

ProspectSV is a nonprofit cleantech innovation hub whose mission is to accelerate the adoption of clean technology in mobility, energy and the built environment.

Mobility

New ways of moving people and goods.

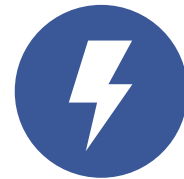

High-performance electric, connected and autonomous vehicles, intelligent traffic systems, and fresh business models will make better use of constrained infrastructure, reduce congestion and lower greenhouse gas emissions.

Buildings

More efficient commercial buildings.

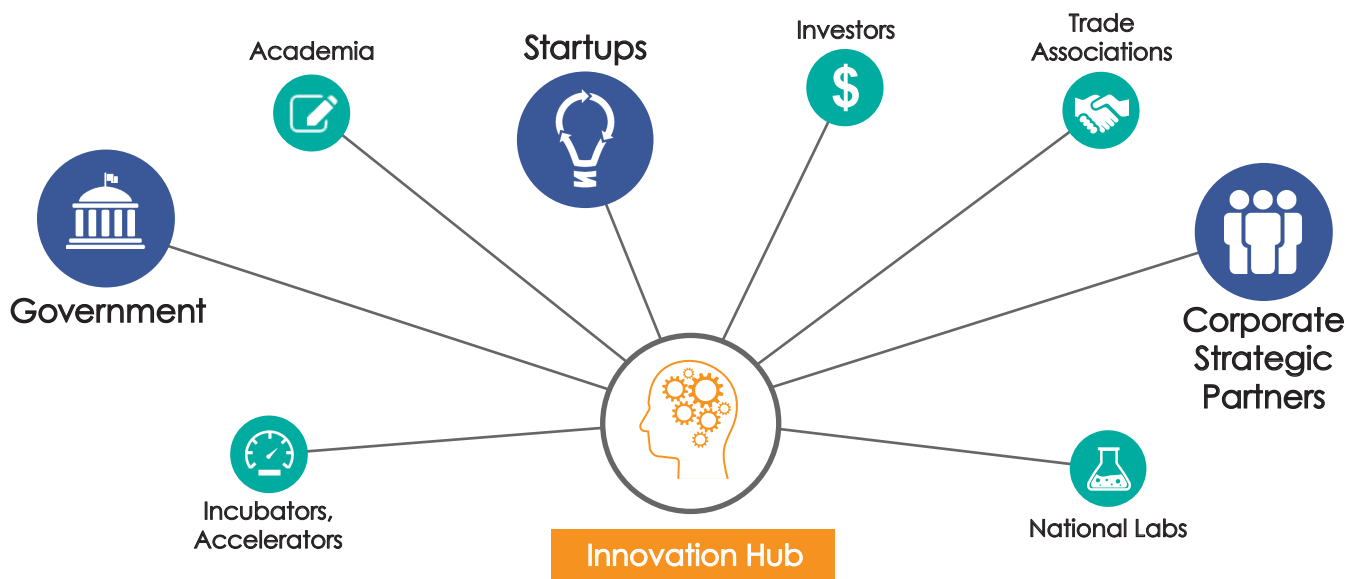

By piloting and deploying a diverse set of technologies and management platforms, we are helping commercial buildings get to Zero Net Energy, reduce water usage, and create healthier indoor environments.

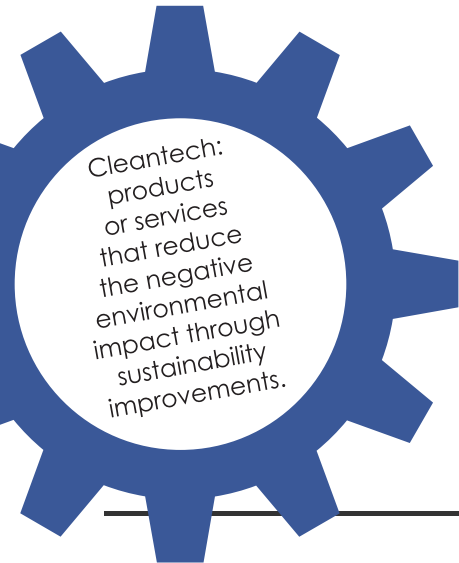

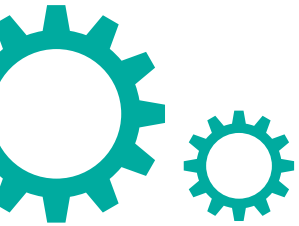

Energy

New approaches to distributed energy and grid management.

ProspectSV is working with community partners and cutting edge firms in storage and smart grid technology to demonstrate a new wave of microgrid and demand management approaches.

WE ADVANCE CLEANTECH INNOVATIONS FOR SUSTAINABLE, SMARTER COMMUNITIES

Startups

Startups look to ProspectSV for commercialization support:

- Pilots/demos, customer discovery
- Market assessment and business model development
- Connections to funding and pitch preparation
- Facilities and labs

Corporate Strategic Partners

Corporations work with ProspectSV to gain access to:

- Innovative technologies
- Market expansion and pilot opportunities
- Investment opportunities
- Public-private partnerships

Public Sector

ProspectSV assists public sector entities with:

- Project assistance
- Technology strategy
- Public-private partnerships to solve community issues
- Grant-funded project opportunities

FACILITIES

The 23,000 square-foot ProspectSV Technology Demonstration Center in San Jose, California offers excellent high-bay workshop space with a variety of tools and equipment and co-working space for startup clients and partners. Specialized facilities include the SimLab, a research-grade driving simulator operated by fkaSV, and the ITSLab (a fully functioning traffic intersection with communications equipment for testing connected vehicle applications).
