Summary

The National Citizen Survey™ (The NCS™) is a collaborative effort between National Research Center, Inc. (NRC) and the International City/County Management Association (ICMA). The survey and its administration are standardized to assure high quality research methods and directly comparable results across The NCS communities. The NCS captures residents' opinions within the three pillars of a community (Community Characteristics, Governance and Participation) across eight central facets of community (Safety, Mobility, Natural Environment, Built Environment, Economy, Recreation and Wellness, Education and Enrichment and Community Engagement). This report summarizes San José's performance in the eight facets of community livability with the "General" rating as a summary of results from the overarching questions not shown within any of the eight facets. The "Overall" represents the community pillar in its entirety (the eight facets and general).

By summarizing resident ratings across the eight facets and three pillars of a livable community, a picture of San José's community livability emerges. Below, the color of each community facet summarizes how residents rated each of the pillars that support it – Community Characteristics, Governance and Participation. When most ratings were higher than the benchmark, the color is the darkest shade; when most ratings were lower than the benchmark, the color is the lightest shade. A mix of ratings (higher and lower than the benchmark) results in a color between the extremes.

Ratings within the pillar of Community Characteristics tended to be similar to or lower than the national benchmarks. Ratings were lower than average for four of the eight facets including Safety, Mobility, Natural Environment and Built Environment. Within Governance, ratings for some aspects in the General category as well as aspects of Mobility, Recreation and Wellness, and Community Engagement were lower than those observed in other communities across the nation. Levels of Participation tended to be similar to those observed elsewhere except for those related to General aspects (below average), Mobility (above average) and Natural Environment (above average). This information can be helpful in identifying the areas that merit more attention.
