Appendix B-2: Arborist Report

## TREE INVENTORY

Date: July 1, 2016 Project #4586.00, 4586.10

#### **PROJECT SITE**

Topgolf (Pin High Golf Center) 4701 N 1<sup>st</sup> Street San Jose, CA

#### **PREPARED BY**

HMH 1570 Oakland Road San Jose, CA 95131 Lisa Harris ISA Certified Arborist #WE-9977A

### TREE EVALUATION SUMMARY TABLE

Prepared By: Lisa Harris, ISA Certified Arborist #WE-9977A

DBH MEASUREMENT HEIGHT: 54"
Date of Evaluation: 6/23/16

#### Suitability for Preservation is based on the following

Good - Trees with good health and structural stability that have the potential for longevity at the site.

Moderate - Trees in somewhat declining health and/or exhibits structural defects that cannot be abated with treatment. Trees will require more intense management and will have a shorter lifespan than those in the 'Good' category.

Poor - Trees in poor health or with significant structural defects that cannot be mitigated. Tree is expected to decline, regardless of treatment.

#### **Health Rating**

- 5 A healthy, vigorous tree, reasonably free of disease, with good structure and form typical of the species.
- 4 A tree with slight decline in vigor, small amount of twig dieback, minor structural defects that could be corrected.
- 3 A tree with moderate vigor, moderate twig and small branch dieback, thinning of crown, poor leaf color, moderate structural defects that may that might be mitigated with care.
- 2 A tree in decline, epicormic growth, extensive dieback of medium to large branches, significant structural defects that cannot be abated.
- 1 A tree in severe decline, dieback of scaffold branches and or trunk, mostly epicormic growth; extensive structural defects that cannot be abated.
- O Tree is dead.

|        | Tree le deda.                |   |  |  |  |  |  |  |  |  |  |  |
|--------|------------------------------|---|--|--|--|--|--|--|--|--|--|--|
|        | iations and Defini           |   |  |  |  |  |  |  |  |  |  |  |
|        |                              | Forked branches nearly the same size in diameter, arising from a common junction an lacking a normal branch union.  |  |  |  |  |  |  |  |  |  |  |
| CDB    | Dieback in Crown             | Condition where branches in the tree crown die from the tips toward the center.   |  |  |  |  |  |  |  |  |  |  |
| DB     | Dieback                      |   |  |  |  |  |  |  |  |  |  |  |
| I DBHI | Diameter at Breast<br>Height | Measurement of tree diameter in inches. Measurement height varies by City and is noted above.   |  |  |  |  |  |  |  |  |  |  |
| FB     | Fireblight                   | A disease in fruit trees resulting in burnt looking foliage.  |  |  |  |  |  |  |  |  |  |  |
| Н      | Hazardous                    | A tree that in it's current condition, presents a hazard.   |  |  |  |  |  |  |  |  |  |  |
| HD     | Headed                       | Poor pruning practice of cutting back branches. Often practiced under utility lines to limit tree height.   |  |  |  |  |  |  |  |  |  |  |
| IB     | Included Bark                | Structural defect where bark is included between the branch attachment so the wood can't join. Such defect can have a higher probability of failure.  |  |  |  |  |  |  |  |  |  |  |
| LN     | Leaning Tree                 | Tree leaning, see notes for severity.   |  |  |  |  |  |  |  |  |  |  |
| ML     | Multiple Leaders             | More than one upright primary stem  |  |  |  |  |  |  |  |  |  |  |
| MS     | Multi-stem                   | A tree having 2 or more trunks, either originating at grade or branching after DBH height measurement.  |  |  |  |  |  |  |  |  |  |  |
| ND     | Nitrogen Deficiency          | Deficiency often resulting in lack of growth and yellow or pale green leaves.   |  |  |  |  |  |  |  |  |  |  |
| PA     | Planting Area                |   |  |  |  |  |  |  |  |  |  |  |
| S      | Suckers                      | Shoot arising from the roots.   |  |  |  |  |  |  |  |  |  |  |
| SC     | Soil Compaction              | Compaction of soil around tree root system which can damage vitality.   |  |  |  |  |  |  |  |  |  |  |
| SD     |                              | Naturally or secondary conditions including cavities, poor branch attachments, cracks, or decayed wood in any part of the tree that may contribute to structural failure.   |  |  |  |  |  |  |  |  |  |  |
| SR     | Surface Roots                | Roots visible at finished grade.  |  |  |  |  |  |  |  |  |  |  |
| SS     | Sunscald                     | Injury to bark tissues on the trunk/branches caused by rapid temperature changes  |  |  |  |  |  |  |  |  |  |  |
| WU     | Weak Union                   | Weak union or fork in tree branching structure.   |  |  |  |  |  |  |  |  |  |  |
|        | Ordinance Tree               | A tree defined in this section herein below and whose removal or topping is covered by and subject to the provisions of chapter 13. Ordinance tree means any live or dead woody perennial plant characterized by having a main stem or trunk which measures 56" or more in circumference at a height of 24" above natural grade slope. A multi-trunk tree shall be considered a single tree and measurement of that tree shall include the sum of the circumference of the trunks of that tree at a height of 24" above natural grade slope. "Tree" shall include the plural of that term" (13.32.020). |  |  |  |  |  |  |  |  |  |  |

| TREE # | BOTANICAL NAME        | COMMON NAME         | TOTAL<br>DBH | CIRCUMF-<br>ERENCE | ORDINANCE<br>TREE | LOCATION                                       | NATIVE | HEALTH | PRESERVATION<br>SUITABILITY | NOTES   | RECOMMENDATIONS |

## **General Observations**

Site is irrigated with recycled water. However, many of the trees do not appear to be irrigated. The site is mostly flat with a drop off at the fence along Liberty Street.. Locations shown on map are approximate. Not all trees were surveyed. Preservation suitability based on consideration for preservation if site is developed, not necessarily current site conditions.

General Palm note: Most palms on the site appear to be unmaintained volunteers. Trees are typically not skinned or pruned, which leads to a much larger DBH reading and several years of dead fronds remaining on the tree. DBH in this table is reported as if trees were skinned.
