Traffic Model Assumptions

Diridon Station Area Plan Study

Land Use Data Preparation for Cube Model

P. Paul Ma and Yuanchao Huang
Department of Transportation
City of San José
December 16, 2011

This report is a revision to the original report with the same title dated June 28, 2011. The revision was necessary due to additional information regarding approved projects since completion of the original report. The additional information contemplated in this report includes Diridon Station Area Plan building blocks finalized by Field Paoli in October 2011, and developments approved independent of Downtown Strategy 2000 and Diridon Station Area Plan. These developments are described in “Land Use and Model Scenario” section of this report.

This report serves as a record of land use data preparation for transportation modeling. Considering the complexity and scope of the proposed Diridon Station Area Plan (DSAP) and the Downtown Strategy 2000 (Strategy 2000), travel demand model was chosen as the tool for trip generation and trip distribution for the DSAP traffic Levels of Service (LOS) and impact analysis. One set of land use data was prepared for each scenario modeled in City of San José’s travel demand model, or known as the CUBE model. This report provides detail description of methodology, data source, and assumption for land use preparation.

Land Use and Model Scenario

Land use data are prepared and summarized for 3 growth scenarios. Growth of each scenario was applied to Year 2008 conditions of City’s travel demand forecasting (TDF) model for projections of traffic growth which was used in traffic LOS and impact analysis.

Diridon Station Area Plan Project scenario (Project)

This scenario is a straight evaluation of development proposed in the Diridon Station Area Plan (DSAP). The scenario includes only growth amounting to the entire DSAP and nothing else. This scenario does not consider other approved developments in the surrounding areas, e.g., the Strategy 2000. This scenario, however, is required under the California Environmental Quality Act (CEQA) for adequate environmental impact analysis.

The latest DSAP building data as proposed in October, 2011, were summarized by DSAP Block in Table 1. Associated Traffic Analysis Zones, or TAZ, as defined in the CUBE model were also shown in Table #. The entire building data and their assigned blocks were attached as Appendix A. The DSAP land use plan comprises of 4,963,000 square feet (sqft) of office/R&D use, 424,100 sqft of retail use, 2,588 residential units, and 900 hotel rooms. Majority of these proposed developments occur within expanded Downtown boundary. A portion of the proposed land use, 83,800 sqft of retail and 1,398 residential, in DSAP Blocks B and C will occur west of and immediately to the Downtown Boundary.

Table 1 - Diridon Station Area Plan Land Use Breakdown

BLOCK	TAZ	Total				Inside Downtown Boundary				Outside Downtown Boundary			
		Retail q. ft.	Office/R+ D sq. ft.	Hotel rooms	Residenti al units	Retail q. ft.	Office/R+ D sq. ft.	Hotel rooms	Residenti al units	Retail q. ft.	Office/R+ D sq. ft.	Hotel rooms	Residenti al units

Downtown Strategy 2000 and Approved Projects scenario (Background)

This scenario includes development land use of the Downtown Strategy (Strategy 2000) and other approved development entitlements in and around Downtown independent of Strategy 2000. This scenario is commonly regarded as the “background” conditions that will occur regardless of the DSAP project. The Strategy 2000 land use growth was presented by the City of San Jose Redevelopment Agency in the EIR approved in 2005. The original Strategy 2000 land use was included in this scenario without adjustment related to DSAP proposal and is presented in Appendix C. Other development entitlements approved independent of Strategy 2000 were also included in this scenario to represent a possible growth conditions without the DSAP proposal. These approved developments include:

1. Adobe – San José Water Company Site (PDC02-046): Located on north side of San Fernando Street between Los Gatos Creek and Guadalupe River, this project was approved in 2004 for up to 1,025,000 square feet of commercial space consisting up to 50,000 square feet of retail space and the balance as office space on the east side of Delmas Avenue. On west side of Delmas Avenue, this project proposes up to 325 residential dwelling units and up to 15,000 of ground-floor retail space.
2. Ohlone Mixed Use Project (PDC08-061): Located at southwest corner of West San Carlos Street and Sunol Street, this project was approved in 2010 for up to 800 multi-family attached residential units and up to 30,000 square feet of commercial use.

3. Plaza at Almaden (RH00-005): Located at northwest corner of Woz Way and Almaden Boulevard, this project was approved in 2001 for an approximately 860,000 square-foot office complex and 34,500 square feet of ground floor retail space.
4. San Carlos – Meridian Mixed Use (PDC07-096): Located at southwest corner of West San Carlos Street and Meridian Avenue, this project was approved in 2008 for development entitlements of up to 218 multi-family attached units and up to 22,600 square feet of commercial space.
5. North San José Area Development Policy (GP04-04-06) Phase 1: This Area Development Policy covers 1,115.4 acres in area north of I-880 and south of SR-237 generally known as North San José approved in 2005. The Area Development Policy is a large visionary project and is consisted of 4 development phases. At present time the Phase 1 is being implemented allowing development of up to 7,000,000 square feet of industrial use and 8,000 residential dwelling units.

The approved projects are largely unconstructed or unoccupied, and are expected to contribute discernable amount of traffic to DSAP study area. These projects have combined totals of 8,560,000 sqft of office/R&D or light industrial use, 527,100 sqft of retail/commercial use, and 9,343 units of residential development spreading out over 46 TAZ's in and around the Downtown area. A majority of growth associated with approved projects not within the Downtown area, e.g., the North San José Area Development Policy and San Carlos – Meridian Mixed Use Project. They are an important part of near-term land use, thus, traffic, growth that are most reasonable to be included in the background scenario or analysis. A detailed TAZ distribution of these projects is included in Appendix B.

Diridon Station Area Plan Buildout scenario (Project + Background)

This scenario is assembled to evaluate the full traffic impacts of complete buildout of the Diridon Station Area Plan. The land use data of this scenario includes DSAP, Strategy 2000 and Approved Projects. As shown in Table 1 above, a major portion of the DSAP growth is expected to occur within expanded Downtown boundary where future development was analyzed and approved in Strategy 2000. The proposed DSAP growth represents significant change in geographic locations of future development from the Strategy 2000, although the total planned growth remains constant for Strategy 2000. Therefore, the DSAP scenario land use requires adjustment of Strategy 2000 land use. The adjustment is accomplished by reallocating Strategy 2000 land use from the traditional Downtown Core toward DSAP area. However, there are a few instances that require special treatments from the land use reallocation process.

1. “360 Residence” high rise residential tower (H05-037): This project is located at 360 S. Market Street with 203 dwelling units and 11,160 square feet of retail space. This project was approved and constructed using Strategy 2000 approved capacity. Actual usage constructed was assigned to the site and the TAZ were excluded from the reallocation process to preserve the actual use on site.

2. Adobe – San José Water Company Site (PDC02-046): Located on north side of San Fernando Street between Los Gatos Creek and Guadalupe River, this project was approved in 2004 for up to 1,025,000 square feet of commercial space consisting up to 50,000 square feet of retail space and the balance as office space on the east side of Delmas Avenue. On west side of Delmas Avenue, this project proposes up to 325 residential dwelling units and up to 15,000 of ground-floor retail space. This project was studied and approved independent of Strategy 2000. Review of project site plan concludes that the project site is unlikely to accommodate additional growth. Because this development was included as one approved project, Strategy 2000 approved land use for this site was reallocated to other areas in Downtown.
3. Plaza at Almaden (RH00-005): Located at northwest corner of Woz Way and Almaden Boulevard, this project was approved in 2001 for an approximately 860,000 square-foot office complex and 34,500 square feet of ground floor retail space. This project was studied and approved independent of Strategy 2000. Review of project site plan concludes that the project site is unlikely to accommodate additional growth. Because this development was included as one approved project, Strategy 2000 approved land use for this site was reallocated to other areas in Downtown..

The reallocated Strategy 2000 land use is referred to as Adjusted Strategy 2000. Appendix C includes a table of land use comparison of original Strategy 2000 as approved in 2006, and Adjusted Strategy 2000. The planned DSAP growth outside of Downtown was not considered in the reallocation of Strategy 2000 land use or as part of Adjusted Strategy 2000. The planned DSAP growth outside of Downtown was then added to the Adjusted Strategy 2000 land use and other approved projects to create growth conditions for DSAP project. The Adjusted Strategy 2000 land use data and the portion of DSAP outside of Downtown are depicted in the TAZ land use table in Appendix D. The land use of Approved Projects were then added to the land use of Adjusted Strategy and non-Downtown portion of DSAP to calculate total growth of Diridon Station Area Plan Buildout Scenario, or the Project plus Background Scenario. The complete land use data are presented in Appendix D. It should be noted that the DSAP Buildout Scenario is a synthesized land use scenario that Strategy 2000 provides and covers most of planned growth by DSAP, and there is no net additional growth beyond the total growth provided by Strategy 2000 within the Greater Downtown Area.

Mode Input Variable

The next step after scenario land use calculation is to convert land use data to model input format for each land use scenario before scenario model run. For CUBE model input purpose, scenario land use data (i.e., numbers of dwelling unit, hotel room, office/light industrial or retail square footage) were converted to demographic and socio-economic data(i.e., numbers of household and job). Dwelling unit to household was based on 1:1 conversion ratio. Each hotel room is converted to 550 square feet of office/light industrial space. All office/light industrial and retail space was then converted to jobs. The conversion ratios between square footage and employment were found from DSAP Preferred Plan by Field Paoli dated April, 2011. The ratios are:

- ◆ employment uses: general commercial and light industrial is 250 sq.ft./person

- ◆ employment uses: retail and restaurant is 400 sq.ft./person

Distribution of employment category was calculated using the Envision San José 2040 land use employment category distribution formulae for Downtown Core Area as below:

- ◆ 0% agriculture
- ◆ 2% manufacturing
- ◆ 1% wholesaling
- ◆ 13% retail
- ◆ 65% services
- ◆ 19% others

The resultant model input data were summarized in **Error! Reference source not found.** for the Strategy 2000 and the DSAP scenarios. The model input data represents growth capacity to be studied. For traffic analysis purpose, the existing, or base, scenario is required to project growth and traffic distribution. For the DSAP EIR traffic analysis, the validated year 2008 Base Case of Envision 2040 General Plan Update was used. There is not additional input data preparation involved the Base Case.
