulatory measures are not Project-specific and are focused on the Project itself—as such, they fail to consider issues specific to the Project, such as location, size, proposed mitigation measures, as well as the Project’s cumulative impacts along with other related projects. Further, the IS/MND’s traffic impacts are understated, and therefore traffic noise is understated and left unaccounted for. Thus, an EIR is required to study the Project’s noise impacts and to determine whether those will be significant.

As stated in CEQA, Guidelines section 15126.4(a)(1)(B), “[c]ompliance with a regulatory permit or other similar process may be identified as mitigation if compliance would result in implementation of measures that would be reasonably expected, based on substantial evidence in the record, to reduce the significant impact to the specified performance standards.” See also *Californians for Alternatives to Toxics v. Department of Food & Agric.* (2005) 136 Cal.App.4th 1 (the court set aside an EIR for a statewide crop disease control plan because it did not include an evaluation of the risks to the environment and human health from the proposed program but simply presumed that no adverse impacts would occur from use of pesticides in accordance with the registration and labeling program of the California Department of Pesticide Regulation); *Ebbetts Pass Forest Watch v Department of Forestry & Fire Protection* (2008) 43 Cal. App. 4th 936, 956 (fact that Department of

Pesticide Regulation had assessed environmental effects of certain herbicides in general did not excuse failure to assess effects of their use for specific timber harvesting project).

In addition, the Project's reliance on regulatory compliance with the referenced regulations is misplaced because there is no evidence that such ordinances were to control noise outside of the building's envelope, such as, for example, traffic noise or increase in ambient noises due to the Project's construction and operation. *California Clean Energy Committee v. City of Woodland* (2014) 225 Cal.App.4th 173, 210 (the building codes do not address the question of whether the Project is even safe to build, "whether a building should be constructed at all, how large it should be, where it should be located, whether it should incorporate certain resources, or anything else external to the building's envelope.")

Accordingly, there is a fair argument that the Project may have a significant noise impact and as such, the Project's potential noise impacts should be thoroughly analyzed and evaluated in an Environmental Impact Report pursuant to CEQA.

**Response D.34:** The comment makes general claims that the project should be considered to have significant noise impacts but does not mention the actual environmental setting for the project nor provide analysis based on any facts of the project's noise impacts during construction and once operational. The comment provides no substantial evidence to support its claims. The IS/MND's noise analysis is based on substantial evidence because it (1) specifically accounts for the noise environment on and around the project site, (2) identifies any noise-sensitive land uses in the vicinity, (3) calculates the project's construction and operational noise impacts, (4) applies objective thresholds based on the City's General Plan policies, and (5) quantifies noise impacts utilizing the objective thresholds<sup>16</sup>.

As identified on page 129 of the IS/MND and in the comment above, a Noise and Vibration Assessment was prepared by Illingworth & Rodkin, Inc., an air quality and acoustic consulting firm, in August 2022. All sources of noise from construction and operational activities were modeled and the estimated noise level increases were compared to thresholds of significance identified on page 135 and 136 of the IS/MND under Section 4.13.2.1 Thresholds of Significance. Estimated construction noise levels are shown in Table 4.13-3. Based on the computed noise levels, the exterior thresholds for industrial and residential land uses would not be exceeded during any phase of construction. Similarly, the approximate operational noise levels from project vehicle traffic (Table 4.13-4), mechanical equipment (Table 4.13-5), the parking lot (Table 4.13-6), and truck deliveries and loading (Table 4.13-7), were all modeled at the receiving property lines of existing noise-sensitive receptors, and the noise level increases were evaluated against the City's General Plan and Municipal Code thresholds for noise levels. Therefore, the less than significant impact

---

<sup>16</sup> CEQA itself does not specify what noise increases caused by a project must be treated as significant, as that is very much a context specific assessment.

determinations for construction and operational noise levels were all based on substantial evidence and are not reliant solely on compliance with regulatory requirements. Furthermore, the identified standard permit condition implementing General Plan Policy EC-1.7 and Municipal Code requirements for construction-related noise is required by the City of San José for all new development projects regardless if an impact is identified. For these reasons, the IS/MND's conclusions for noise impacts are valid, (i.e., consistent with the City's noise regulatory framework) and based on substantial evidence in the project-specific noise study that accounted for the project's noise environment and the potential noise generated from the construction and operational activities. Therefore, no further response or additional CEQA analysis is required and the preparation of an EIR is not warranted.

**Comment D.35:** III. The City Must, At the Very Least, Revise and Recirculate the IS/MND

Section 15073.5 of the CEQA Guidelines provides that a negative declaration must be recirculated whenever the document must be substantially revised. A substantial revision includes the identification of new, avoidable significant effects requiring mitigation measures or project revisions to be added to reduce the effect to less than significant levels or upon the agency determining that a proposed mitigation measure or project change would not reduce a potential impact to insignificance.

Additionally, when new information is brought to light showing that an impact previously discussed in an IS/MND and found to be insignificant with or without mitigation in the IS/MND's analysis has the potential for a significant environmental impact supported by substantial evidence, the IS/MND must consider and resolve the conflict in the evidence. See *Visalia Retail, L.P. v. City of Visalia* (2018) 20 Cal. App. 5th 1, 13, 17; see also *Protect the Historic Amador Waterways v. Amador Water Agency* (2004) 116 Cal. App. 4th 1099, 1109.

Here, in light of the IS/MND's failure to substantiate all of its findings, provide adequate mitigation measures, and fully assess all relevant factors, the Project requires significant revisions and resolution of conflicts in evidence. Therefore, at a minimum, the City must revise and recirculate the IS/MND if it does not prepare an EIR.

**Response D.35:** Recirculation of an IS/MND is required when the document must be substantially revised after public notice of its availability has been given prior to its adoption (Guidelines Section 15073.5(a)(b)) or when new substantial evidence significant comes to light that indicates the project may have a significant effect on the environment which cannot be mitigated or avoided (Guidelines Section 15073.5(d)). As discussed in the responses above, D.1 through D.34, to specific comments on the IS/MND, the comments raised in this letter do not identify any new or more significant impacts or mitigation measures considerably different than identified in the IS/MND. For these reasons, there is no need to disclose new information, as defined in the noted CEQA guidelines, and the IS/MND does not need to be recirculated.

**Comment D.36:** A. The IS/MND’s Project Description Is Insufficient

“[A]n accurate, stable and finite project description is the sine qua non of an informative and legally sufficient” environmental document. County of Inyo v. City of Los Angeles (1977) 71 Cal.App.3d 185, 200. “A curtailed or distorted project description may stultify the objectives of the reporting process” as an accurate, stable, and finite project description is necessary to allow “affected outsiders and public decisionmakers balance the proposal’s benefit against its environmental cost, consider mitigation measures, assess the advantage of terminating the proposal. Id. at 192-93.

Here, as a preliminary matter, the IS/MND is insufficient and requires revision given that it fails to specify the Project’s objective and intended usage. Rather, the MND provides that “the exact usage of the proposed building is yet to be determined, but would likely be utilized for industrial distribution, manufacturing, and/or research & development activities.” IS/MND at 1. Such lack of specification does not provide the public or City with a meaningful understanding of the intent of the Project and why it is warranted. The IS/MND must be revised to conclusively establish why the Project is needed and what exactly it intends to achieve before the City blanketly signs off on an unspecified industrial development.

**Response D.36:** The commenter inaccurately quotes text from the IS/MND. As stated on page 6 of the IS/MND, the actual text says “(w)hile a designated end user has not yet been determined for the project, the project is designed for a research and development (R&D) use.” For the purposes of the IS/MND the approximately 121,400 square foot industrial/manufacturing warehouse was analyzed as a research and development use, which is a land use type consistent with the Industrial Park General Plan designation and Industrial Park Zoning District consistent with the existing General Plan land use designation and zoning for the project site. A comprehensive description of the project is provided in Section 3.0 Project Description. The CEQA Guidelines also do not require that an Initial Study, Negative Declaration, or Mitigated Negative Declaration include a statement of project objectives. A statement of objectives for the proposed project is specific to Environmental Impact Reports pursuant with CEQA Guidelines Section 15124(b), as project objectives are crucial to development of alternatives in an EIR, which are not required for an IS/MND. Environmental impacts associated with the construction and operation of a research and development use were evaluated in the IS/MND to inform decisions makers. Accordingly, no revision to the IS/MND is warranted. No further response or additional CEQA analysis is required.

**Comment D.37:** B. The IS/MND Fails to Mitigate the Project’s Significant Impacts

If a project has a significant effect on the environment, an agency may approve the project only upon finding that it has “eliminated or substantially lessened all significant effects on the environment where feasible” and that any unavoidable significant effects on the environment are “acceptable due to overriding concerns.” CEQA Guidelines, § 15092, subs. (b)(2)(A)-(B).

CEQA mitigation measures proposed and adopted are required to describe what actions will be taken to reduce or avoid an environmental impact. CEQA Guidelines, § 15126.4, subd. (a)(1)(B) (providing “[f]ormulation of mitigation measures should not be deferred until some future time”). While the same Guidelines section 15126.5(a)(1)(B) acknowledges an exception to the rule against deferrals, such exception is narrowly proscribed to situations where it is impractical or infeasible to include those details during the project’s environmental review. Moreover, CEQA allows deferral of details of mitigation measures only “when it is impractical or infeasible to include those details during the project’s environmental review.” Id. CEQA further requires “that the agency (1) commits itself to the mitigation, (2) adopts specific performance standards the mitigation will achieve, and (3) identifies the type(s) of potential action(s) that can feasibly achieve that performance standard[.]” CEQA Guidelines, § 15126.4, subd. (a)(1)(B).

As discussed above, the Project fails to mitigate its significant impacts. Therefore, at minimum, the IS/MND must be revised or otherwise an EIR prepared.

**Response D.37:** As responded above in Responses D.1 through D.36, the IS/MND includes real, feasible, and fully enforceable mitigation measures for traffic, hazards and hazardous materials, and biological resources impacts. Specifically, mitigation measures MM TRAN-1.1, MM TRAN-1.2, MM HAZ-1.1, MM HAZ-1.2, MM BIO-2.1, MM BIO-2.2, MM BIO-2.3, and MM BIO-2.4 identify specific performance standards to reduce impacts to acceptable levels, whether based on qualitative or quantitative thresholds applied to the project given the site location and surrounding environment, and actions that would feasibly achieve these performance standards. There are no deferred mitigation measures in the IS/MND, as explained in detail in responses provided above where the commenter has alleged that a particular measure has been improperly deferred. No further response or additional CEQA analysis is required.

**Comment D.38:** IV. Conclusion

Based on the foregoing, the City should prepare an EIR for the Project given that there is a fair argument that the Project will result in significant environmental impacts. However, at the very least, the City must revise the IS/MND to address the aforementioned concerns. Should the City have any questions, it should feel free to contact this office.

**Response D.38:** Based on the above responses, the comments raised in this letter do not identify any new or more significant impacts or mitigation measures considerably different than identified in the IS/MND. No substantial evidence has been presented, in light of the whole record, that the project, with identified mitigation measures, may have a significant effect on the environment. Therefore, the City has determined that the conclusions in the IS/MND are valid, supported by substantial evidence, and preparation of an EIR is not warranted.

## Section 3.0 Draft IS/MND Text Revisions

---

This section contains revisions to the text of the 865 Embedded Way project IS/MND dated December 2023. Revised or new language is underlined. All deletions are shown with a ~~line through the text~~.

Page 10 Section 3.2.8, the text in the section is **REVISED** as follows:

### 3.2.8 Construction

The total construction period would be 10 months with construction beginning in 2024. The site is vacant and would not require demolition. Construction activities would include site preparation, grading, building construction, architectural coating, and paving. Approximately 18,000 cubic yards of soil would be imported during the grading phase. The maximum depth of excavation on-site would be 20 feet.

The project would ~~also complete~~ include utility work such as installation of a two inch water line (approximately 290 linear feet in length) and a 15 inch storm drain pipe (approximately 227 linear feet in length) in the project's driveway off Embedded Way. During excavation, the maximum depth of excavation on-site would be 20 feet. Additional utility work would include the relocation of 1.25-inch and three-inch Pacific Gas and Electric (PG&E) natural gas lines (currently located on the eastern portion of the site) to a new location within the site that is proposed for disturbance. The natural gas pipes could be relocated within the project site's proposed southern drive aisle.

The project would also comply with the City's Zero Waste Strategic Plan to enhance construction recycling.

Page 161 Section 4.17.2, the text of the mitigation measure MM TRAN-1.1 at the top of the page is **REVISED** as follows:

**MM TRAN-1.1:** Prior to issuance of ~~any~~ any ~~certificate of occupancy~~, the project applicant shall implement the following multi-modal infrastructure improvements to incentivize alternative modes of travel and reduce VMT generation for the site:

- ~~The project shall~~ Remove the pork-chop islands on the southwest and northwest corners of the Embedded Way and Hellyer Avenue intersection to improve pedestrian safety and access. This improvement shall require a signal modification at this intersection that shall include the relocation of signal poles, heads, and crosswalks.
- ~~The project shall~~ install raised median islands along Embedded Way consisting of a 120-foot segment at its western terminus and a 190-foot

segment near the Embedded Way and Hellyer Avenue intersection for traffic calming purposes.

The multi-modal infrastructure improvements shall be part of a Public Improvement Plan prepared by the project applicant that demonstrates how the multi-modal improvements will be implemented and the schedules for completing the improvements. Prior to issuance of any certificates of occupancy, the project applicant shall submit ~~the~~ Public Improvement Plan ~~shall be reviewed and approved by~~ to the Director of Public Works or the Director's designee. The implementation of the multi-modal improvements shall be verified by the Director of Public Works or the Director's designee for review and approval.

Page 161

Section 4.17.2, the VMT per employee listed in the paragraph in-between MM TRAN-1.1 and MM TRAN-1.2 is revised with the following **REMOVAL**:

The implementation of the multimodal infrastructure improvements described above would reduce the VMT generated by the industrial uses to 14.52 VMT per R&D employee and to ~~14.36~~ VMT per office employee which would both still be greater than the established impact thresholds in the City's Transportation Analysis Policy. The project's VMT could be reduced further with the implementation of Travel Demand Management (TDM) measures.

Page 162

Section 4.17.2 the VMT per employee identified before CEQA checklist question c) is **REVISED** as follows:

The implementation of MM TRAN-1.1 and MM TRAN-1.2 would reduce the project's VMT to ~~14.36~~ 12.34 VMT per employee for ~~R&D uses~~ warehouse uses and ~~12.18~~ 12.20 VMT per employee for office uses. The current regional average VMT for industrial employment uses is 14.37 per employee and for office uses the VMT threshold is 12.21 VMT per employee. Therefore, VMT would be below the regional average VMT thresholds and result in a less than significant impact for both potential uses of the proposed building. **(Less than Significant Impact with Mitigation Incorporated)**

Page 165

Section 4.17.2, the project trip generation rates shown in Table 4.17-1 are **REVISED** as follows:

**Table 4.17-1 Project Trip Generation**

Land Use	Project Size	Total Daily Rate	Total Daily Trips	AM Peak Trips			PM Peak Trips				
				Rate	In	Out	Total	Rate	In	Out	Total
Research and Development Location Based Reduction <sup>1</sup>	121,850 sf*	11.08	1,350	1.03	103	23	126	0.98	19	100	119
VMT-Based Reduction <sup>2</sup>			-68		-5	-1	-6		-1	-5	-6
<b>Project Trips After Reduction</b>			<b><u>1,269</u></b>		<b><u>97</u></b>	<b><u>22</u></b>	<b><u>119</u></b>		<b><u>18</u></b>	<b><u>94</u></b>	<b><u>112</u></b>

<sup>1</sup>A 5 percent reduction was applied based on the location-based vehicle mode share percentage outputs (Contained in Table 6 of the City’s TA Handbook) produced from the San Jose Travel Demand Model for the Place

<sup>2</sup>Existing and project VMTs were estimated using the City of San Jose VMT Evaluation Tool. It is assumed that every percent reduction in VMT per-employee (in this case 1.05 percent) is equivalent to one percent reduction in peak-hour vehicle trips.

\*At the time of analysis, the project had a larger square footage at 121,850 but the size of the project has since decreased to 121,400 square feet. The use of the larger square footage is a conservative approach.

Source: Hexagon Transportation Consultants, Inc. *Embedded Way Industrial Development Transportation Analysis*. October 2022/April 2023

Page 173 Section 4.19.1.2, the following text is **ADDED** before Section 4.19.2 Impact Discussion:

**Natural Gas and Electricity Facilities**

Existing underground natural gas lines are located on the eastern portion of the project site based on confidential maps provided by PG&E to the project applicant. A three-inch natural gas line connects to the adjacent industrial buildings east of the project site (875 Embedded Way and 5345 Hellyer Avenue). On the project site, the three-inch natural gas lines connects to a 1.25-inch natural gas line that is mapped within the proposed building footprint.

Page 175 Section 4.19.2 the following text is **ADDED** towards the end of page 175:

**Electric Power, Natural Gas, and Telecommunications**

The project would utilize existing connections for electrical and telecommunication systems. The project would relocate two existing natural gas lines (one 1.25-inch line and one three-inch line) currently located on the eastern portion of the site. The relocation would take roughly two weeks and would occur within the anticipated construction period of the overall project utilizing construction equipment already on site for other project construction activities, such as a backhoe and dump trucks. For relocation, the construction contractors for the project would dig a new trench for the natural gas pipelines to expose new tie in locations for the contractors to install the new pipelines. All exposed trenches would be backfilled post-relocation. While the final relocation area has not yet been determined because it requires further coordination with PG&E, the potential

locations being considered are all within the proposed development footprint of the project. As described in Section 3.2.8, a possible location would be to relocate the natural gas pipelines within the southern drive aisle. As a result, the relocation would not result in impacts different than those associated with the overall construction of the project. In the event PG&E determines that the pipelines must be relocated to an area outside the proposed construction footprint, additional environmental review would be required prior to issuance of any permits associated with the construction work related to the relocation effort.

Although the project would increase the demand on existing facilities in the City, relocation of existing natural gas lines or construction of new electrical, or telecommunication facilities would not be needed to serve the proposed project. As a result, the proposed project would have a less than significant impact on these facilities.

## Section 4.0 Conclusion

---

The comments received on the IS/MND did not raise any new issues about the project’s environmental impacts, provide substantial evidence in support of a fair argument the project’s impacts, following mitigation, would remain significant and unavoidable, or provide information indicating the project would result in new environmental impacts or impacts substantially greater in severity than disclosed in the IS/MND. Minor clarifications were added to the text of the IS/MND (refer to Section 3.0 Draft IS/MND Text Revisions). The text revisions do not constitute a “substantial revision” pursuant to CEQA Guidelines §15073.5 and recirculation of the MND is not required.

## **Appendix A: Comment Letters**

---

January 10, 2024

City of San Jose  
200 E. Santa Clara Street  
San Jose, CA 95113

Attn: Nhu Nguyen,  
By Email: [nhu.nguyen@sanjoseca.gov](mailto:nhu.nguyen@sanjoseca.gov)

Dear Nhu,

### **Comment A.1**

VTA appreciates the opportunity to comment on the IS/MND for the 865 Embedded Way Industrial Project. VTA has reviewed the document and has the following comments:

#### Coyote Creek Trail Access

Coyote Creek Trail is adjacent to the project site and is identified as a future [bicycle superhighway](#). These are high quality, uninterrupted, long-distance bikeways separated from motor vehicles that will allow people to travel quickly from city to city. The closest trail access is informally at the end of Embedded Way. VTA encourages the applicant to work with the City to formalize the access to Coyote Creek Trail with a trailhead and other amenities.

### **Comment A.2**

Bicycle Parking Given the proximity to Coyote Creek Trail, it is likely employees will use the trail to bike to work and/or during their breaks. Currently, the proposed project will only provide 25 short-term bicycle racks. VTA recommends providing long-term bicycle parking (e.g. bike lockers, bike cage, bike room) in addition to the short-term bicycle racks. [VTA's Bicycle Technical Guidelines](#) provide guidance for estimating the amount and the design of bicycle parking facilities. For industrial uses, VTA recommends long-term bike parking provided at a minimum of 1 space per 10,000 square feet or a goal of 1 space per 5,000 square feet.

### **Comment A.3**

TDM Program One proposed transportation mitigation measure is a Commute Trip Reduction Marketing/Education program to promote the use of transit, shared rides, and active transportation. VTA supports this marketing and education program but wants to note that current transit service options are not within walking distance of the project site. Resources are better used to promote shared rides and active transportation.

Thank you again for the opportunity to review this project. If you have any questions, please do not hesitate to contact me at (408) 321-5804 or [larissa.sanderfer@vta.org](mailto:larissa.sanderfer@vta.org).

Sincerely,

Larissa Sanderfer  
Transportation Planner II

TRIBAL ETHNO-HISTORIAN  
ALAN LEVENTHAL

TRIBAL HISTORIC  
PRESERVATION OFFICER  
PROF. MICHAEL WILCOX PhD

Dear Ms. Nguyen,

### Comment B.1

Thank you for contacting the Muwekma Ohlone Tribal Administration with regards to the proposed construction of a one-story 121,400 square foot industrial/manufacturing warehouse on a vacant 10.17-acre project site located at 865 Embedded Way in South San Jose (file # H22-022, ER22-113) [Assessor's Parcel No.: 679-01-020].

Based upon the information that was provided in your letter, stating that the

“City has performed an environmental review of the project. The environmental review examines the nature and extent of any adverse effects on the environment that could occur if the project is approved and implemented. Based on the review, the City has prepared a Draft Mitigated Negative Declaration (MND) for this project. An MND is a statement by the City that the project will not have a significant effect on the environment because the project will include mitigation measures that will reduce identified project impacts to a less than significant level.”

### Comment B.2

Based upon our Tribe's site sensitivity maps, it appears that the proposed project is located approximately [REDACTED] of one of our Tribe's ancestral heritage mortuary sites [REDACTED]; as well as [REDACTED] of two major ancestral burial sites [REDACTED] and [REDACTED] which yielded over 100 ancestral human remains (as some examples of nearby sites adjacent to Coyote Creek). Furthermore, the project is located approximately [REDACTED] t of [REDACTED] which when we worked on that project in 1983, the lower cultural components dated 9300 -9900 BP (before present), therefore, these sites are of great significance under CEQA and other Environmental laws.

### Comment B.3

As a result, given the proposed project's proximity to Coyote Creek, the Muwekma Ohlone tribal leadership is concerned that this demolition project which may indeed encounter unreported Tribal Cultural Resources, and therefore, we are formally recommending that the demolition, subsurface excavations, and related construction activities within subject project area be monitored by qualified archaeologists and a Muwekma Ohlone monitor during various stages of demolition, tree removal, and subsurface utilities excavations.

### Comment B.4

The Tribe's Cultural Resources arm is available to provide monitors and willingness to work along side with any Cultural Resources Management (CRM) firms that will be hired by the City or applicant to monitor this project.

**Comment B.5**

We make these recommendations based upon the recovery of several hundred ancestral remains recovered from site [REDACTED] which were discovered after the demolition of the old cannery at that location. Similar Mitigated Negative Declaration (MND) determinations by the City of San Jose Planning Department for the recent [REDACTED] also stated that the project will not have a significant effect on the tribal and cultural resources, even though our Tribe was involved in the removal of over 50 ancestral human remains at these two adjacent locations.

**Comment B.6**

We are including a copy of one of our archaeological projects conducted by our Tribe at [REDACTED] [REDACTED] as an example of our previous CRM work.

Thank you once again for contacting our Tribe and informing us of any and all City of San Jose construction projects as it relates to potential adverse impacts to our ancestral heritage sites/Tribal Cultural Resources as specified under AB 52.

Should you have any questions, please feel free to contact us.

On behalf of the Muwekma Ohlone Tribe of the San Francisco Bay Area,

Monica V. Arellano, Vice Chairwoman and MLD Tribal Representative

Re: H22-022 ER22-113 865 Embedded Way Industrial Project  
APN: 679-01-020

Dear Nhu Nguyen,

**Comment C.1**

Thank you for giving us the opportunity to review the subject plans. The proposed 865 Embedded Way Industrial Project is within the same vicinity of PG&E's existing 3" and 1 ¼" high pressure gas distribution facilities that impact this property.

The proposed 865 Embedded Way Industrial Project will require the relocation of existing PG&E gas service facilities. The applicant must contact the below resources to apply for the relocation of any existing PG&E gas services that exist on the subject parcels.

Please contact the Building and Renovation Center (BRSC) for facility map requests by calling 1-877-743-7782 and PG&E's Service Planning department at [www.pge.com/cco](http://www.pge.com/cco) for any modification or relocation requests, or for any additional services you may require.

As a reminder, before any digging or excavation occurs, please contact Underground Service Alert (USA) by dialing 811 a minimum of 2 working days prior to commencing any work. This free and independent service will ensure that all existing underground utilities are identified and marked on-site.

If you have any questions regarding our response, please contact me at [Brian.Callaghan@pge.com](mailto:Brian.Callaghan@pge.com).

Sincerely,

Brian Callaghan

**RE: City of San Jose's 865 Embedded Way Industrial Project (Project File Nos. H22-022, ER22-113)**

Dear Nhu Nguyen,

**Comment D.1**

On behalf of Carpenters Local Union 405 (“**Local 405**”) this office is submitting these comments on the Initial Study/Mitigated Negative Declaration (“**IS/MND**”) for the City of San Jose’s (“**City**”) 865 Embedded Way Industrial Project (“**Project**”).

The Project proposes a Site Development Permit (File No. H22-022) to allow the construction of a one-story, 121,400-square-foot industrial/manufacturing warehouse on a vacant 10.17-acre project site located at 865 Embedded Way in San Jose, California 95138 (APN 679-01-020) (“**Site**”). The Project also includes a connection to an existing 26-foot-wide drive aisle that extends from the eastern Embedded Way driveway through the adjacent eastern industrial property at 875 Embedded Way and currently terminates at the southeastern boundary of the Site. A total of 300 parking spaces would be provided in a surface parking lot surrounding the proposed building. The Project requires the removal of 11 trees on-site, two of which are ordinance-size.

Local 405 represents thousands of union carpenters in San Jose and has a strong interest in well-ordered land use planning and in addressing the environmental impacts of development projects. Individual members of Local 405 live, work, and recreate in the City and surrounding communities and would be directly affected by the Project’s environmental impacts.

Local 405 expressly reserves the right to supplement these comments at or prior to hearings on the Project, and at any later hearing or proceeding related to the Project. Gov. Code, § 65009, subd. (b); Pub. Res. Code, § 21177, subd. (a); see *Bakersfield Citizens for Local Control v. Bakersfield* (2004) 124 Cal.App.4th 1184, 1199-1203; see also *Galante Vineyards v. Monterey Water Dist.* (1997) 60 Cal.App.4th 1109, 1121.

Local 405 incorporates by reference all comments related to the Project or its California Environmental Quality Act (“**CEQA**”) review, including the IS/MND. See *Citizens for Clean Energy v. City of Woodland* (2014) 225 Cal.App.4th 173, 191 (finding that any party who has objected to the project’s environmental documentation may assert any issue timely raised by other parties).

Moreover, Local 405 requests that the City provide notice for any and all notices referring or related to the Project issued under CEQA (Pub. Res. Code, § 21000 *et seq.*) and the California Planning and Zoning Law (“**Planning and Zoning Law**”) (Gov. Code, §§ 65000-65010). California Public Resources Code sections 21092.2 and 21167(f) and California Government Code section 65092 require agencies to mail such notices to any person who has filed a written request for them with the clerk of the agency’s governing body.

**I. THE CITY SHOULD REQUIRE THE USE OF A LOCAL WORKFORCE TO BENEFIT THE COMMUNITY’S ECONOMIC DEVELOPMENT AND ENVIRONMENT.**

**Comment D.2**

The City should require that the Project be built by contractors who participate in a Joint Labor-Management Apprenticeship Program approved by the State of California and make a commitment to hiring a local workforce.

Community benefits such as local hire can also be helpful to reduce environmental impacts and improve the positive economic impact of the Project. Local hire provisions requiring that a certain percentage of workers reside within 10 miles or less of the Site can reduce the length of vendor trips, reduce greenhouse gas (“**GHG**”) emissions, and provide localized economic benefits. As environmental consultants Matt Hagemann and Paul E. Rosenfeld note:

[A]ny local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the

reduction would vary based on the location and urbanization level of the project site.

March 8, 2021, SWAPE Letter to Mitchell M. Tsai re Local Hire Requirements and Considerations for Greenhouse Gas Modeling.

Workforce requirements promote the development of skilled trades that yield sustainable economic development. As the California Workforce Development Board and the University of California, Berkeley Center for Labor Research and Education concluded:

[L]abor should be considered an investment rather than a cost—and investments in growing, diversifying, and upskilling California’s workforce can positively affect returns on climate mitigation efforts. In other words, well-trained workers are key to delivering emissions reductions and moving California closer to its climate targets.<sup>1</sup>

Furthermore, workforce policies have significant environmental benefits given that they improve an area’s jobs-housing balance, decreasing the amount and length of job commutes and the associated greenhouse gas (GHG) emissions. In fact, on May 7, 2021, the South Coast Air Quality Management District found that that the “[u]se of a local state-certified apprenticeship program” can result in air pollutant reductions.<sup>2</sup>

Locating jobs closer to residential areas can have significant environmental benefits. As the California Planning Roundtable noted in 2008:

People who live and work in the same jurisdiction would be more likely to take transit, walk, or bicycle to work than residents of less balanced communities and their vehicle trips would be shorter. Benefits would

<sup>2</sup> South Coast Air Quality Management District (May 7, 2021) Certify Final Environmental Assessment and Adopt Proposed Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions Program, and Proposed Rule 316 – Fees for Rule 2305, Submit Rule 2305 for Inclusion Into the SIP, and Approve Supporting Budget Actions, *available at* <http://www.aqmd.gov/docs/default-source/Agendas/Governing-Board/2021/2021-May7-027.pdf?sfvrsn=10>.

include potential reductions in both vehicle miles traveled and vehicle hours traveled.<sup>3</sup>

Moreover, local hire mandates and skill-training are critical facets of a strategy to reduce vehicle miles traveled (“**VMT**”). As planning experts Robert Cervero and Michael Duncan have noted, simply placing jobs near housing stock is insufficient to achieve VMT reductions given that the skill requirements of available local jobs must match those held by local residents.<sup>4</sup> Some municipalities have even tied local hire and other workforce policies to local development permits to address transportation issues. Cervero and Duncan note that:

In nearly built-out Berkeley, CA, the approach to balancing jobs and housing is to create local jobs rather than to develop new housing. The city’s First Source program encourages businesses to hire local residents, especially for entry- and intermediate-level jobs, and sponsors vocational training to ensure residents are employment-ready. While the program is voluntary, some 300 businesses have used it to date, placing more than 3,000 city residents in local jobs since it was launched in 1986. When needed, these carrots are matched by sticks, since the city is not shy about negotiating corporate participation in First Source as a condition of approval for development permits.

Recently, the State of California verified its commitment towards workforce development through the Affordable Housing and High Road Jobs Act of 2022, otherwise known as Assembly Bill No. 2011 (“**AB2011**”). AB2011 amended the Planning and Zoning Law to allow ministerial, by-right approval for projects being built alongside commercial corridors that meet affordability and labor requirements.

The City should consider utilizing local workforce policies and requirements to benefit the local area economically and to mitigate GHG emissions, improve air quality, and reduce transportation impacts.

## II. THE PROJECT WOULD BE APPROVED IN VIOLATION OF THE CALIFORNIA ENVIRONMENTAL QUALITY ACT.

### Comment D.3

#### A. Background Concerning the California Environmental Quality Act.

The California Environmental Quality Act is a California statute designed to inform decision-makers and the public about the potential significant environmental effects of a project. 14 California Code of Regulations (“**CEQA Guidelines**”), § 15002, subd. (a)(1).<sup>5</sup> At its core, its purpose is to “inform the public and its responsible officials of the environmental consequences of their decisions *before* they are made.” *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 564.

#### 1. *Background Concerning Environmental Impact Reports.*

CEQA directs public agencies to avoid or reduce environmental damage, when possible, by requiring alternatives or mitigation measures. CEQA Guidelines, § 15002, subs. (a)(2)-(3); see also *Berkeley Keep Jets Over the Bay Committee v. Board of Port Comes* (2001) 91 Cal.App.4th 1344, 1354; *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553; *Laurel Heights Improvement Assn.*, 47 Cal.3d at p. 400. The EIR serves to provide public agencies and the public in general with information about the effect that a proposed project is likely to have on the environment and to “identify ways that environmental damage can be avoided or significantly reduced.” CEQA Guidelines, § 15002, subd. (a)(2). If the project has a significant effect on the environment, the agency may approve the project only upon finding that it has “eliminated or substantially lessened all significant effects on the environment where feasible” and that any unavoidable significant effects on the environment are “acceptable due to overriding concerns” specified in Public Resources Code section 21081. See CEQA Guidelines, § 15092, subs. (b)(2)(A)-(B).

While the courts review an EIR using an ‘abuse of discretion’ standard, the reviewing court is not to *uncritically* rely on every study or analysis presented by a project proponent in support of its position. *Berkeley Jets*, 91 Cal.App.4th at p. 1355 (quoting *Laurel Heights Improvement Assn.*, 47 Cal.3d at pp. 391, 409 fn. 12) (internal quotations omitted). A clearly inadequate or unsupported study is entitled to no judicial

---

<sup>5</sup> The CEQA Guidelines, codified in Title 14 of the California Code of Regulations, section 15000 et seq., are regulatory guidelines promulgated by the state Natural Resources Agency for the implementation of CEQA. Cal. Pub. Res. Code, § 21083. The CEQA Guidelines are given “great weight in interpreting CEQA except when . . . clearly unauthorized or erroneous.” *Center for Biological Diversity v. Dept. of Fish & Wildlife* (2015) 62 Cal.4th 204, 217.

deference. *Id.* Drawing this line and determining whether the EIR complies with CEQA’s information disclosure requirements presents a question of law subject to independent review by the courts. *Sierra Club v. County of Fresno* (2018) 6 Cal.5th 502, 515; *Madera Oversight Coalition, Inc. v. County of Madera* (2011) 199 Cal.App.4th 48, 102, 131. As the court stated in *Berkeley Jets*, prejudicial abuse of discretion occurs if the failure to include relevant information precludes informed decision-making and informed public participation, thereby thwarting the statutory goals of the EIR process. 91 Cal.App.4th at p. 1355 (internal quotations omitted).

The preparation and circulation of an EIR is more than a set of technical hurdles for agencies and developers to overcome. *Communities for a Better Environment v. Richmond* (2010) 184 Cal.App.4th 70, 80 (quoting *Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova* (2007) 40 Cal.4th 412, 449-450). The EIR’s function is to ensure that government officials who decide to build or approve a project do so with a full understanding of the environmental consequences and, equally important, that the public is assured those consequences have been considered. *Id.* For the EIR to serve these goals it must present information so that the foreseeable impacts of pursuing the project can be understood and weighed, and the public must be given an adequate opportunity to comment on that presentation before the decision to go forward is made. *Id.*

A strong presumption in favor of requiring preparation of an EIR is built into CEQA. This presumption is reflected in what is known as the “fair argument” standard under which an EIR must be prepared whenever substantial evidence in the record supports a fair argument that a project may have a significant effect on the environment. *Quail Botanical Gardens Found., Inc. v. City of Encinitas* (1994) 29 Cal.App.4th 1597, 1602; *Friends of “B” St. v. City of Hayward* (1980) 106 Cal.3d 988, 1002.

The fair argument test stems from the statutory mandate that an EIR be prepared for any project that “may have a significant effect on the environment.” PRC, § 21151; see *No Oil, Inc. v. City of Los Angeles* (1974) 13 Cal.App.3d 68, 75; accord *Jensen v. City of Santa Rosa* (2018) 23 Cal.App.5th 877, 884. Under this test, if a proposed project is not exempt and may cause a significant effect on the environment, the lead agency must prepare an EIR. PRC, §§ 21100 (a), 21151; CEQA Guidelines, § 15064 (a)(1), (f)(1). An EIR may be dispensed with only if the lead agency finds no substantial evidence in the initial study or elsewhere in the record that the project may have a significant effect on the environment. *Parker Shattuck Neighbors v. Berkeley City Council* (2013) 222

Cal.App.4th 768, 785. In such a situation, the agency must adopt a negative declaration. PRC, § 21080, subd. (c)(1); CEQA Guidelines, §§ 15063 (b)(2), 15064(f)(3).

“Significant effect upon the environment” is defined as “a substantial or potentially substantial adverse change in the environment.” PRC, § 21068; CEQA Guidelines, § 15382. A project may have a significant effect on the environment if there is a reasonable probability that it will result in a significant impact. *No Oil, Inc.*, 13 Cal.3d at p. 83 fn. 16; see *Sundstrom v. County of Mendocino* (1988) 202 Cal.App.3d 296, 309. If any aspect of the project may result in a significant impact on the environment, an EIR must be prepared even if the overall effect of the project is beneficial. CEQA Guidelines, § 15063(b)(1); see *County Sanitation Dist. No. 2 v. County of Kern* (2005) 127 Cal.App.4th 1544, 1580.

This standard sets a “low threshold” for preparation of an EIR. *Consolidated Irrigation Dist. v. City of Selma* (2012) 204 Cal.App.4th 187, 207; *Nelson v. County of Kern* (2010) 190 Cal.App.4th 252; *Pocket Protectors v. City of Sacramento* (2004) 124 Cal.App.4th 903, 928; *Bowman v. City of Berkeley* (2004) 122 Cal.App.4th 572, 580; *Citizen Action to Serve All Students v. Thornley* (1990) 222 Cal.App.3d 748, 754; *Sundstrom*, 202 Cal.App.3d at p. 310. If substantial evidence in the record supports a fair argument that the project may have a significant environmental effect, the lead agency must prepare an EIR even if other substantial evidence before it indicates the project will have no significant effect. See *Jensen*, 23 Cal.App.5th at p. 886; *Clews Land & Livestock v. City of San Diego* (2017) 19 Cal.App.5th 161, 183; *Stanislaus Audubon Society, Inc. v. County of Stanislaus* (1995) 33 Cal.App.4th 144, 150; *Brentwood Assn. for No Drilling, Inc. v. City of Los Angeles* (1982) 134 Cal.App.3d 491; *Friends of “B” St.*, 106 Cal.App.3d 988; CEQA Guidelines, § 15064(f)(1).

**Comment D.4<sup>2</sup>**      *Background Concerning Initial Studies, Negative Declarations and Mitigated Negative Declarations.*

CEQA and CEQA Guidelines are strict and unambiguous about when an MND may be used. A public agency must prepare an EIR whenever substantial evidence supports a “fair argument” that a proposed project “may have a significant effect on the environment.” Pub. Res. Code, §§ 21100, 21151; CEQA Guidelines, §§ 15002, subds. (f)(1)-(2), 15063; *No Oil, Inc.*, 13 Cal.3d at p. 75; *Communities for a Better Environment v. California Resources Agency* (2002) 103 Cal.App.4th 98, 111-112.

Essentially, should a lead agency be presented with a fair argument that a project may have a significant effect on the environment, the lead agency shall prepare an EIR even though it may also be presented with other substantial evidence that the project will not have a significant effect. CEQA Guidelines, §§ 15064, subds. (f)(1)-(2); see *No Oil Inc., supra*, 13 Cal.3d at p. 75 (internal citations and quotations omitted). Substantial evidence includes “enough relevant information and reasonable inferences from this information that a fair argument can be made to support a conclusion, even though other conclusions might also be reached.” CEQA Guidelines, § 15384(a).

The fair argument standard is a “low threshold” test for requiring the preparation of an EIR. *No Oil Inc., supra*, 13 Cal.3d at p. 84; *County Sanitation Dist. No. 2 of Los Angeles County v. County of Kern* (2005) 127 Cal.App.4th 1544, 1579. It “requires the preparation of an EIR where there is substantial evidence that any aspect of the project, either individually or cumulatively, may cause a significant effect on the environment, regardless of whether the overall effect of the project is adverse or beneficial[.]” *County Sanitation, supra*, 127 Cal.App.4th at p. 1580 (quoting CEQA Guidelines, § 15063(b)(1)). A lead agency may adopt an MND only if “there is no substantial evidence that the project will have a significant effect on the environment.” CEQA Guidelines, § 15074(b).

Evidence supporting a fair argument of a significant environmental impact triggers preparation of an EIR regardless of whether the record contains contrary evidence. *League for Protection of Oakland’s Architectural and Historical Resources v. City of Oakland* (1997) 52 Cal.App.4th 896, 904-905. “Where the question is the sufficiency of the evidence to support a fair argument, deference to the agency’s determination is not appropriate[.]” *County Sanitation*, 127 Cal.App.4th at 1579 (quoting *Sierra Club v. County of Sonoma* (1992) 6 Cal.App.4th 1307, 1317-1318).

Further, it is the duty of the lead agency, not the public, to conduct the proper environmental studies. “The agency should not be allowed to hide behind its own failure to gather relevant data.” *Sundstrom*, 202 Cal.App.3d at p. 311. “Deficiencies in the record may actually enlarge the scope of fair argument by lending a logical plausibility to a wider range of inferences.” *Id.*; see also *Gentry v. City of Murrieta* (1995) 36 Cal.App.4th 1359, 1382 (lack of study enlarges the scope of the fair argument which may be made based on the limited facts in the record).

Thus, refusal to complete recommended studies lowers the already low threshold to establish a fair argument. The court may not exercise its independent judgment on the

omitted material by determining whether the ultimate decision of the lead agency would have been affected had the law been followed. *Environmental Protection Information Center v. Cal. Dept. of Forestry* (2008) 44 Cal.4th 459, 486 (internal citations and quotations omitted). The remedy for this deficiency would be for the trial court to issue a writ of mandate. *Id.*

Both the review for failure to follow CEQA's procedures and the fair argument test are questions of law, thus, the de novo standard of review applies. *Vineyard Area Citizens for Responsible Growth v. City of Rancho Cordova* (2007) 40 Cal.4th 412, 435.

“Whether the agency’s record contains substantial evidence that would support a fair argument that the project may have a significant effect on the environment is treated as a question of law. *Consolidated Irrigation Dist.*, 204 Cal.App.4th at p. 207; Kostka and Zischke, *Practice Under the Environmental Quality Act* (2017, 2d ed.) at § 6.76.

In an MND context, courts give no deference to the agency. Additionally, the agency or the court should not weigh expert testimony or decide on the credibility of such evidence—this is one of the EIR’s functions. As stated in *Pocket Protectors v. City of Sacramento* (2004):

Unlike the situation where an EIR has been prepared, neither the lead agency nor a court may “weigh” conflicting substantial evidence to determine whether an EIR must be prepared in the first instance. Guidelines section 15064, subdivision (f)(1) provides in pertinent part: if a lead agency is presented with a fair argument that a project may have a significant effect on the environment, the lead agency shall prepare an EIR even though it may also be presented with other substantial evidence that the project will not have a significant effect. Thus, as *Claremont* itself recognized, [c]onsideration is not to be given contrary evidence supporting the preparation of a negative declaration.

124 Cal.App.4th 903, 935 (internal citations and quotations omitted).

In cases where it is not clear whether there is substantial evidence of significant environmental impacts, CEQA requires erring on the side of a “preference for resolving doubts in favor of environmental review.” *Mejia v. City of Los Angeles* (2005) 130 Cal.App.4th 322, 332. “The foremost principle under CEQA is that the Legislature intended the act to be interpreted in such manner as to afford the fullest

possible protection to the environment within the reasonable scope of the statutory language. *Friends of Mammoth v. Board of Supervisors* (1972) 8 Cal.3d 247, 259.

**Comment D.5**

As explained below, the IS/MND fails to make certain essential findings. Further, for a number of findings that the IS/MND does make, it fails to support such findings with sufficient analysis and substantial evidence, or it fails to incorporate adequate mitigation measures. Therefore, there is a fair argument that the Project will have a significant effect on the environment, triggering the “low threshold” standard for preparation of an EIR.

B. There Is a Fair Argument that the Project May Have a Significant Traffic Impact.

**Comment D.6**

The very nature of the Project—a 121,400-square-foot building with 300 parking spaces on roughly 10 acres of land—indicates that it may have significant and severe traffic impacts, thus requiring the preparation of an EIR. This is further supported by the fact that the Project will generate an estimated 1,350 net daily trips per the Institute of Transportation Engineers (“ITE”) *Trip Generation Manual*, 11th Edition (2021). IS/MND, pp. 163-164.<sup>6</sup>

**Comment D.7**

Furthermore, the IS/MND acknowledges that the Project’s daily Vehicle Miles Traveled (“VMT”) would be 15.12 per industrial employee, which exceeds the City’s VMT Evaluation Tool’s industrial threshold of 14.37 daily VMT per worker:

The proposed Research & Development project, which would support both office and industrial uses, would have 15.12 vehicles miles traveled (VMT) per industrial employee which would exceed the 14.37 VMT per industrial employees and would have 14.95 VMT per office employee which would exceed the 12.21 VMT per office employee threshold.

IS/MND, pp. 10, 160.

Thus, the IS/MND admits that the project’s generated VMT would exceed the significance threshold for industrial employment and therefore result in a significant transportation impact on VMT. *Id.*

To dispose of the need to prepare an EIR, the IS/MND relies on mitigation measure MM TRAN-1.1 to support its contention that the Project would have a less than

<sup>6</sup> The IS/MND contends that, after “all applicable trip reductions and credits,” the Project would generate a “net new total of 1,269 additional daily trips.” IS/MND, p. 164.

significant impact with mitigation incorporated as it pertains to CEQA Guidelines Section 15064.3 and its required VMT evaluation of a project's transportation impacts. IS/MND, p. 161. Yet, mitigation measure MM TRAN-1.1 is inadequate for an EIR, given that it is unenforceable, illusory, and infeasible. It also improperly delegates the City's affirmative duty to ensure the reduction of traffic impacts onto the Project's Applicant and further improperly delegates the approval of any traffic mitigation plans to the City's Public Works department, rather than the elected decision-makers. MM TRAN-1.1 also improperly defers mitigation.

Specifically, mitigation measure MM TRAN-1.1 states:

MM TR-1.1: Prior to the issuance Certificate of Occupancy, the project shall implement the following multi-modal infrastructure improvements to incentivize alternative modes of travel and reduce VMT generation for the site:

- The project shall remove the pork-chop islands on the southwest and northwest corners of the Embedded Way and Hellyer Avenue intersection to improve pedestrian safety and access. This improvement shall require a signal modification at this intersection that shall include the relocation of signal poles, heads, and crosswalks.
- The project shall install raised median islands along Embedded Way consisting of a 120-foot segment at its western terminus and a 190-foot segment near the Embedded Way and Hellyer Avenue intersection for traffic calming purposes.

The multi-modal infrastructure improvements shall be part of a Public Improvement Plan that demonstrates how the multi-modal improvements will be implemented and the schedules for completing the improvements. The Public Improvement Plan shall be reviewed and approved by the Director of Public Works or the Director's designee. The implementation of the multimodal improvements shall be verified by the Director of Public Works or the Director's designee.

The implementation of the multimodal infrastructure improvements described above would reduce the VMT generated by the industrial uses to 14.52 VMT per R&D employee and to 114.36 [sic] VMT per office employee which would both still be greater than the established impact

thresholds in the City's Transportation Analysis Policy. The project's VMT could be reduced further with the implementation of Travel Demand Management (TDM) measures.

*Id.*

As can be evinced from the above-quoted IS/MND statements, the proposed plans are aimed to reduce *industrial* and *employee* VMT, yet, critically, the VMT "would still be greater than the established impact thresholds in the City's Transportation Analysis Policy." Mitigation measure MM-TRAN-1.1 then concludes that "[t]he project's VMT could be reduced further with the implementation of Travel Demand Management (TDM) measures." *Id.*

Specifically, MM-TRAN-1.2 states:

Prior to the issuance of the Planning Site Development Permit, the project applicant shall submit a final TDM Plan, approved by the Director of Department of Public Works or Director's designee and the Director of Planning, Building and Code Enforcement, or Director's designee, that shall include implementation of the following TDM measures to reduce the project's VMT.

- Commute Trip Reduction Marketing/Education: Implement marketing/educational campaigns that promote the use of transit, shared rides, and travel through active modes for 25 percent of the project employees. Strategies may include the incorporation of alternative commute options into new employee orientations, event promotions, and publications.
- Subsidize Vanpool: Provide subsidies for individuals forming new vanpools for their commute. This encourages the use of vanpools, reducing drive-alone trips, and thereby reducing VMT. The project shall be required to subsidize 100 percent of the cost of the vanpool and achieve at least 25 percent employee participation.

The TDM plan shall be submitted to the Director of Public Works or Director's designee and the Director of Planning, Building and Code Enforcement or the Director's designee and shall include a trip cap for VMT monitoring purposes. The trip cap shall be prepared by a traffic

engineer. The monitoring shall be based on annual trip generation counts that demonstrate the vehicle trips generated by the project are within 10 percent of an established peak hour trip cap that is prepared by a traffic engineer. The annual trip monitoring reports shall be submitted that demonstrate that project-generated VMT is below the significance threshold. If the annual trip monitoring report finds that the project is exceeding the established trip cap, the project shall be required to submit a follow-up report that demonstrates compliance with the trip cap requirements within a period not to exceed six months.

IS/MND, pp. 161-162.

The IS/MND concludes that, through the implementation of both MM TRAN-1.1 and MM TRAN-1.2, the Project's VMT would be reduced to 14.36 per employee for research and development (R&D) uses and 12.18 per employee for office uses.

IS/MND, p. 162.

**Comment D.8**  
First, the proposed mitigation measures are illusory given they only require that the Project Applicant submit plans at some future point which the City may then review. These measures further place the burden on the Applicant to "ensure" that the proposed changes result in a reduction of VMT. Simply put, there is no definitive and measurable commitment to mitigation at all. Even under the EIR-related CEQA Guidelines section 15126.4(a)(1)(B), this is improper since, *inter alia*, the City does not commit to mitigation but rather relies on the applicant to mitigate.

**Comment D.9**  
Second, the proposed mitigation measures are illusory because of their timing (i.e., prior to the issuance of the Certificate of Occupancy and the Planning Site Development Permit) and they do not provide for any *discretionary approval* or hearing. As related, the proposed mitigation measures provide for "approval" of plans regarding multi-modal infrastructure improvements which *may* incentivize alternative modes of travel, and such approval will be by the Public Works department, apparently without any public hearing.

**Comment D.10**  
Third, the proposed mitigation measures improperly and speculatively conclude that they will *necessarily* reduce the traffic impacts to a sufficient level of significance without any assurances, figures, or evidence. The IS/MND fails to offer any evidence showing that Applicant's removal of the pork-chop islands on the southwest and northwest corners of the Embedded Way and Hellyer Avenue and installation of

raised median islands along Embedded Way will reduce VMT from 15.12 to 14.52 per industrial employee and 14.95 to 14.36 per office employee. IS/MND, pp. 160-161. Further, the IS/MND fails to offer evidence showing that commute trip reduction marketing techniques, worker education, and vanpool subsidies will so successfully incentivize alternative commute options and promote employee participation to such a degree that VMT will be further reduced from 14.52 to 14.37 for industrial employees and 14.36 to 12.21 for office employees. IS/MND, pp. 161-162.

**Comment D.11**

Fourth, based on these mitigation measures, it is the Public Works department, if at all, that will be making the finding that the Project's mitigation plans, as proposed by the Applicant, will indeed reduce traffic impacts to the requisite level of insignificance. This violates CEQA's non-delegation provision. See CEQA Guidelines, § 15025, subd. (b)(2) (Delegation of Responsibilities).

**Comment D.12**

Fifth, the mitigation measures are infeasible and illusory given that they are based on the speculation and assumption that the Project's *employees* will be so motivated and incentivized as to adopt alternative commuting options to get to the Site. There are no assurances that employees will indeed do so. The measures also propose to *add* and *remove* components of nearby roads to "to improve pedestrian safety and access" and "for traffic calming purposes." IS/MND, p. 161. Yet, at the same time, the IS/MND elsewhere acknowledges that the Project site will attract heavy-duty trucks: "Based on the 12 truck loading docks, it was assumed that the project would generate 24 trucks or 48 truck trips daily." IS/MND, pp. 38-39. The IS/MND further states that "[a]ll trucks were assumed to be heavy-duty diesel-powered trucks and a source of long-term [diesel particulate matter] emissions." *Id.* The IS/MND then contends that "[t]hese trucks would travel to and from the site and are anticipated to idle at loading docks for 5 minutes for each trip." IS/MND, p. 39.

It is also reasonably foreseeable that employees will not choose to ride bikes or walk to the Project Site at a minimum due to the road safety concerns as well as concerns about being exposed to a high level of diesel emissions and air and GHG impacts from such heavy trucks on the road and regularly visiting the Site. CEQA requires that in such cases of doubt, the agency should resolve such issues in favor of an EIR. *Nelson v. County of Kern* (2010) 190 Cal.App.4th 252, 282.

The above-noted and critical flaws violate CEQA's standard for IS/MNDs under Public Resources Code section 21064.5 to show that:

**Comment D.13**

(1) [R]evisions in the project plans or proposals made by, or agreed to by, the applicant before the proposed negative declaration and initial study are released for public review would avoid the effects or mitigate the effects to a point where clearly no significant effect on the environment would occur, and (2) there is no substantial evidence in light of the whole record before the public agency that the project, as revised, may have a significant effect on the environment.

Clearly, here, the Project may have significant effects on the environment at least in the context of traffic.

**Comment D.13**

Sixth, the proposed mitigation measures are improperly deferred and vague as they defer the formulation of mitigation measures or final design thereof to a later time, shift that burden to the Applicant, and further do not adequately explain how removing the pork-chop islands or installing raised median islands will improve pedestrian safety and calm traffic to such a degree that such measures will “clearly” reduce VMT to the requisite level of insignificance, as required for an IS/MND.

**Comment D.14**

As stated previously, the IS/MND fails to meet CEQA’s pre-conditions and requirements even in the case of an EIR. CEQA forbids deferred mitigation. CEQA Guidelines, § 15126.4, subd. (a)(1)(B). CEQA allows deferral of details of mitigation measures only “when it is impractical or infeasible to include those details during the project’s environmental review.” **Comment D.30** CEQA further requires that the lead agency:

(1) [C]ommits itself to the mitigation, (2) adopts specific performance standards the mitigation will achieve, and (3) identifies the type(s) of potential action(s) that can feasibly achieve that performance standard[.]

CEQA Guidelines, § 15126.4, subd. (a)(1)(B).

Here, the City failed each of these preconditions and requirements, as the IS/MND fails to show why the development of the traffic calming plans or pedestrian improvements could not be developed before the issuance of the IS/MND, what impacts they will have individually or cumulatively, if such plans would indeed be feasible, and the specific performance criteria that Applicant will have to meet.

Moreover, as noted previously, the City clearly did not commit to mitigation, since all it would do, per the mitigation measures, is review and approve Applicant’s proposed plans.

**Comment D.15.** Furthermore, mitigation measure MM TRAN-1.1 relies on some future coordination with other public entities aside from the City to implement the measure and does not show how it will be enforced nor what the outcome will be. **Comment D.16** For example, there is no requirement that Applicant report the number of employee trips after the pork-chop islands are removed and median islands installed or to ensure that the VMT's are indeed reduced to the requisite level of insignificance such that an IS/MND would suffice to bring the Project in compliance with CEQA. Yet again, this mitigation measure fails to explain how simply encouraging pedestrian travel will actually discourage vehicle travel and thus cause an actual decrease in VMT resulting from the Project and thus result in a less than significant impact on traffic and transportation.

**Comment D.17** The foregoing measure is impermissibly vague and improperly defers the actual reduction in VMT to some later unspecified date without showing *how* these proposed measures would reduce VMT.

**Comment D.18:** Yet another flaw in the City's traffic impact analysis is its reliance on Senate Bill 743 ("SB 743") to disregard traffic congestion. The City claims it provides a level of service analysis for information purposes only. IS/MND, p. 164. And yet, SB 743 on its face does not apply to *industrial* projects here, but rather to commercial and residential projects only. Further, the IS/MND fails to include an Intersection Level of Service, as is required under existing, background, and background plus project conditions, yet the City claims the traffic impacts will be less than significant despite that certain intersection levels may worsen after implementation of the Project.

**Comment D.19** Finally, also given that construction of the Project itself may result in road closures and detours, there is a fair argument that the Project may have significant traffic impacts which should be assessed in an EIR pursuant to CEQA.

**Comment D.20** For the reasons set forth above, the IS/MND fails to prove that the Project's traffic impacts will be mitigated to a less than significant level with the incorporation of the proposed mitigation measures. In fact, the IS/MND shows the opposite, necessitating the preparation of an EIR.

**Comment D. 21**  
C. There Is a Fair Argument that the Project May Have Significant Air Quality, GHG Emission, Water, Noise, Hazards, Human Health, and Wildlife/Biological Impacts, and Cumulative Impacts, Requiring Mandatory Findings of Significance and the Preparation of an EIR.

**Comment D.22**

Given that the Project may have significant traffic impacts that are not accurately disclosed or mitigated against in the IS/MND, then its traffic-related impacts are also derivatively understated and may be significant, thereby requiring the preparation and circulation of an EIR.

There is an acknowledged direct correlation between the increase in traffic impacts and an increase in the associated air quality, GHG emission, and noise impacts. See e.g., *City of Redlands v. County of San Bernardino* (2002) 96 Cal.App.4th 398, 413 (“it is reasonable to assume” that a project enabling physical residential development would have reasonably foreseeable indirect air and other impacts).

As stated in the Office of Planning Research’s (“**OPR**”) technical advisory in 2018:

VMT and Greenhouse Gas Emissions Reduction. Senate Bill 32 (Pavley, 2016) requires California to reduce greenhouse gas (GHG) emissions 40 percent below 1990 levels by 2030, and Executive Order B-16-12 provides a target of 80 percent below 1990 emissions levels for the transportation sector by 2050. The transportation sector has three major means of reducing GHG emissions: increasing vehicle efficiency, reducing fuel carbon content, and reducing the amount of vehicle travel.

Similarly, there is an acknowledged nexus between the increase in traffic and in related air quality, GHG impacts, noise, water/flooding impacts, and impacts on human health and the natural environment, including wildlife and waterways. As described in the 2018 OPR Technical advisory:

VMT and Other Impacts to Health and Environment. VMT mitigation also creates substantial benefits (sometimes characterized as “co-benefits” to GHG reduction) in both in the near-term and the long-term. Beyond GHG emissions, increases in VMT also impact human health and the natural environment. Human health is impacted as increases in vehicle travel lead to more vehicle crashes, poorer air quality, increases in chronic diseases associated with reduced physical activity, and worse mental health. Increases in vehicle travel also negatively affect other road users, including pedestrians, cyclists, other motorists, and many transit users. The natural environment is impacted as higher VMT leads to more collisions with wildlife and fragments habitat. Additionally, development that leads to more vehicle travel also tends to consume more energy,

water, and open space (including farmland and sensitive habitat). This increase in impermeable surfaces raises the flood risk and pollutant transport into waterways.

As such, there is a fair argument that the Project here may have significant GHG emissions, air quality, energy, water, noise and other impacts, including impacts on human beings and the natural environment.

1. *GHG Emissions and Air Quality Impacts*

**Comment D.23**

The IS/MND ultimately concludes that the Project will have a less than significant impact with regards to GHG emissions based only on the contention that “Project construction would occur over a period of approximately 10 months and would result in the release of 140 MTCO<sub>2</sub>e.” IS/MND, p. 99. The IS/MND then contends that the Project construction activity and resulting GHG emissions “would not interfere with the implementation of Senate Bill 32. *Id.*”

The IS/MND completely fails to analyze, to any degree sufficient to constitute compliance with CEQA, the Project’s potential GHG emissions impacts, and instead offers a conclusory statement that because construction emissions would occur over a certain period and result in a certain tonnage of CO<sub>2</sub>, that the Project will not result in a significant impact with regards to GHG emissions. Consequently, the IS/MND requires substantial revisions or an EIR must be prepared.

**Comment D.24**

In terms of the Project’s operational emissions, the IS/MND too heavily depends on the Project’s consistency with the General Plan land use designation for the Site and planned growth from build out of the General Plan and that “the project’s GHG emissions are accounted for in the citywide GHG emissions inventory addressed in the GHGRS, *provided the project complies with applicable GHG reduction measures identified in the GHGRS.*” IS/MND, p. 99. The IS/MND’s reliance on the Project’s consistency with the City’s 2030 GHG Reduction Strategy (“**GHGRS**”), i.e., the hope that the Project “complies with applicable GHG reduction measures,” cannot constitute as mitigation nor a determination that the Project will have less than significant impacts for purposes of CEQA compliance.

The IS/MND concludes that the Project will have less than significant GHG emissions impacts due to the Project’s adoption of certain measures of the GHGRS, including consistency with the Land Use/Transportation Diagram designation of the General Plan and enrollment in the SJCE TotalGreen program. IS/MND, p. 100.

According to the IS/MND, the Project will be designed and constructed in compliance with the City of San Jose Council Policy 6-32, the City’s reach code, and the City’s Green Building Ordinance. IS/MND, p. 101. However, the Project’s mere implementation of GHG reduction strategies, compliance with city initiatives, and reliance on regulations is insufficient to conclude that the Project will have less than significant GHG emissions impacts, as these measures are not specific to *this* Project.

That the Project may have air quality and GHG emissions impacts is also evidenced by the recent BAAQMD thresholds, according to which “[i]f the project includes any of the operational screening criteria above [including industrial sources or activities], then the lead agency would need to perform a detailed assessment of the project’s criteria air pollutant and precursor emissions.”<sup>7</sup> Yet, the IS/MND concludes that the Project will have *neither* GHG emissions nor air quality impacts.

The Project may further have severe GHG emissions and air quality impacts in light of its traffic mitigation measure which assumes that the employees will choose to bike or walk to the Project Site and thereby be exposed to the high level of diesel emissions of heavy trucks both at the Project Site and the nearby industrial sites. Such increased GHG emissions and air quality impacts may also occur in light of the fact that the Project proposes traffic-calming alterations to nearby roads, which reasonably foreseeably—along with the trucks and bikes riding on the same roads—will create congestion on the roads and idling of the heavy-duty trucks, as well as other vehicles.

## 2. Hazards Impacts

### Comment D.25

The Project may also have hazards impacts, in light of potential soil contamination due to prior agricultural work and use of pesticides. The Project’s Phase I ESA, for this purpose, discloses such potential. Phase I ESA, p. 10. And yet, the Phase I ESA does not adequately study that potential as, *inter alia*, it concludes, without supporting evidence, that “the potential for residual pesticides, if any, at these locations to significantly impact the planned commercial use of the Site appears low.” *Id.* It reaches this conclusion despite admitting that “residual pesticide concentrations could remain in on-Site soil.” *Id.* The Phase I ESA also recommends that soil sampling be conducted in order to determine if naturally occurring asbestos (“**NOA**”) is present at the Site and whether an asbestos dust mitigation plan (“**ADMP**”) and associated air

---

<sup>7</sup> BAAQMD, Chapter 4, p. 4-3; see available at: [Bay Area Air Quality Management District California Environmental Quality Act Air Quality Guidelines \(baaqmd.gov\)](https://www.baaqmd.gov/California-Environmental-Quality-Act-Air-Quality-Guidelines).

monitoring is required. Phase I ESA, p. 11. Fatally, the timing of such study and determination of the need for mitigation should have been conducted prior to and in preparation of the IS/MND, not at some future date considering that the Site is located within an area of mapped ultramafic rock outcrops in which asbestos occurs naturally. Phase I ESA, p. 10. Further, Phase I ESA prepared in 2021 uses the *older* ASTM standard. *Id.* (“Cornerstone performed this Phase I ESA in general accordance with ASTM E1527-13”).

This omission is particularly critical and constitutes the Phase I ESA as tellingly inaccurate given that as of 2021—post-dating the October 17, 2021, ESA Phase I Environmental Site Assessment—ASTM has revised its standards, and as of 2022, EPA<sup>8</sup> has adopted ASTM’s new and more expansive definition of REC. Thus:

“Under **ASTM E1527-13**, a REC is defined as the **presence** or **likely presence** of **any hazardous substances** or petroleum products in, on, or at a property: (1) due to **release** to the environment; (2) under **conditions indicative** of a release to the environment; or (3) under conditions that **pose a material threat** of a future release to the environment.

Under **ASTM E1527-21**, a REC means (1) the **presence** of hazardous substances or petroleum due to a release to the environment; (2) the **likely presence** of hazardous substances or petroleum products due to a **likely release** to the environment; or (3) the presence of hazardous substances or petroleum products under conditions that pose a material threat of a future release to the environment. Further, the new standard provides clarifying discussion notes and examples to assist the environmental professional in applying the definition. Together, the new definition and interpretations direct a consultant to rely on the environmental professional’s experience regarding the **likelihood** of certain conditions resulting in releases, such as the long term operation of a dry cleaner, instead of discounting that professional experience based on the lack of current “indications of a release.”<sup>9</sup> (ital. original, bold emphasis added.)

---

<sup>8</sup> <https://www.govinfo.gov/content/pkg/FR-2022-03-14/pdf/2022-05259.pdf>.

<sup>9</sup> <https://www.quarles.com/publications/epa-approves-astm-e1527-21-phase-i-esa-standard-for-all-appropriate-inquiry/>.

**Comment D.26**

Lastly, the Phase I ESA is silent on vapor intrusion REC, which study is specifically mandated by ASTM and the Environmental Protection Agency (“**EPA**”) since 2013 under the EPA Final Rule.<sup>10</sup> Thus, in its Final Rule in 2013, the EPA states:

EPA believes that ASTM E1527–13 improves upon the previous standard and reflects the evolving best practices and level of rigor that will afford prospective property owners necessary and essential information when making property transaction decisions and meeting continuing obligations under the CERCLA liability protections.

In particular, the new ASTM E1527–13 standard enhances the previous standard with regard to the delineation of historical releases or recognized environmental conditions at a property and makes important revisions to the standard practice to clarify that all appropriate inquires and **phase I environmental site assessments must include**, within the scope of the investigation, an **assessment of the real or potential occurrence of vapor migration and vapor releases on, at, in or to** the subject property.

Federal Register, Vol. 78, No. 250, December 30, 2013, p. 3 (emph. added).

**Comment D.27**

As such, the Phase I ESA’s reliance on a soil sample to be collected at some future date with the expectation that it may produce asbestos results given the Site’s location within an area of mapped, asbestos-containing ultramafic rock outcrops, and failure to consider a more comprehensive ASTM E1527-21 suggests that the Project Site may have hazards impacts that have not been studied and accounted for. Needless to say that, per the Phase I ESA, the Project had to be a *commercial* one—rather than industrial. All of these factors suggest the Project may have hazards impacts, which may also translate into adverse impacts to human beings, including employees of the Project Site as well as other human beings and sensitive receptors, including during the Project’s construction, grading, and dirt-hauling phase.

**Comment D.28**

Lastly, the IS/MND acknowledges the potential for significant hazards impacts including on human health, yet concludes, without evidentiary support, that “[c]ompliance with the broad array of existing regulations from state and local governments noted above in Section 4.9.1.1 Regulatory Framework would ensure the

---

<sup>10</sup> <https://www.epa.gov/ust/petroleum-vapor-intrusion>;  
<https://www.govinfo.gov/content/pkg/FR-2013-12-30/pdf/2013-31112.pdf>.

project would result in less than significant impacts related to the potential routine transport, use, or disposal of hazardous materials.” IS/MND, p. 109. Again, the Project’s mere implementation of hazards reduction strategies, compliance with city initiatives, and reliance on regulations is insufficient to conclude that the Project will have less than significant hazards impacts, as these measures are not specific to *this* Project.

### 3. *Water Quality Impacts*

#### Comment D.29

As for water impacts, the IS/MND acknowledges that the Project site soils may be contaminated, including with NOA and due to the presence of agricultural chemicals. IS/MND, p. 109. As such, to the extent the Project’s grading affects the underground waters, there is a reasonable foreseeability that the Project may have water impacts. Moreover, based on the IS/MND, the Project will require disturbance of soil on 10.1 acres of land, permanent conversion of 0.4 acres of mixed oak woodland to suburban land uses, permanent impacts on one acre of serpentine bunchgrass grassland and approximately 6.6-acres of California annual grassland (IS/MND, p. 59), removal of at least 11 trees including approximately nine mature native oak trees (IS/MND, pp. 50, 58), and removal of Santa Clara Valley dudleya (a federally endangered species and a Habitat Plan covered species) (IS/MND, p. 49). As such, the Project may affect the natural drainage patterns and thus have water/hydrology impacts.

### 4. *Wildlife and Biological Impacts*

#### Comment D.30

Lastly, as for wildlife and biological impacts, the IS/MND discloses that the Project site may have various protected species but proposed inadequate mitigation measures, suffering from the same flaws as the traffic mitigation measures above. To name a few problems, the IS/MND acknowledges that the Project site may accommodate the western bumble bee, California tiger salamander, California red-legged frog, foothill yellow-legged frog, Swainson’s hawk, bald eagle, least Bell’s vireo, San Joaquin kit fox, burrowing owl, loggerhead shrike, San Francisco dusky-footed woodrats, and Townsend’s big-eared bat, yet concludes that all are absent from the Site due to a lack of observance during the May 2022 field survey. IS/MND, p. 50. The IS/MND is silent on whether these species were observed at any point after May 2022. Additional site surveys must be completed prior to the Project’s building phase to adequately determine whether and to what extent protected species may be present on the Site.

#### Comment D.31

Further, the IS/MND acknowledges that:

The only special-status wildlife species that can potentially breed or occur on or immediately adjacent to the project site are the Bay checkerspot butterfly, Crotch's bumble bee, yellow warbler, and white-tailed kite. Of these species, only the Bay checkerspot butterfly is covered under the Habitat Plan. During a survey conducted in April 2023, no Bay checkerspot butterfly adults or Crotch's bumble bees were observed. While the Bay checkerspot butterfly and Crotch's bumble bee are unlikely to be present, it is possible that individuals may occasionally forage or breed on the site and, therefore, the species cannot be deemed absent.

*Id.*

That the federally threatened Bay checkerspot butterfly and Crotch's bumble bee were not observed during a single survey conducted in April 2023 says little about whether the Site hosts or is suitable to host the Bay checkerspot butterfly, which live an average of just 10 days as adults, and emerge during a six-week period from late February to early May. The IS/MND acknowledges that "[w]hile the Bay checkerspot butterfly and Crotch's bumble bee are unlikely to be present, it is possible that individuals may occasionally forage or breed on the site and, therefore, the species cannot be deemed absent." *Id.*

The IS/MND provides that the "preparation of a Habitat Plan application for the project and payment of Habitat Plan impact fees (including the serpentine specialty fee) pursuant to the City's standard permit condition would reduce impacts to the Bay checkerspot butterfly." IS/MND, p. 59. The IS/MND is silent on the mechanism by which such measure will reduce impacts to the Bay checkerspot butterfly. Further, this measure defers mitigation in violation of CEQA [Comment D.32] The MND's mitigation measures for nesting raptors, other migratory birds, or Western burrowing owls are similarly inadequate, unenforceable, and illusory. MND, pp. 60-63. ]

**Comment D.33**

In sum, the MND's findings of no impacts, including but not limited to impacts in air quality and GHG emissions, are clearly erroneous, and an EIR is required to not only disclose the Project's respective impacts, but also relate those to the adverse health impacts and impacts to the human beings that the Project may have. *Sierra Club v. County of Fresno* (2018) 6 Cal.5th 502.

Further, the above-noted impacts to human beings, as well as the fact that the Project may have cumulative impacts with related projects, these impacts by themselves

require mandatory findings of significance and the preparation of an EIR under CEQA Guidelines section 15065. The City's summary denial of such mandatory significance impacts is conclusory and unsupported, in light of the above-mentioned evidence.

**Comment D.34** <sup>5.</sup> *Noise Impacts*

The Project proposes to construct a one-story 121,850-square-foot industrial/manufacturing warehouse. IS/MND, p. 1. Yet, while the IS/MND ultimately concludes that the Project will have a less than significant impact on noise and therefore no mitigation is required (IS/MND, p. 10), the IS/MND fails to actually conduct any analysis of the Project's potential noise impacts which would show that such impacts may occur. In fact, the Noise Assessment in Appendix G ("**Noise Assessment**") of the IS/MND explicitly concludes that no mitigation is required with regards to each impact discussed.

Furthermore, where the Noise Assessment does find that there will be a significant noise impact, it relies on the Project's "implementation of GP Policy EC-1.7, Municipal Code requirements, and the City's Standard Permit Conditions" to conclude that the Project's "temporary construction noise impacts would be reduced to a less-than-significant level." However, it is improper for the IS/MND to merely rely on Applicant's compliance with regulatory measures to conclude that the Project will have less than significant impacts for a number of reasons. For example, noise regulations do not capture all the noise impacts of the Project, including construction and operation. Moreover, the regulatory measures are not Project-specific and are focused on the Project itself—as such, they fail to consider issues specific to the Project, such as location, size, proposed mitigation measures, as well as the Project's *cumulative* impacts along with other related projects. Further, the IS/MND's traffic impacts are understated, and therefore traffic noise is understated and left unaccounted for. Thus, an EIR is required to study the Project's noise impacts and to determine whether those will be significant.

As stated in CEQA, Guidelines section 15126.4(a)(1)(B), "[c]ompliance with a regulatory permit or other similar process may be identified as mitigation if compliance would result in implementation of measures that would be reasonably expected, based on substantial evidence in the record, to reduce the significant impact to the specified performance standards." See also *Californians for Alternatives to Toxics v. Department of Food & Agric.* (2005) 136 Cal.App.4th 1 (the court set aside an EIR for a statewide crop

disease control plan because it did not include an evaluation of the risks to the environment and human health from the proposed program but simply presumed that no adverse impacts would occur from use of pesticides in accordance with the registration and labeling program of the California Department of Pesticide Regulation); *Ebbetts Pass Forest Watch v Department of Forestry & Fire Protection* (2008) 43 Cal. App. 4th 936, 956 (fact that Department of Pesticide Regulation had assessed environmental effects of certain herbicides in general did not excuse failure to assess effects of their use for specific timber harvesting project).

In addition, the Project's reliance on regulatory compliance with the referenced regulations is misplaced because there is no evidence that such ordinances were to control noise outside of the building's envelope, such as, for example, traffic noise or increase in ambient noises due to the Project's construction and operation. *California Clean Energy Committee v. City of Woodland* (2014) 225 Cal.App.4th 173, 210 (the building codes do not address the question of whether the Project is even *safe* to build, "whether a building should be constructed at all, how large it should be, where it should be located, whether it should incorporate certain resources, or anything else external to the building's envelope.")

Accordingly, there is a fair argument that the Project may have a significant noise impact and as such, the Project's potential noise impacts should be thoroughly analyzed and evaluated in an Environmental Impact Report pursuant to CEQA.

### **III. THE CITY MUST, AT THE VERY LEAST, REVISE AND RECIRCULATE THE IS/MND.**

#### **Comment D.35**

Section 15073.5 of the CEQA Guidelines provides that a negative declaration must be recirculated whenever the document must be substantially revised. A substantial revision includes the identification of new, avoidable significant effects requiring mitigation measures or project revisions to be added to reduce the effect to less than significant levels or upon the agency determining that a proposed mitigation measure or project change would not reduce a potential impact to insignificance.

Additionally, when new information is brought to light showing that an impact previously discussed in an IS/MND and found to be insignificant with or without mitigation in the IS/MND's analysis has the potential for a significant environmental impact supported by substantial evidence, the IS/MND must consider and resolve the conflict in the evidence. See *Visalia Retail, L.P. v. City of Visalia* (2018) 20 Cal. App.

5th 1, 13, 17; see also *Protect the Historic Amador Waterways v. Amador Water Agency* (2004) 116 Cal. App. 4th 1099, 1109.

Here, in light of the IS/MND's failure to substantiate all of its findings, provide adequate mitigation measures, and fully assess all relevant factors, the Project requires significant revisions and resolution of conflicts in evidence. Therefore, at a minimum, the City must revise and recirculate the IS/MND if it does not prepare an EIR.

A. The IS/MND's Project Description Is Insufficient.

**Comment D.36**

"[A]n accurate, stable and finite project description is the sine qua non of an informative and legally sufficient" environmental document. *County of Inyo v. City of Los Angeles* (1977) 71 Cal.App.3d 185, 200. "A curtailed or distorted project description may stultify the objectives of the reporting process" as an accurate, stable, and finite project description is necessary to allow "affected outsiders and public decision-makers balance the proposal's benefit against its environmental cost, consider mitigation measures, assess the advantage of terminating the proposal. *Id.* at 192-93.

Here, as a preliminary matter, the IS/MND is insufficient and requires revision given that it fails to specify the Project's objective and intended usage. Rather, the MND provides that "the exact usage of the proposed building is yet to be determined, but would likely be utilized for industrial distribution, manufacturing, and/or research & development activities." IS/MND at 1. Such lack of specification does not provide the public or City with a meaningful understanding of the intent of the Project and why it is warranted. The IS/MND must be revised to conclusively establish why the Project is needed and what exactly it intends to achieve before the City blanketly signs off on an unspecified industrial development.

B. The IS/MND Fails to Mitigate the Project's Significant Impacts.

**Comment D.37**

If a project has a significant effect on the environment, an agency may approve the project only upon finding that it has "eliminated or substantially lessened all significant effects on the environment where feasible" and that any unavoidable significant effects on the environment are "acceptable due to overriding concerns." CEQA Guidelines, § 15092, subds. (b)(2)(A)-(B).

CEQA mitigation measures proposed and adopted are required to describe what actions will be taken to reduce or avoid an environmental impact. CEQA Guidelines, § 15126.4, subd. (a)(1)(B) (providing "[f]ormulation of mitigation measures should not be deferred until some future time"). While the same Guidelines section

15126.5(a)(1)(B) acknowledges an exception to the rule against deferrals, such exception is narrowly proscribed to situations where it is impractical or infeasible to include those details during the project's environmental review. Moreover, CEQA allows deferral of details of mitigation measures only "when it is impractical or infeasible to include those details during the project's environmental review." *Id.* CEQA further requires "that the agency (1) commits itself to the mitigation, (2) adopts specific performance standards the mitigation will achieve, and (3) identifies the type(s) of potential action(s) that can feasibly achieve that performance standard[.]" CEQA Guidelines, § 15126.4, subd. (a)(1)(B).

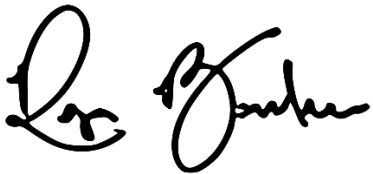

As discussed above, the Project fails to mitigate its significant impacts. Therefore, at minimum, the IS/MND must be revised or otherwise an EIR prepared.

#### IV. CONCLUSION

**Comment D.38**

Based on the foregoing, the City should prepare an EIR for the Project given that there is a fair argument that the Project will result in significant environmental impacts. However, at the very least, the City must revise the IS/MND to address the aforementioned concerns. Should the City have any questions, it should feel free to contact this office.

Sincerely,

**Subject: Local Hire Requirements and Considerations for Greenhouse Gas Modeling**

---

Dear Mr. Tsai,

Soil Water Air Protection Enterprise (“SWAPE”) is pleased to provide the following draft technical report explaining the significance of worker trips required for construction of land use development projects with respect to the estimation of greenhouse gas (“GHG”) emissions. The report will also discuss the potential for local hire requirements to reduce the length of worker trips, and consequently, reduced or mitigate the potential GHG impacts.

### Worker Trips and Greenhouse Gas Calculations

The California Emissions Estimator Model (“CalEEMod”) is a “statewide land use emissions computer model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify potential criteria pollutant and greenhouse gas (GHG) emissions associated with both construction and operations from a variety of land use projects.”<sup>1</sup> CalEEMod quantifies construction-related emissions associated with land use projects resulting from off-road construction equipment; on-road mobile equipment associated with workers, vendors, and hauling; fugitive dust associated with grading, demolition, truck loading, and on-road vehicles traveling along paved and unpaved roads; and architectural coating activities; and paving.<sup>2</sup>

The number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.<sup>3</sup>

---

<sup>1</sup> “California Emissions Estimator Model.” CAPCOA, 2017, available at: <http://www.aqmd.gov/caleemod/home>.

<sup>2</sup> “California Emissions Estimator Model.” CAPCOA, 2017, available at: <http://www.aqmd.gov/caleemod/home>.

<sup>3</sup> “CalEEMod User’s Guide.” CAPCOA, November 2017, available at: [http://www.aqmd.gov/docs/default-source/caleemod/01\\_user-39-s-guide2016-3-2\\_15november2017.pdf?sfvrsn=4](http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4), p. 34.

Specifically, the number and length of vehicle trips is utilized to estimate the vehicle miles travelled (“VMT”) associated with construction. Then, utilizing vehicle-class specific EMFAC 2014 emission factors, CalEEMod calculates the vehicle exhaust, evaporative, and dust emissions resulting from construction-related VMT, including personal vehicles for worker commuting.<sup>4</sup>

Specifically, in order to calculate VMT, CalEEMod multiplies the average daily trip rate by the average overall trip length (see excerpt below):

$$\text{“VMT}_d = \Sigma(\text{Average Daily Trip Rate}_i * \text{Average Overall Trip Length}_i)_n$$

Where:

$n$  = Number of land uses being modeled.”<sup>5</sup>

Furthermore, to calculate the on-road emissions associated with worker trips, CalEEMod utilizes the following equation (see excerpt below):

$$\text{“Emissions}_{\text{pollutant}} = \text{VMT} * \text{EF}_{\text{running,pollutant}}$$

Where:

$\text{Emissions}_{\text{pollutant}}$  = emissions from vehicle running for each pollutant

VMT = vehicle miles traveled

$\text{EF}_{\text{running,pollutant}}$  = emission factor for running emissions.”<sup>6</sup>

Thus, there is a direct relationship between trip length and VMT, as well as a direct relationship between VMT and vehicle running emissions. In other words, when the trip length is increased, the VMT and vehicle running emissions increase as a result. Thus, vehicle running emissions can be reduced by decreasing the average overall trip length, by way of a local hire requirement or otherwise.

## Default Worker Trip Parameters and Potential Local Hire Requirements

As previously discussed, the number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.<sup>7</sup> In order to understand how local hire requirements and associated worker trip length reductions impact GHG emissions calculations, it is important to consider the CalEEMod default worker trip parameters. CalEEMod provides recommended default values based on site-specific information, such as land use type, meteorological data, total lot acreage, project type and typical equipment associated with project type. If more specific project information is known, the user can change the default values and input project-specific values, but the California Environmental Quality Act (“CEQA”) requires that such changes be justified by substantial evidence.<sup>8</sup> The default number of construction-related worker trips is calculated by multiplying the

<sup>8</sup> CalEEMod User Guide, available at: <http://www.caleemod.com/>, p. 1, 9.

number of pieces of equipment for all phases by 1.25, with the exception of worker trips required for the building construction and architectural coating phases.<sup>9</sup> Furthermore, the worker trip vehicle class is a 50/25/25 percent mix of light duty autos, light duty truck class 1 and light duty truck class 2, respectively.”<sup>10</sup> Finally, the default worker trip length is consistent with the length of the operational home-to-work vehicle trips.<sup>11</sup> The operational home-to-work vehicle trip lengths are:

“[B]ased on the *location* and *urbanization* selected on the project characteristic screen. These values were *supplied by the air districts or use a default average for the state*. Each district (or county) also assigns trip lengths for urban and rural settings” (emphasis added).<sup>12</sup>

Thus, the default worker trip length is based on the location and urbanization level selected by the User when modeling emissions. The below table shows the CalEEMod default rural and urban worker trip lengths by air basin (see excerpt below and Attachment A).<sup>13</sup>

Worker Trip Length by Air Basin		
Air Basin	Rural (miles)	Urban (miles)
Great Basin Valleys	16.8	10.8

<sup>13</sup> “Appendix D Default Data Tables.” CAPCOA, October 2017, available at: [http://www.aqmd.gov/docs/default-source/caleemod/05\\_appendix-d2016-3-2.pdf?sfvrsn=4](http://www.aqmd.gov/docs/default-source/caleemod/05_appendix-d2016-3-2.pdf?sfvrsn=4), p. D-84 – D-86.

As demonstrated above, default rural worker trip lengths for air basins in California vary from 10.8- to 19.8- miles, with an average of 16.47 miles. Furthermore, default urban worker trip lengths vary from 10.8- to 14.7- miles, with an average of 11.17 miles. Thus, while default worker trip lengths vary by location, default urban worker trip lengths tend to be shorter in length. Based on these trends evident in the CalEEMod default worker trip lengths, we can reasonably assume that the efficacy of a local hire requirement is especially dependent upon the urbanization of the project site, as well as the project location.

**Practical Application of a Local Hire Requirement and Associated Impact**

To provide an example of the potential impact of a local hire provision on construction-related GHG emissions, we estimated the significance of a local hire provision for the Village South Specific Plan (“Project”) located in the City of Claremont (“City”). The Project proposed to construct 1,000 residential units, 100,000-SF of retail space, 45,000-SF of office space, as well as a 50-room hotel, on the 24-acre site. The Project location is classified as Urban and lies within the Los Angeles-South Coast County. As a result, the Project has a default worker trip length of 14.7 miles.<sup>14</sup> In an effort to evaluate the potential for a local hire provision to reduce the Project’s construction-related GHG emissions, we prepared an updated model, reducing all worker trip lengths to 10 miles (see Attachment B). Our analysis estimates that if a local hire provision with a 10-mile radius were to be implemented, the GHG emissions associated with Project construction would decrease by approximately 17% (see table below and Attachment C).

<b>Local Hire Provision Net Change</b>	
<b>Without Local Hire Provision</b>	
Total Construction GHG Emissions (MT CO <sub>2</sub> e)	3,623
Amortized Construction GHG Emissions (MT CO <sub>2</sub> e/year)	120.77
<b>With Local Hire Provision</b>	
Total Construction GHG Emissions (MT CO <sub>2</sub> e)	3,024
Amortized Construction GHG Emissions (MT CO <sub>2</sub> e/year)	100.80
<b>% Decrease in Construction-related GHG Emissions</b>	<b>17%</b>

As demonstrated above, by implementing a local hire provision requiring 10 mile worker trip lengths, the Project could reduce potential GHG emissions associated with construction worker trips. More broadly, any local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

This serves as an example of the potential impacts of local hire requirements on estimated project-level GHG emissions, though it does not indicate that local hire requirements would result in reduced construction-related GHG emission for all projects. As previously described, the significance of a local hire requirement depends on the worker trip length enforced and the default worker trip length for the project’s urbanization level and location.

<sup>14</sup> “Appendix D Default Data Tables.” CAPCOA, October 2017, available at: [http://www.aqmd.gov/docs/default-source/caleemod/05\\_appendix-d2016-3-2.pdf?sfvrsn=4](http://www.aqmd.gov/docs/default-source/caleemod/05_appendix-d2016-3-2.pdf?sfvrsn=4), p. D-85.

## Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

### 3.0 Construction Detail

#### Construction Phase

Phase Number	Phase Name	Phase Type	Start Date	End Date	Num Days Week	Num Days	Phase Description
1	Demolition	Demolition	9/1/2021	10/12/2021	5	30	
2	Site Preparation	Site Preparation	10/13/2021	11/9/2021	5	20	
3	Grading	Grading	11/10/2021	1/11/2022	5	45	
4	Building Construction	Building Construction	1/12/2022	12/12/2023	5	500	
5	Paving	Paving	12/13/2023	1/30/2024	5	35	
6	Architectural Coating	Architectural Coating	1/31/2024	3/19/2024	5	35	

Acres of Grading (Site Preparation Phase): 0

Acres of Grading (Grading Phase): 112.5

Acres of Paving: 0

Residential Indoor: 2,025,000; Residential Outdoor: 675,000; Non-Residential Indoor: 326,400; Non-Residential Outdoor: 108,800; Striped Parking Area: 0 (Architectural Coating – sqft)

#### OffRoad Equipment

## Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Phase Name	Offroad Equipment Type	Amount	Usage Hours	Horse Power	Load Factor
Demolition	Concrete/Industrial Saws	1	8.00	81	0.73
Demolition	Excavators	3	8.00	158	0.38
Demolition	Rubber Tired Dozers	2	8.00	247	0.40
Site Preparation	Rubber Tired Dozers	3	8.00	247	0.40
Site Preparation	Tractors/Loaders/Backhoes	4	8.00	97	0.37
Grading	Excavators	2	8.00	158	0.38
Grading	Graders	1	8.00	187	0.41
Grading	Rubber Tired Dozers	1	8.00	247	0.40
Grading	Scrapers	2	8.00	367	0.48
Grading	Tractors/Loaders/Backhoes	2	8.00	97	0.37
Building Construction	Cranes	1	7.00	231	0.29
Building Construction	Forklifts	3	8.00	89	0.20
Building Construction	Generator Sets	1	8.00	84	0.74
Building Construction	Tractors/Loaders/Backhoes	3	7.00	97	0.37
Building Construction	Welders	1	8.00	46	0.45
Paving	Pavers	2	8.00	130	0.42
Paving	Paving Equipment	2	8.00	132	0.36
Paving	Rollers	2	8.00	80	0.38
Architectural Coating	Air Compressors	1	6.00	78	0.48

Trips and VMT

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

## Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

### 3.0 Construction Detail

#### Construction Phase

Phase Number	Phase Name	Phase Type	Start Date	End Date	Num Days Week	Num Days	Phase Description
1	Demolition	Demolition	9/1/2021	10/12/2021	5	30	
2	Site Preparation	Site Preparation	10/13/2021	11/9/2021	5	20	
3	Grading	Grading	11/10/2021	1/11/2022	5	45	
4	Building Construction	Building Construction	1/12/2022	12/12/2023	5	500	
5	Paving	Paving	12/13/2023	1/30/2024	5	35	
6	Architectural Coating	Architectural Coating	1/31/2024	3/19/2024	5	35	

Acres of Grading (Site Preparation Phase): 0

Acres of Grading (Grading Phase): 112.5

Acres of Paving: 0

Residential Indoor: 2,025,000; Residential Outdoor: 675,000; Non-Residential Indoor: 326,400; Non-Residential Outdoor: 108,800; Striped Parking Area: 0 (Architectural Coating – sqft)

#### OffRoad Equipment

## Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

Phase Name	Offroad Equipment Type	Amount	Usage Hours	Horse Power	Load Factor
Demolition	Concrete/Industrial Saws	1	8.00	81	0.73
Demolition	Excavators	3	8.00	158	0.38
Demolition	Rubber Tired Dozers	2	8.00	247	0.40
Site Preparation	Rubber Tired Dozers	3	8.00	247	0.40
Site Preparation	Tractors/Loaders/Backhoes	4	8.00	97	0.37
Grading	Excavators	2	8.00	158	0.38
Grading	Graders	1	8.00	187	0.41
Grading	Rubber Tired Dozers	1	8.00	247	0.40
Grading	Scrapers	2	8.00	367	0.48
Grading	Tractors/Loaders/Backhoes	2	8.00	97	0.37
Building Construction	Cranes	1	7.00	231	0.29
Building Construction	Forklifts	3	8.00	89	0.20
Building Construction	Generator Sets	1	8.00	84	0.74
Building Construction	Tractors/Loaders/Backhoes	3	7.00	97	0.37
Building Construction	Welders	1	8.00	46	0.45
Paving	Pavers	2	8.00	130	0.42
Paving	Paving Equipment	2	8.00	132	0.36
Paving	Rollers	2	8.00	80	0.38
Architectural Coating	Air Compressors	1	6.00	78	0.48

Trips and VMT

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

## Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Annual

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

## Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

### 3.0 Construction Detail

#### Construction Phase

Phase Number	Phase Name	Phase Type	Start Date	End Date	Num Days Week	Num Days	Phase Description
1	Demolition	Demolition	9/1/2021	10/12/2021	5	30	
2	Site Preparation	Site Preparation	10/13/2021	11/9/2021	5	20	
3	Grading	Grading	11/10/2021	1/11/2022	5	45	
4	Building Construction	Building Construction	1/12/2022	12/12/2023	5	500	
5	Paving	Paving	12/13/2023	1/30/2024	5	35	
6	Architectural Coating	Architectural Coating	1/31/2024	3/19/2024	5	35	

Acres of Grading (Site Preparation Phase): 0

Acres of Grading (Grading Phase): 112.5

Acres of Paving: 0

Residential Indoor: 2,025,000; Residential Outdoor: 675,000; Non-Residential Indoor: 326,400; Non-Residential Outdoor: 108,800; Striped Parking Area: 0 (Architectural Coating – sqft)

#### OffRoad Equipment

## Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Phase Name	Offroad Equipment Type	Amount	Usage Hours	Horse Power	Load Factor
Demolition	Concrete/Industrial Saws	1	8.00	81	0.73
Demolition	Excavators	3	8.00	158	0.38
Demolition	Rubber Tired Dozers	2	8.00	247	0.40
Site Preparation	Rubber Tired Dozers	3	8.00	247	0.40
Site Preparation	Tractors/Loaders/Backhoes	4	8.00	97	0.37
Grading	Excavators	2	8.00	158	0.38
Grading	Graders	1	8.00	187	0.41
Grading	Rubber Tired Dozers	1	8.00	247	0.40
Grading	Scrapers	2	8.00	367	0.48
Grading	Tractors/Loaders/Backhoes	2	8.00	97	0.37
Building Construction	Cranes	1	7.00	231	0.29
Building Construction	Forklifts	3	8.00	89	0.20
Building Construction	Generator Sets	1	8.00	84	0.74
Building Construction	Tractors/Loaders/Backhoes	3	7.00	97	0.37
Building Construction	Welders	1	8.00	46	0.45
Paving	Pavers	2	8.00	130	0.42
Paving	Paving Equipment	2	8.00	132	0.36
Paving	Rollers	2	8.00	80	0.38
Architectural Coating	Air Compressors	1	6.00	78	0.48

Trips and VMT

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

## Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

2	Site Preparation	Site Preparation	10/13/2021	11/9/2021	5	20	
3	Grading	Grading	11/10/2021	1/11/2022	5	45	
4	Building Construction	Building Construction	1/12/2022	12/12/2023	5	500	
5	Paving	Paving	12/13/2023	1/30/2024	5	35	
6	Architectural Coating	Architectural Coating	1/31/2024	3/19/2024	5	35	

Acres of Grading (Site Preparation Phase): 0

Acres of Grading (Grading Phase): 112.5

Acres of Paving: 0

Residential Indoor: 2,025,000; Residential Outdoor: 675,000; Non-Residential Indoor: 326,400; Non-Residential Outdoor: 108,800; Striped Parking Area: 0 (Architectural Coating – sqft)

#### OffRoad Equipment

## Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

Phase Name	Offroad Equipment Type	Amount	Usage Hours	Horse Power	Load Factor
Demolition	Concrete/Industrial Saws	1	8.00	81	0.73
Demolition	Excavators	3	8.00	158	0.38
Demolition	Rubber Tired Dozers	2	8.00	247	0.40
Site Preparation	Rubber Tired Dozers	3	8.00	247	0.40
Site Preparation	Tractors/Loaders/Backhoes	4	8.00	97	0.37
Grading	Excavators	2	8.00	158	0.38
Grading	Graders	1	8.00	187	0.41
Grading	Rubber Tired Dozers	1	8.00	247	0.40
Grading	Scrapers	2	8.00	367	0.48
Grading	Tractors/Loaders/Backhoes	2	8.00	97	0.37
Building Construction	Cranes	1	7.00	231	0.29
Building Construction	Forklifts	3	8.00	89	0.20
Building Construction	Generator Sets	1	8.00	84	0.74
Building Construction	Tractors/Loaders/Backhoes	3	7.00	97	0.37
Building Construction	Welders	1	8.00	46	0.45
Paving	Pavers	2	8.00	130	0.42
Paving	Paving Equipment	2	8.00	132	0.36
Paving	Rollers	2	8.00	80	0.38
Architectural Coating	Air Compressors	1	6.00	78	0.48

**Trips and VMT**

**EXHIBIT B**

## ***Paul Rosenfeld, Ph.D.***

*Principal Environmental Chemist*

**Chemical Fate and Transport & Air Dispersion Modeling**

**Risk Assessment & Remediation Specialist**

### **Education**

Ph.D. Soil Chemistry, University of Washington, 1999. Dissertation on volatile organic compound filtration.

M.S. Environmental Science, U.C. Berkeley, 1995. Thesis on organic waste economics.

B.A. Environmental Studies, U.C. Santa Barbara, 1991. Thesis on wastewater treatment.

### **Professional Experience**

Dr. Rosenfeld has over 25 years' experience conducting environmental investigations and risk assessments for evaluating impacts to human health, property, and ecological receptors. His expertise focuses on the fate and transport of environmental contaminants, human health risk, exposure assessment, and ecological restoration. Dr. Rosenfeld has evaluated and modeled emissions from unconventional oil drilling operations, oil spills, landfills, boilers and incinerators, process stacks, storage tanks, confined animal feeding operations, and many other industrial and agricultural sources. His project experience ranges from monitoring and modeling of pollution sources to evaluating impacts of pollution on workers at industrial facilities and residents in surrounding communities.

Dr. Rosenfeld has investigated and designed remediation programs and risk assessments for contaminated sites containing lead, heavy metals, mold, bacteria, particulate matter, petroleum hydrocarbons, chlorinated solvents, pesticides, radioactive waste, dioxins and furans, semi- and volatile organic compounds, PCBs, PAHs, perchlorate, asbestos, per- and poly-fluoroalkyl substances (PFOA/PFOS), unusual polymers, fuel oxygenates (MTBE), among other pollutants. Dr. Rosenfeld also has experience evaluating greenhouse gas emissions from various projects and is an expert on the assessment of odors from industrial and agricultural sites, as well as the evaluation of odor nuisance impacts and technologies for abatement of odorous emissions. As a principal scientist at SWAPE, Dr. Rosenfeld directs air dispersion modeling and exposure assessments. He has served as an expert witness and testified about pollution sources causing nuisance and/or personal injury at dozens of sites and has testified as an expert witness on more than ten cases involving exposure to air contaminants from industrial sources.

## **Professional History:**

Soil Water Air Protection Enterprise (SWAPE); 2003 to present; Principal and Founding Partner  
UCLA School of Public Health; 2007 to 2011; Lecturer (Assistant Researcher)  
UCLA School of Public Health; 2003 to 2006; Adjunct Professor  
UCLA Environmental Science and Engineering Program; 2002-2004; Doctoral Intern Coordinator  
UCLA Institute of the Environment, 2001-2002; Research Associate  
Komex H<sub>2</sub>O Science, 2001 to 2003; Senior Remediation Scientist  
National Groundwater Association, 2002-2004; Lecturer  
San Diego State University, 1999-2001; Adjunct Professor  
Anteon Corp., San Diego, 2000-2001; Remediation Project Manager  
Ogden (now Amec), San Diego, 2000-2000; Remediation Project Manager  
Bechtel, San Diego, California, 1999 – 2000; Risk Assessor  
King County, Seattle, 1996 – 1999; Scientist  
James River Corp., Washington, 1995-96; Scientist  
Big Creek Lumber, Davenport, California, 1995; Scientist  
Plumas Corp., California and USFS, Tahoe 1993-1995; Scientist  
Peace Corps and World Wildlife Fund, St. Kitts, West Indies, 1991-1993; Scientist

**Rosenfeld, P.E.,** C.L. Henry, R. B. Harrison, and R. Dills. (1997). Comparison of Odor Emissions From Three Different Biosolids Applied to Forest Soil. *Soil Science Society of America*. Lecture conducted from Anaheim California.

## **Teaching Experience:**

UCLA Department of Environmental Health (Summer 2003 through 2010) Taught Environmental Health Science 100 to students, including undergrad, medical doctors, public health professionals and nurses. Course focused on the health effects of environmental contaminants.

National Ground Water Association, Successful Remediation Technologies. Custom Course in Sante Fe, New Mexico. May 21, 2002. Focused on fate and transport of fuel contaminants associated with underground storage tanks.

National Ground Water Association; Successful Remediation Technologies Course in Chicago Illinois. April 1, 2002. Focused on fate and transport of contaminants associated with Superfund and RCRA sites.

California Integrated Waste Management Board, April and May, 2001. Alternative Landfill Caps Seminar in San Diego, Ventura, and San Francisco. Focused on both prescriptive and innovative landfill cover design.

UCLA Department of Environmental Engineering, February 5, 2002. Seminar on Successful Remediation Technologies focusing on Groundwater Remediation.

University Of Washington, Soil Science Program, Teaching Assistant for several courses including: Soil Chemistry, Organic Soil Amendments, and Soil Stability.

U.C. Berkeley, Environmental Science Program Teaching Assistant for Environmental Science 10.

## **Academic Grants Awarded:**

California Integrated Waste Management Board. \$41,000 grant awarded to UCLA Institute of the Environment. Goal: To investigate effect of high carbon wood ash on volatile organic emissions from compost. 2001.

Synagro Technologies, Corona California: \$10,000 grant awarded to San Diego State University. Goal: investigate effect of biosolids for restoration and remediation of degraded coastal sage soils. 2000.

King County, Department of Research and Technology, Washington State. \$100,000 grant awarded to University of Washington: Goal: To investigate odor emissions from biosolids application and the effect of polymers and ash on VOC emissions. 1998.

Northwest Biosolids Management Association, Washington State. \$20,000 grant awarded to investigate effect of polymers and ash on VOC emissions from biosolids. 1997.

James River Corporation, Oregon: \$10,000 grant was awarded to investigate the success of genetically engineered Poplar trees with resistance to round-up. 1996.

United State Forest Service, Tahoe National Forest: \$15,000 grant was awarded to investigating fire ecology of the Tahoe National Forest. 1995.

Kellogg Foundation, Washington D.C. \$500 grant was awarded to construct a large anaerobic digester on St. Kitts in West Indies. 1993

## **Deposition and/or Trial Testimony:**

- In the United States District Court For The District of New Jersey  
Duarte et al, *Plaintiffs*, vs. United States Metals Refining Company et. al. *Defendant*.  
Case No.: 2:17-cv-01624-ES-SCM  
Rosenfeld Deposition. 6-7-2019
- In the United States District Court of Southern District of Texas Galveston Division  
M/T Carla Maersk, *Plaintiffs*, vs. Conti 168., Schiffahrts-GMBH & Co. Bulker KG MS “Conti Perdido”  
*Defendant*.  
Case No.: 3:15-CV-00106 consolidated with 3:15-CV-00237  
Rosenfeld Deposition. 5-9-2019
- In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica  
Carole-Taddeo-Bates et al., vs. Ifran Khan et al., Defendants  
Case No.: No. BC615636  
Rosenfeld Deposition, 1-26-2019
- In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica  
The San Gabriel Valley Council of Governments et al. vs El Adobe Apts. Inc. et al., Defendants  
Case No.: No. BC646857  
Rosenfeld Deposition, 10-6-2018; Trial 3-7-19
- In United States District Court For The District of Colorado  
Bells et al. Plaintiff vs. The 3M Company et al., Defendants  
Case: No 1:16-cv-02531-RBJ  
Rosenfeld Deposition, 3-15-2018 and 4-3-2018
- In The District Court Of Regan County, Texas, 112<sup>th</sup> Judicial District  
Phillip Bales et al., Plaintiff vs. Dow Agrosiences, LLC, et al., Defendants  
Cause No 1923  
Rosenfeld Deposition, 11-17-2017
- In The Superior Court of the State of California In And For The County Of Contra Costa  
Simons et al., Plaintiffs vs. Chevron Corporation, et al., Defendants  
Cause No C12-01481  
Rosenfeld Deposition, 11-20-2017
- In The Circuit Court Of The Twentieth Judicial Circuit, St Clair County, Illinois  
Martha Custer et al., Plaintiff vs. Cerro Flow Products, Inc., Defendants  
Case No.: No. 0i9-L-2295  
Rosenfeld Deposition, 8-23-2017
- In The Superior Court of the State of California, For The County of Los Angeles  
Warrn Gilbert and Penny Gilber, Plaintiff vs. BMW of North America LLC  
Case No.: LC102019 (c/w BC582154)  
Rosenfeld Deposition, 8-16-2017, Trail 8-28-2018
- In the Northern District Court of Mississippi, Greenville Division  
Brenda J. Cooper, et al., *Plaintiffs*, vs. Meritor Inc., et al., *Defendants*  
Case Number: 4:16-cv-52-DMB-JVM  
Rosenfeld Deposition: July 2017

In The Superior Court of the State of Washington, County of Snohomish  
Michael Davis and Julie Davis et al., Plaintiff vs. Cedar Grove Composting Inc., Defendants  
Case No.: No. 13-2-03987-5  
Rosenfeld Deposition, February 2017  
Trial, March 2017

In The Superior Court of the State of California, County of Alameda  
Charles Spain., Plaintiff vs. Thermo Fisher Scientific, et al., Defendants  
Case No.: RG14711115  
Rosenfeld Deposition, September 2015

In The Iowa District Court In And For Poweshiek County  
Russell D. Winburn, et al., Plaintiffs vs. Doug Hoksbergen, et al., Defendants  
Case No.: LALA002187  
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County  
Jerry Dovico, et al., Plaintiffs vs. Valley View Sine LLC, et al., Defendants  
Law No.: LALA105144 - Division A  
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County  
Doug Pauls, et al., et al., Plaintiffs vs. Richard Warren, et al., Defendants  
Law No.: LALA105144 - Division A  
Rosenfeld Deposition, August 2015

In The Circuit Court of Ohio County, West Virginia  
Robert Andrews, et al. v. Antero, et al.  
Civil Action NO. 14-C-30000  
Rosenfeld Deposition, June 2015

In The Third Judicial District County of Dona Ana, New Mexico  
Betty Gonzalez, et al. Plaintiffs vs. Del Oro Dairy, Del Oro Real Estate LLC, Jerry Settles and Deward  
DeRuyter, Defendants  
Rosenfeld Deposition: July 2015

In The Iowa District Court For Muscatine County  
Laurie Freeman et. al. Plaintiffs vs. Grain Processing Corporation, Defendant  
Case No 4980  
Rosenfeld Deposition: May 2015

In the Circuit Court of the 17<sup>th</sup> Judicial Circuit, in and For Broward County, Florida  
Walter Hinton, et. al. Plaintiff, vs. City of Fort Lauderdale, Florida, a Municipality, Defendant.  
Case Number CACE07030358 (26)  
Rosenfeld Deposition: December 2014

In the United States District Court Western District of Oklahoma  
Tommy McCarty, et al., Plaintiffs, v. Oklahoma City Landfill, LLC d/b/a Southeast Oklahoma City  
Landfill, et al. Defendants.  
Case No. 5:12-cv-01152-C  
Rosenfeld Deposition: July 2014

In the County Court of Dallas County Texas  
Lisa Parr et al, *Plaintiff*, vs. Aruba et al, *Defendant*.  
Case Number cc-11-01650-E  
Rosenfeld Deposition: March and September 2013  
Rosenfeld Trial: April 2014

In the Court of Common Pleas of Tuscarawas County Ohio  
John Michael Abicht, et al., *Plaintiffs*, vs. Republic Services, Inc., et al., *Defendants*  
Case Number: 2008 CT 10 0741 (Cons. w/ 2009 CV 10 0987)  
Rosenfeld Deposition: October 2012

In the United States District Court of Southern District of Texas Galveston Division  
Kyle Cannon, Eugene Donovan, Genaro Ramirez, Carol Sassler, and Harvey Walton, each Individually and on behalf of those similarly situated, *Plaintiffs*, vs. BP Products North America, Inc., *Defendant*.  
Case 3:10-cv-00622  
Rosenfeld Deposition: February 2012  
Rosenfeld Trial: April 2013

In the Circuit Court of Baltimore County Maryland  
Philip E. Cvach, II et al., *Plaintiffs* vs. Two Farms, Inc. d/b/a Royal Farms, Defendants  
Case Number: 03-C-12-012487 OT  
Rosenfeld Deposition: September 2013

**Matthew F. Hagemann, P.G., C.Hg., QSD, QSP**

**Geologic and Hydrogeologic Characterization  
Industrial Stormwater Compliance  
Investigation and Remediation Strategies  
Litigation Support and Testifying Expert  
CEQA Review**

**Education:**

M.S. Degree, Geology, California State University Los Angeles, Los Angeles, CA, 1984.

B.A. Degree, Geology, Humboldt State University, Arcata, CA, 1982.

**Professional Certifications:**

California Professional Geologist

California Certified Hydrogeologist

Qualified SWPPP Developer and Practitioner

**Professional Experience:**

Matt has 25 years of experience in environmental policy, assessment and remediation. He spent nine years with the U.S. EPA in the RCRA and Superfund programs and served as EPA's Senior Science Policy Advisor in the Western Regional Office where he identified emerging threats to groundwater from perchlorate and MTBE. While with EPA, Matt also served as a Senior Hydrogeologist in the oversight of the assessment of seven major military facilities undergoing base closure. He led numerous enforcement actions under provisions of the Resource Conservation and Recovery Act (RCRA) while also working with permit holders to improve hydrogeologic characterization and water quality monitoring.

Matt has worked closely with U.S. EPA legal counsel and the technical staff of several states in the application and enforcement of RCRA, Safe Drinking Water Act and Clean Water Act regulations. Matt has trained the technical staff in the States of California, Hawaii, Nevada, Arizona and the Territory of Guam in the conduct of investigations, groundwater fundamentals, and sampling techniques.

Positions Matt has held include:

- Founding Partner, Soil/Water/Air Protection Enterprise (SWAPE) (2003 – present);
- Geology Instructor, Golden West College, 2010 – 2014;
- Senior Environmental Analyst, Komex H2O Science, Inc. (2000 -- 2003);

- Executive Director, Orange Coast Watch (2001 – 2004);
- Senior Science Policy Advisor and Hydrogeologist, U.S. Environmental Protection Agency (1989–1998);
- Hydrogeologist, National Park Service, Water Resources Division (1998 – 2000);
- Adjunct Faculty Member, San Francisco State University, Department of Geosciences (1993 – 1998);
- Instructor, College of Marin, Department of Science (1990 – 1995);
- Geologist, U.S. Forest Service (1986 – 1998); and
- Geologist, Dames & Moore (1984 – 1986).

**Senior Regulatory and Litigation Support Analyst:**

With SWAPE, Matt’s responsibilities have included:

- Lead analyst and testifying expert in the review of over 100 environmental impact reports since 2003 under CEQA that identify significant issues with regard to hazardous waste, water resources, water quality, air quality, Valley Fever, greenhouse gas emissions, and geologic hazards. Make recommendations for additional mitigation measures to lead agencies at the local and county level to include additional characterization of health risks and implementation of protective measures to reduce worker exposure to hazards from toxins and Valley Fever.
- Stormwater analysis, sampling and best management practice evaluation at industrial facilities.
- Manager of a project to provide technical assistance to a community adjacent to a former Naval shipyard under a grant from the U.S. EPA.
- Technical assistance and litigation support for vapor intrusion concerns.
- Lead analyst and testifying expert in the review of environmental issues in license applications for large solar power plants before the California Energy Commission.
- Manager of a project to evaluate numerous formerly used military sites in the western U.S.
- Manager of a comprehensive evaluation of potential sources of perchlorate contamination in Southern California drinking water wells.
- Manager and designated expert for litigation support under provisions of Proposition 65 in the review of releases of gasoline to sources drinking water at major refineries and hundreds of gas stations throughout California.
- Expert witness on two cases involving MTBE litigation.
- Expert witness and litigation support on the impact of air toxins and hazards at a school.
- Expert witness in litigation at a former plywood plant.

With Komex H2O Science Inc., Matt’s duties included the following:

- Senior author of a report on the extent of perchlorate contamination that was used in testimony by the former U.S. EPA Administrator and General Counsel.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of MTBE use, research, and regulation.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of perchlorate use, research, and regulation.
- Senior researcher in a study that estimates nationwide costs for MTBE remediation and drinking water treatment, results of which were published in newspapers nationwide and in testimony against provisions of an energy bill that would limit liability for oil companies.
- Research to support litigation to restore drinking water supplies that have been contaminated by MTBE in California and New York.

- Expert witness testimony in a case of oil production-related contamination in Mississippi.
- Lead author for a multi-volume remedial investigation report for an operating school in Los Angeles that met strict regulatory requirements and rigorous deadlines.

- Development of strategic approaches for cleanup of contaminated sites in consultation with clients and regulators.

### **Executive Director:**

As Executive Director with Orange Coast Watch, Matt led efforts to restore water quality at Orange County beaches from multiple sources of contamination including urban runoff and the discharge of wastewater. In reporting to a Board of Directors that included representatives from leading Orange County universities and businesses, Matt prepared issue papers in the areas of treatment and disinfection of wastewater and control of the discharge of grease to sewer systems. Matt actively participated in the development of countywide water quality permits for the control of urban runoff and permits for the discharge of wastewater. Matt worked with other nonprofits to protect and restore water quality, including Surfrider, Natural Resources Defense Council and Orange County CoastKeeper as well as with business institutions including the Orange County Business Council.

### **Hydrogeology:**

As a Senior Hydrogeologist with the U.S. Environmental Protection Agency, Matt led investigations to characterize and cleanup closing military bases, including Mare Island Naval Shipyard, Hunters Point Naval Shipyard, Treasure Island Naval Station, Alameda Naval Station, Moffett Field, Mather Army Airfield, and Sacramento Army Depot. Specific activities were as follows:

- Led efforts to model groundwater flow and contaminant transport, ensured adequacy of monitoring networks, and assessed cleanup alternatives for contaminated sediment, soil, and groundwater.
- Initiated a regional program for evaluation of groundwater sampling practices and laboratory analysis at military bases.
- Identified emerging issues, wrote technical guidance, and assisted in policy and regulation development through work on four national U.S. EPA workgroups, including the Superfund Groundwater Technical Forum and the Federal Facilities Forum.

At the request of the State of Hawaii, Matt developed a methodology to determine the vulnerability of groundwater to contamination on the islands of Maui and Oahu. He used analytical models and a GIS to show zones of vulnerability, and the results were adopted and published by the State of Hawaii and County of Maui.

As a hydrogeologist with the EPA Groundwater Protection Section, Matt worked with provisions of the Safe Drinking Water Act and NEPA to prevent drinking water contamination. Specific activities included the following:

- Received an EPA Bronze Medal for his contribution to the development of national guidance for the protection of drinking water.
- Managed the Sole Source Aquifer Program and protected the drinking water of two communities through designation under the Safe Drinking Water Act. He prepared geologic reports, conducted public hearings, and responded to public comments from residents who were very concerned about the impact of designation.

- Reviewed a number of Environmental Impact Statements for planned major developments, including large hazardous and solid waste disposal facilities, mine reclamation, and water transfer.

Matt served as a hydrogeologist with the RCRA Hazardous Waste program. Duties were as follows:

- Supervised the hydrogeologic investigation of hazardous waste sites to determine compliance with Subtitle C requirements.
- Reviewed and wrote "part B" permits for the disposal of hazardous waste.
- Conducted RCRA Corrective Action investigations of waste sites and led inspections that formed the basis for significant enforcement actions that were developed in close coordination with U.S. EPA legal counsel.
- Wrote contract specifications and supervised contractor's investigations of waste sites.

With the National Park Service, Matt directed service-wide investigations of contaminant sources to prevent degradation of water quality, including the following tasks:

- Applied pertinent laws and regulations including CERCLA, RCRA, NEPA, NRDA, and the Clean Water Act to control military, mining, and landfill contaminants.
- Conducted watershed-scale investigations of contaminants at parks, including Yellowstone and Olympic National Park.
- Identified high-levels of perchlorate in soil adjacent to a national park in New Mexico and advised park superintendent on appropriate response actions under CERCLA.
- Served as a Park Service representative on the Interagency Perchlorate Steering Committee, a national workgroup.
- Developed a program to conduct environmental compliance audits of all National Parks while serving on a national workgroup.
- Co-authored two papers on the potential for water contamination from the operation of personal watercraft and snowmobiles, these papers serving as the basis for the development of nation-wide policy on the use of these vehicles in National Parks.
- Contributed to the Federal Multi-Agency Source Water Agreement under the Clean Water Action Plan.

**Policy:**

Served senior management as the Senior Science Policy Advisor with the U.S. Environmental Protection Agency, Region 9. Activities included the following:

- Advised the Regional Administrator and senior management on emerging issues such as the potential for the gasoline additive MTBE and ammonium perchlorate to contaminate drinking water supplies.
- Shaped EPA's national response to these threats by serving on workgroups and by contributing to guidance, including the Office of Research and Development publication, *Oxygenates in Water: Critical Information and Research Needs*.
- Improved the technical training of EPA's scientific and engineering staff.
- Earned an EPA Bronze Medal for representing the region's 300 scientists and engineers in negotiations with the Administrator and senior management to better integrate scientific principles into the policy-making process.
- Established national protocol for the peer review of scientific documents.

### Geology:

With the U.S. Forest Service, Matt led investigations to determine hillslope stability of areas proposed for timber harvest in the central Oregon Coast Range. Specific activities were as follows:

- Mapped geology in the field, and used aerial photographic interpretation and mathematical models to determine slope stability.
- Coordinated his research with community members who were concerned with natural resource protection.
- Characterized the geology of an aquifer that serves as the sole source of drinking water for the city of Medford, Oregon.

As a consultant with Dames and Moore, Matt led geologic investigations of two contaminated sites (later listed on the Superfund NPL) in the Portland, Oregon, area and a large hazardous waste site in eastern Oregon. Duties included the following:

- Supervised year-long effort for soil and groundwater sampling.
- Conducted aquifer tests.
- Investigated active faults beneath sites proposed for hazardous waste disposal.

### Teaching:

From 1990 to 1998, Matt taught at least one course per semester at the community college and university levels:

- At San Francisco State University, held an adjunct faculty position and taught courses in environmental geology, oceanography (lab and lecture), hydrogeology, and groundwater contamination.
- Served as a committee member for graduate and undergraduate students.
- Taught courses in environmental geology and oceanography at the College of Marin.

Matt taught physical geology (lecture and lab and introductory geology at Golden West College in Huntington Beach, California from 2010 to 2014.

### Invited Testimony, Reports, Papers and Presentations:

**Hagemann, M.F.**, 2008. Disclosure of Hazardous Waste Issues under CEQA. Presentation to the Public Environmental Law Conference, Eugene, Oregon.

**Hagemann, M.F.**, 2008. Disclosure of Hazardous Waste Issues under CEQA. Invited presentation to U.S. EPA Region 9, San Francisco, California.

**Hagemann, M.F.**, 2005. Use of Electronic Databases in Environmental Regulation, Policy Making and Public Participation. Brownfields 2005, Denver, Colorado.

**Hagemann, M.F.**, 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Nevada and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Las Vegas, NV (served on conference organizing committee).

**Hagemann, M.F.**, 2004. Invited testimony to a California Senate committee hearing on air toxins at schools in Southern California, Los Angeles.

Brown, A., Farrow, J., Gray, A. and **Hagemann, M.**, 2004. An Estimate of Costs to Address MTBE Releases from Underground Storage Tanks and the Resulting Impact to Drinking Water Wells. Presentation to the Ground Water and Environmental Law Conference, National Groundwater Association.

**Hagemann, M.F.**, 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Arizona and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Phoenix, AZ (served on conference organizing committee).

**Hagemann, M.F.**, 2003. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in the Southwestern U.S. Invited presentation to a special committee meeting of the National Academy of Sciences, Irvine, CA.

**Hagemann, M.F.**, 2003. Perchlorate Contamination of the Colorado River. Invited presentation to a tribal EPA meeting, Pechanga, CA.

**Hagemann, M.F.**, 2003. Perchlorate Contamination of the Colorado River. Invited presentation to a meeting of tribal representatives, Parker, AZ.

**Hagemann, M.F.**, 2003. Impact of Perchlorate on the Colorado River and Associated Drinking Water Supplies. Invited presentation to the Inter-Tribal Meeting, Torres Martinez Tribe.

**Hagemann, M.F.**, 2003. The Emergence of Perchlorate as a Widespread Drinking Water Contaminant. Invited presentation to the U.S. EPA Region 9.

**Hagemann, M.F.**, 2003. A Deductive Approach to the Assessment of Perchlorate Contamination. Invited presentation to the California Assembly Natural Resources Committee.

**Hagemann, M.F.**, 2003. Perchlorate: A Cold War Legacy in Drinking Water. Presentation to a meeting of the National Groundwater Association.

**Hagemann, M.F.**, 2002. From Tank to Tap: A Chronology of MTBE in Groundwater. Presentation to a meeting of the National Groundwater Association.

**Hagemann, M.F.**, 2002. A Chronology of MTBE in Groundwater and an Estimate of Costs to Address Impacts to Groundwater. Presentation to the annual meeting of the Society of Environmental Journalists.

**Hagemann, M.F.**, 2002. An Estimate of the Cost to Address MTBE Contamination in Groundwater (and Who Will Pay). Presentation to a meeting of the National Groundwater Association.

**Hagemann, M.F.**, 2002. An Estimate of Costs to Address MTBE Releases from Underground Storage Tanks and the Resulting Impact to Drinking Water Wells. Presentation to a meeting of the U.S. EPA and State Underground Storage Tank Program managers.

**Hagemann, M.F.**, 2001. From Tank to Tap: A Chronology of MTBE in Groundwater. Unpublished report.

**Hagemann, M.F.**, 2001. Estimated Cleanup Cost for MTBE in Groundwater Used as Drinking Water. Unpublished report.

# 1. Introduction

---

Transportation Demand Management (TDM) is a combination of services, incentives, facilities, and actions that reduce single-occupant vehicle (SOV) trips and resulting vehicle miles traveled (VMT) to help relieve traffic congestion and air pollution problems. The purpose of TDM is to (1) reduce the amount of trips and resulting VMT generated by new development; (2) promote more efficient utilization of existing transportation facilities and ensure that new developments are designed to maximize the potential for sustainable transportation usage; and (3) establish an ongoing monitoring and enforcement program to guarantee the desired trip reductions are achieved.

This TDM plan has been prepared for the proposed development at on the north side of Embedded Way between Coyote Creek and Hellyer Avenue. The Transportation Analysis dated April 3, 2023 completed for the proposed project indicates that the project would result in an impact on the transportation system based on the City's VMT impact criteria. Per the completed Transportation Analysis, the project will be required to implement the following multi-modal facility improvements to reduce the identified significant VMT impact:

- Provide Pedestrian Network Improvements for Active Transportation (Tier 2 – Pedestrian Access Improvements): Implement pedestrian improvements both on-site and in the surrounding area. Improving pedestrian connections encourages people to walk instead of driving and reduces VMT. The project will be required to remove the pork-chop islands on the southwest and northwest corners at the Embedded Way and Hellyer Avenue intersection to improve pedestrian safety and access. This improvement will require a signal modification at this intersection that will include the relocation of signal poles, heads, and crosswalks. **and**
- Provide Traffic Calming Measures (Tier 2 – Traffic Calming Measures): Implement pedestrian/bicycle safety and traffic calming measures both on-site and in the surrounding neighborhood. Providing traffic calming measures promotes walking and biking as an alternative to driving. The project will be required to install raised median islands along Embedded Way consisting of a 120-foot segment at its western terminus and a 190-foot segment near the Embedded Way and Hellyer Avenue intersection.

In addition, the project must implement Travel Demand Management (TDM) measures that may include the following:

- Commuter Trip Reduction Marketing/Education: Implement marketing/educational campaigns that promote the use of transit, shared rides, and travel through active modes for 25% of the project

employees. Strategies may include the incorporation of alternative commute options into new employee orientations, event promotions, and publications.

- Subsidize Vanpool: Provide subsidies for individuals forming new vanpools for their commute. This encourages the use of vanpools, reducing drive-alone trips, and thereby reducing VMT. The project would be required to subsidize 100% of the cost of the vanpool cost with at least 25% employee participation.

This TDM plan must be submitted to the City for approval. The applicant will need to work with the City to ensure the TDM measures are implemented by the building tenants or identify other TDM measures deemed appropriate for the building uses. Therefore, the ultimate TDM measures may differ from those identified above so long as the measures meet the required VMT reduction and are approved by City staff.

## Project Description

The proposed project consists of a 121,850-square-foot (s.f.) industrial building on an approximately ten-acre vacant site. Since a tenant and use of the proposed building have yet to be identified, the applicant for the Transportation Analysis was completed for two tenant use alternatives to allow for the flexibility to utilize the building with either warehouse, industrial, or research & development (R&D) uses. The TA study included the evaluation of the proposed 121,850 s.f. of building space as both R&D and industrial space.

Direct access to the project site would be provided via an existing full-access driveway located at the western terminus of Embedded Way. However, the project's surface lots, and drive aisles, would connect to the adjoining property along its eastern frontage (5325 Hellyer Avenue). Therefore, there would also be additional access points at existing driveways along Hellyer Avenue (right-in/right-out only) and Embedded Way (full-access). A total of 299 vehicular parking spaces are proposed on-site. The on-site parking will consist of 179 new parking spaces as well as 120 existing spaces that will be dedicated for project use per a development agreement with adjacent properties (*Declaration of Covenants, Conditions, Restrictions and Easements for Edenvale Technology Park, Article 2 Project Easements, July 2018*).

The project site location and the surrounding study area are shown in Figure 1. The project site plan is shown in Figure 2.

## Report Organization

The remainder of this report is divided into two chapters. Chapter 2 describes the existing transportation facilities and services in the vicinity of the project site. Chapter 3 describes the TDM measures that would be implemented for the proposed project, including the program for implementing and monitoring the TDM plan.

## 2. Existing Transportation Facilities and Services

---

Transportation facilities and services that support sustainable modes of transportation include commuter rail, buses and shuttle buses, bicycle facilities, and pedestrian facilities. This chapter describes the existing and future transit services, as well as bicycle and pedestrian facilities, in the vicinity of the project site.

### Existing Bicycle and Pedestrian Facilities

All new development projects in San Jose should encourage multi-modal travel, consistent with the goals of the City's General Plan. It is the goal of the General Plan that all development projects accommodate and encourage the use of non-automobile transportation modes to achieve San Jose's mobility goals and reduce vehicle trip generation and vehicle miles traveled. In addition, the adopted City Bike Master Plan establishes goals, policies, and actions to make bicycling a daily part of life in San Jose. The Master Plan includes designated bike lanes along many City streets, including designated bike corridors. In order to further the goals of the City, pedestrian and bicycle facilities should be encouraged with new development projects.

Note that the City's General Plan identifies both walk and bicycle commute mode split targets as 15 percent or more for the year 2040. This level of pedestrian and bicycle mode share is a reasonable goal for the project, particularly if LRT and bus services are utilized in combination with bicycle commuting. The existing bicycle, pedestrian, and transit facilities in the study area are described below.

### Existing Pedestrian Facilities

Pedestrian facilities consist of sidewalks and crosswalks in the project vicinity, as well as the Coyote Creek Trail. Crosswalks with pedestrian signal heads and push buttons are located at all the signalized intersections in the study area. In the project vicinity, there are sidewalks along both sides of Hellyer Avenue, Embedded Way, and Fontanoso Way. There are existing crosswalks and accessible ramps at the signalized intersections of Hellyer Avenue/Embedded Way and Hellyer Avenue/Fontanoso Way.

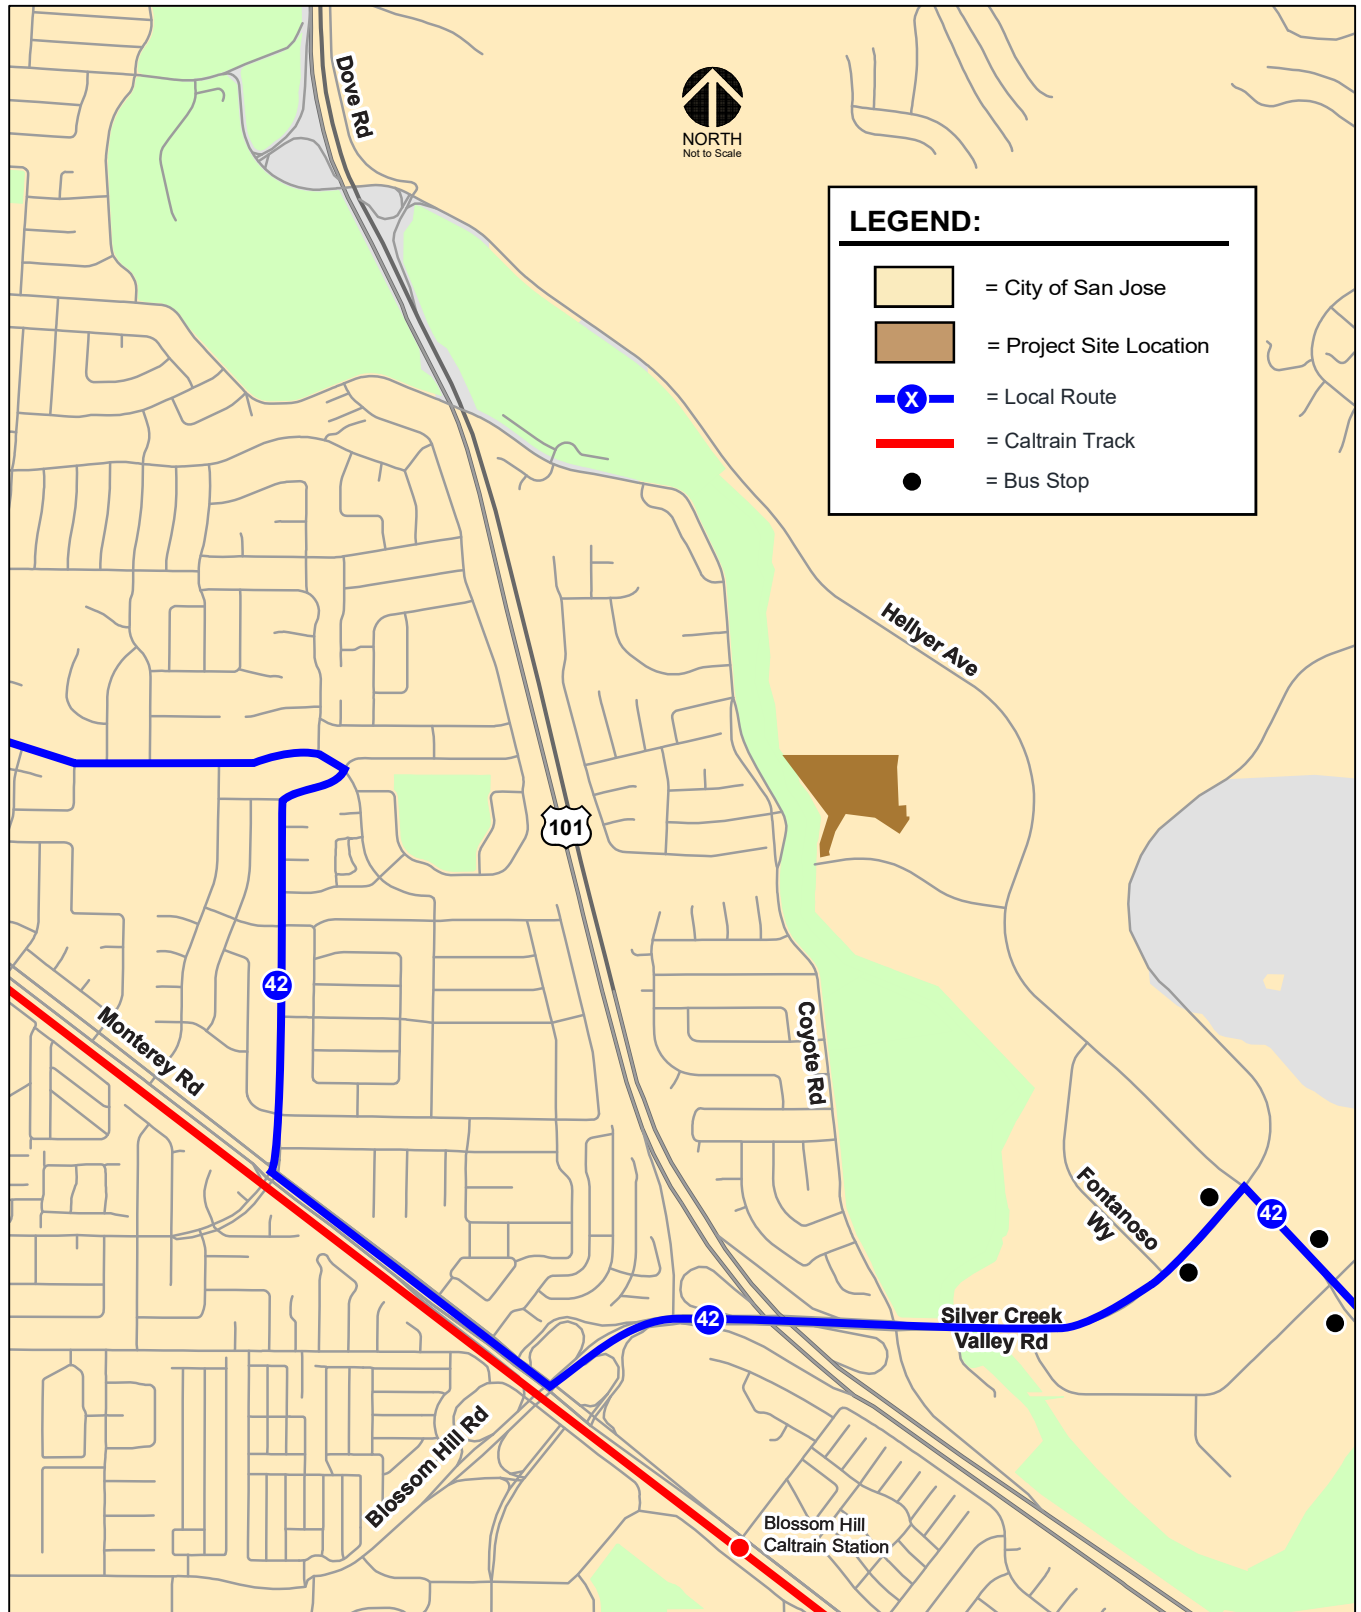

### Existing Bicycle Facilities

The existing bicycle facilities in the project vicinity include Class II bike lanes and Class III bike routes (see Figure 3).

**Figure 3**  
**Existing Bicycle Facilities**

**Figure 4**  
**Existing Transit Facilities**

**Class I Bikeway (Trail or Path).** Class I bikeways are off-street trails or paths with exclusive right-of-way for nonmotorized transportation used for commuting as well as recreation. The Coyote Creek Trail is one of the longest trail systems extending from the Bay to the City's southern boundary. The northern portion of the trail system runs from SR 237 to Montague Expressway. A short downtown portion travels through Selma Olinder Park. The southern portion begins at Tully Road and extends southward through county jurisdiction and reaches Morgan Hill. The closest trail access is provided at the west end of Embedded Way, approximately 900 feet from the project site. The trail actually borders the site on the west side, but there's a steep slope between the site and the trail that presently prevents direct access along that border.

**Class II Bikeway (Bike Lane).** Class II bikeways are striped bike lanes on roadways that are marked by signage and pavement markings. Within the vicinity of the project site, striped bike lanes are present on the following roadway segments:

- Hellyer Avenue, between the US 101 northbound ramps and Silicon Valley Road
- Silver Creek Valley Road, between the US 101 northbound ramps and Yerba Buena Road
- Embedded Way, along its entire length

## Existing Transit Service

Existing transit services to the study area are provided by the Santa Clara Valley Transportation Authority (VTA) and Caltrain. The transit stations and VTA bus routes within walking distance of the project site are shown in Figure 4.

### VTA Bus Services

The project site is served by VTA Local Bus Route 42. Route 42 travels along Silver Creek Valley Road, Hellyer Avenue, and Silicon Valley Boulevard in the project vicinity and provides service between Evergreen Valley College and Kaiser San Jose. Route 42 runs on 60-minute headways between 6:00 AM and 7:00 PM and provides service to the Blossom Hill Caltrain station. Local Route 42 has stops just west of the intersection of Silver Creek Valley Road and Hellyer Avenue, about 0.9 miles from the project site.

### Caltrain Services

Commuter rail service between San Francisco and Gilroy is provided by Caltrain. The Blossom Hill Caltrain Station is located at the Monterey Road/Ford Road intersection, approximately 1.15 miles southwest of the project site. A pedestrian bridge to access the station is provided between Great Oaks Boulevard and Monterey Road. The associated Park-and-Ride lot is located on the southeast corner of the intersection of Monterey Road and Ford Road. The Blossom Hill Caltrain Station is served by two northbound trains in the morning commute period with 30-minute headway and two southbound trains in the evening commute period with 90-minute headway.

### 3.

## VMT Impacts and Mitigation Measures

---

Per the VMT analysis completed for the project, the mitigation of the project's impacts to VMT will include both physical multi-modal improvements to the transportation system and implementation of TDM measures. Therefore, the project also will be required to complete annual TDM monitoring to ensure that its peak hour trip cap as established by the City is not exceeded. The project's impacts on VMT and required mitigation are discussed below.

### Project VMT Impacts and Mitigation Measures

Per Council Policy 5-1, the effects of the proposed project on VMT were evaluated in the Transportation Analysis dated April 3, 2023 using the methodology outlined in the City's *Transportation Analysis Handbook*. The results of the VMT evaluation, using the City's VMT Evaluation Tool, indicate that the project is located within a high-VMT area for industrial employment, and it is projected to generate VMT per industrial employee which would exceed the City's established VMT impact threshold. Therefore, the project would result in an impact on the transportation system based on the City's VMT impact criteria.

**Project Impact:** The use of the proposed building for warehouse/industrial uses is projected to generate 15.12 VMT per employee, which would exceed the established impact threshold of 14.37 VMT per employee for industrial employment uses. The use of the proposed building for R&D uses is projected to generate 14.95 VMT per employee, which would exceed the established impact threshold of 12.21 VMT per employee for office employment uses. Therefore, the project would result in an impact on the transportation system based on the City's VMT impact criteria with the use of the proposed building as warehouse/industrial and R&D uses, and mitigation measures are required to reduce the VMT impact.

**Mitigation Measures:** Per the completed Transportation Analysis, the project will be required to implement the following multi-modal facility improvements to reduce the project's VMT impact to less than significant levels for the use of the proposed building as either warehouse/industrial or office uses:

- **Provide Pedestrian Network Improvements for Active Transportation (Tier 2 – Pedestrian Access Improvements):** Implement pedestrian improvements both on-site and in the surrounding area. Improving pedestrian connections encourages people to walk instead of driving and reduces VMT. The project will be required to remove the pork-chop islands on the southwest and northwest corners at the Embedded Way and Hellyer Avenue intersection to improve pedestrian

safety and access. This improvement will require a signal modification at this intersection that will include the relocation of signal poles, heads, and crosswalks. **and**

- Provide Traffic Calming Measures (Tier 2 – Traffic Calming Measures): Implement pedestrian/bicycle safety and traffic calming measures both on-site and in the surrounding neighborhood. Providing traffic calming measures promotes walking and biking as an alternative to driving. The project will be required to install raised median islands along Embedded Way consisting of a 120-foot segment at its western terminus and a 190-foot segment near the Embedded Way and Hellyer Avenue intersection.

The implementation of the Tier 2 mitigation measures described above would reduce the VMT generated by the warehouse/industrial uses to 14.52 per employee and 14.36 per office employee which would both still be greater than the established impact thresholds. The project's VMT could be reduced further with the implementation of Travel Demand Management (TDM) measures that may include the following:

- Commute Trip Reduction Marketing/Education: Implement marketing/educational campaigns that promote the use of transit, shared rides, and travel through active modes for 25% of the project employees. Strategies may include the incorporation of alternative commute options into new employee orientations, event promotions, and publications.
- Subsidize Vanpool: Provide subsidies for individuals forming new vanpools for their commute. This encourages the use of vanpools, reducing drive-alone trips, and thereby reducing VMT. The project would be required to subsidize 100% of the cost of the vanpool cost with at least 25% employee participation.

The implementation of Tier 2 mitigation measures and TDM plan would reduce the projected VMT to 12.34 VMT per employee for warehouse uses and 12.20 VMT per employee for office uses, which would reduce the project impact to less than significant for both uses of the proposed building.

The applicant will need to work with the City to ensure the TDM measures are implemented by the building tenants or identify other TDM measures deemed appropriate for the building uses. Therefore, the ultimate TDM measures may differ from those identified above so long as the measures meet the required VMT reduction of 5.4 percent for warehouse uses and 19.6 percent for R&D uses and are approved by City staff.

## 4. TDM Implementation and Monitoring

---

The primary purpose of the TDM plan is to reduce the VMT generated by the project by 5.4 percent for warehouse uses and 19.6 percent for R&D uses. Per Section 20.90.220 of the San Jose Code of Ordinances, monitoring will be necessary to ensure that the TDM measures are effective and continue to be successfully implemented.

### Implementation

The project applicant must submit this TDM Plan to the City of San Jose and will be responsible for ensuring that the TDM elements are incorporated into the project. After the development is constructed and occupied, the project applicant needs to identify a TDM coordinator. It is assumed that the property manager for the project would be responsible for implementing the ongoing TDM measures. If the TDM coordinator changes for any reason, the City and tenants should be notified of the name and contact information of the new designated TDM coordinator.

### Monitoring and Reporting

The TDM plan will need to be re-evaluated annually for the life of the project. The designated TDM coordinator will consult with City staff to ensure the monitoring and reporting meets the City's expectations. Monitoring will include the following components:

- Annual Vehicle Trip Generation Counts
- Annual Mode Share Survey
- Annual Monitoring Report

### Annual Vehicle Trip Generation Counts

Annual trip generation counts must demonstrate the vehicle trips generated by the project are within 10% of an established peak hour trip cap and must be prepared by a traffic engineer. The peak hour trip cap will be based on the project's estimated gross project trips for its potential R&D uses consisting of 118 gross AM peak-hour trips and 111 gross PM peak-hour trips or 20 gross AM peak-hour trips and 21 gross PM peak-hour trips for warehouse/industrial uses. The gross project trips are identified in the project's Transportation Analysis dated April 3, 2023. If the counts show the project trip generation is higher than expected, then the TDM Plan may need to be altered or enhanced. If the project is not in conformance with the peak hour trip cap, the project may add additional TDM measures to lower the project's trip generation and meet the trip cap.

### **Annual Mode Share Survey**

The annual survey would provide qualitative data regarding employee perceptions of the alternative transportation programs and perceptions of the obstacles to using an alternative mode of transportation. The annual survey would also provide quantitative data regarding the number of employees who utilize alternative modes of transportation (e.g., bike-to-work) to commute to work, including the frequency of use. The mode share survey results would measure the relative effectiveness of individual program components and facilitate the design of possible program enhancements.

### **Annual Monitoring Report**

The property manager should submit annual reports to the City of San Jose for three years, and then upon request of the Zoning Administrator for the life of the project with the following information:

- Findings of the trip generation counts and mode share surveys.
- Effectiveness of individual program components from the annual mode share survey.
- A description of the TDM programs and services that were offered to tenants in the preceding year, with an explanation of any changes or new programs offered or planned.
