- Appendix C - EDR Report, Sanborn Fire Insurance Report, EDR Topographic Maps, the EDR-City Directory Abstract

1.0 EXECUTIVE SUMMARY

Envirocom performed a Phase I environmental Site assessment (ESA) for the properties located at 64, 70, 80, and 82 Glen Eyrie Avenue, San Jose California (Site), to identify potential for impact to the structure, soil, or groundwater of the Site from on-site or off-site sources of hazardous substances or petroleum hydrocarbon products. This ESA was performed in accordance with American Society for Testing and Materials (ASTM) guidelines for Phase I Environmental Site Assessment (ASTM E1527-13).

On May 11, 2018, Envirocom's representative visited the Site. The Site was situated in a residential area near downtown Willow Glen, San Jose, California. The Site consisted of two contiguous rectangular parcels of lands developed with residential structures. Each parcel was approximately 18,385 ft² with 2 single-family homes and 2 detached garages. The buildings at the Site consisted of a single story wood frame structure on concrete footings. The detached garages were constructed with wood on concrete slabs. A small guesthouse and a small green house were also observed at 80 Glen Eyrie Avenue address. A small old wood structure appeared to be a brooder house was located back of 64 Glen Eyrie Avenue address. A small old wood structure resembling a barn was observed back of 80 Glen Eyrie Avenue address. Assessor parcel numbers (APNs) for the Site are 264-57-026 and 264-57-027. At the time of Envirocom's visit, the Site was occupied. Site photographs are presented in Appendix A. Assessor parcel map for the Site, and Figure 1 showing the Site and its neighboring properties are included in Appendix B.

During the Site visit, Envirocom's representative did not observe evidence of stains, spills or release of hazardous material/waste or petroleum hydrocarbon products at the Site. No Underground Storage Tank/Aboveground Storage tank (UST/AST) was observed at the Site. No monitoring well was observed at the Site. The Site was not listed in any Federal, State, and Local agency databases associated with adverse environmental conditions. No land use practices that would have adversely impacted the Site were observed in historical aerial photographs, Sanborn Fire Insurance maps, and City directories.

The Site has been developed with the current structures in 1949 and early 1950s. Therefore, Suspect asbestos-containing materials (ACMs), lead-based paint (LBP) may exist at the Site. However, The ACMs and the painted surface were, generally, in stable conditions.

SUMMARY OF FINDINGS

Item	Location/Issues	Description of Condition
1	Site	No Recognized Environmental Condition ¹ was observed at the Site.
2	Off-Site Properties	Two properties (Rotten Robbie No 32, 1061 Lincoln Avenue, and Bantinich Property, 910 Lincoln Avenue) were identified with historical soil and groundwater contamination within 1/4-mile of the Site. Case closures have been issued to these properties indicating they pose no significant risk to human health and the environment.
3	De Minimis ² and Other Potential ³ Issues	No De Minimis or Other Potential Issues were identified as part of this assessment.

1) Recognized environmental conditions means the presence or likely presence of any hazardous substances or petroleum hydrocarbon products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum hydrocarbon products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws.

2) De minimis environmental conditions are considered to be minor in nature and are conditions that generally do not present a threat to human health or the environment and, generally, would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis are not recognized environmental conditions.

(3) Potential environmental condition means the potential presence of hazardous or petroleum products on or nearby property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, ground water, or surface water of the property; however, the risk is low.

Based on the above information, Envirocom recommends no further assessment for the Site.

Envirocom recommends surveying the structures at the Site for ACM, before demolition work.

2.0 OBJECTIVE

The objective of the ESA is to identify existing or potential conditions that may pose an environmental liability on the owner or the operator of the Site.

2.1 Purpose and Scope of Work

The purpose of the ESA is to identify the potential for impact to the structure, soil, or groundwater of the Site from on-site or off-site sources of hazardous substances or petroleum hydrocarbon products.

The ESA was performed in accordance with ASTM E1527-13, and included the following activities:

- Interview the Site's owner/agent to obtain general information and Site history.
- Site visit to observe current conditions, hazardous chemical usage, and storage practices.
- Site vicinity drive-by and reconnaissance of the neighborhood within a 1-mile radius of the Site, to identify any potential off-site sources of contamination based on the nature of activities in the area.
- Review historical aerial photographs of the Site and properties within its vicinity identifying land use practices of the Site and its adjacent properties), to evaluate any potential for impact to the soil and groundwater at the Site.
- Review the appropriate Federal and State lists of contaminated properties to determine if any property within a 1-mile radius of the Site is under Federal or State investigation for soil or groundwater contamination that could impact or contribute to the environmental impairment of the Site.
- Review of available records of the Santa Clara County Consumer and Environmental Protection Agency (CEPA) electronic files.
- Review of available records in the State GeoTracker and EnviroStor electronic databases.
- Review of available records provided by EDR.
- Summarize the findings in this report.

2.2 Limitations and Exceptions of Assessment

This report was prepared for the use of GEC Properties LLC., its agents, and representatives. The content and conclusion provided by Envirocom in this report are based on the available information, procedures and practices that are generally

accepted in the environmental consulting field in California and our professional judgment by reviewing the available data.

This assessment was based primarily on the information gathered from other individuals and entities such as the regulatory agencies, government databases, Site owner/agents, and various professionals related to ownership or activities of the Site. Regulatory agency files and lists may be incomplete, incorrect, or missing. Envirocom is not responsible for the accuracy of information provided by others that is in this report. No warranty, either expressed or implied, is made.

3.0 SITE OVERVIEW

3.1 Site Name

The Site is two contiguous parcels of residential properties with no name.

3.2 Site Address

The Site is located at 64 and 70 (on one parcel) & 80 and 82 (on second parcel) Glen Eyrie Avenue, San Jose, California.

3.3 Legal Description of the Site

The Site is identified with assessor parcel number 264-57-026 and 264-57-027. A copy of assessor parcel map for the Site is provided in Appendix B.

3.4 Description of Existing On-Site Structures and Improvement

On May 11, 2018, Envirocom's representative visited the Site. Buildings at the Site consisted of single-story wood frame residential structures on concrete footings with wood frame detached garages on concrete slabs. Exterior walls of the structures were covered with wood, stucco, and bricks. The roofs were covered with composition shingles. The structures were surrounded with landscaping and paved driveways. An old wood frame structure resembling a brood house existed back of 64 Glen Eyrie Avenue. An old wood structure resembling a barn existed back of 70 Glen Eyrie Avenue. A small wood structure resembling a guesthouse and a green house were observed back of 82 Glen Erie Avenue. Site photographs are presented in Appendix A.

4.0 SITE BACKGROUND/OPERATION HISTORY

4.1 Current Ownership

GEC Properties LLC. is identified as the current owner of the Site. The Site was purchased on April 27, 2018.

4.2 Prior Ownership

Brown Margaret Trustee & Brown Trust is identified as the previous Site's owner as of February 12, 1992.

4.3 Aerial Photograph Review

To better understand land use practices at the Site and its vicinity, Envirocom reviewed available historical aerial photographs, which were purchased from Environmental Data Resources (EDR) Photography Print Service on May 8, 2018. Envirocom reviewed thirteen available aerial photographs for the Site and its vicinity belonging to 1939, 1948, 1950, 1956, 1963, 1968, 1974, 1982, 2093, 2098, 2006, 1010, and 2014.

1939, 1948: These photographs showed east and south of the Site being developed with residential structures. North and west of the Site, across from Los Gatos Creek, were, predominantly, orchards. Three small structures resembling houses observed at the Site in the photographs.

1950, 1956: These photographs were similar to the above photographs, except the Site was developed with the present structures. West of the Site was developed with residential buildings. Mixed orchards and residential developments were observed north of the Site.

1963, 1968: These photographs showed that general area near the Site was completely developed with single family and multi-unit residential structures. No changes from previous photographs were observed at the Site.

1974-2014: The 1974 photograph shows Highway 280 approximately ¼-mile north of the Site. Several light commercial and industrial facilities were observed near the highway. No changes were observed at the Site and its general area.

Review of historical aerial photographs indicated that the Site had residential land use prior to 1940s. In late 1940s to mid 1950s the Site was developed with the present residential structures and remained the same to the present time. No major change was observed at the Site and its neighboring properties in the aerial photographs belonging to later dates.

Review of the aerial photographs did not reveal any recognized environmental condition associated with the Site.

Copies of the aerial photographs are presented in Appendix B.

4.4 Historical Fire Insurance Maps

Envirocom requested EDR to provide historical fire insurance maps for the Site on May 8, 2018. Envirocom reviewed fire insurance maps dated 1915, 1950, 1956, and 1966.

1915: This map showed the Site was one parcel of land. A barn was at the present 80 Glen Eyrie Avenue extending to the present 64 Glen Eyrie Avenue. A dwelling, a windmill, a water tank, and a wood frame structure were observed at the present 82 Glen Eyrie Avenue address.

1950: Except for 80 Glen Eyrie having the same structures, 64, 70, and 82 Glen Eyrie Avenue addresses were developed with structures resembling the present buildings at the Site. A brood house was observed back of 64 Glen Eyrie Avenue. The barn at 80 Glen Eyrie Avenue appeared to be converted to a garage.

1956: This map showed that 80 Glen Eyrie being redeveloped with the present structures. 1966 map was similar to 1956.

Review of the fire insurance maps confirmed that the Site has been used for residential purposes as early as 1915. The maps did not reveal any recognized environmental condition associated with the Site.

Copies of the Sanborn maps are presented in Appendix C.

4.5 The EDR-City Directory Abstract

Envirocom requested for the EDR City Directory Abstract to evaluate the potential liability and land use resulting from past activities at the Site. City directory information covered 1960, 1964, 1969, 1974, 1977, 1982, 1987, 1992, 1995, 2000, 2005, 1010, and 2014.

1955-2010: These directories identified individuals occupying 64 Glen Eyrie Avenue address.

1940-2014: These directories identified individuals occupying 80 Glen Eyrie Avenue address from 1940 through 2006. Katz Prints was recorded during 2010 and 2014 for this address.

1955-2006: These directories identified individuals occupying 82 Glen Eyrie Avenue address.

Reviewing the City directories confirmed that individuals have occupied the Site as early as 1940. They did not reveal land use practices that might have adversely impacted the environmental conditions of the Site.

A Copy of the EDR-City Directory Report is also presented in Appendix C.

5.0 ENVIRONMENTAL SETTING

5.1 Surface Water Characteristics

The Site is located approximately 300 feet south of Los Gatos Creek, and approximately 1 mile west of Guadalupe Creek.

5.2 Subsurface Geological and Soil Characteristics

The Site is approximately 122 feet above mean sea level.

Envirocom reviewed Report of Offsite Subsurface Investigation prepared for Willow Gas N Save located at 1096 Lincoln Avenue. The report was prepared by Golder Associates dated October 15, 2013.

The above report documented soil stratigraphy included a lower permeability zone consisting of interbedded units of clay, silty clay, and sandy silt mixture extending from the surface to a depth of approximately 22 feet below ground surface (bgs). Underlying this lower permeability zone was a unit of silty sand and sand (42'-80'). The deeper low permeability zone consists primarily of clay, silty clay, sandy silt, and clayey silt mixtures (80'-105').

5.3 Groundwater Characteristics

A 2017 groundwater monitoring event for the above property documented groundwater levels at approximately 32 feet bgs with north/northeast flow direction.

5.4 Drinking Water Quality

City of San Jose supplies drinking water to the Site.

6.0 SITE INSPECTION

6.1 Site Observations and Inquiries

The Site consists of 4 one-story residential structures (single family homes) on concrete footings with detached garages on concrete slabs in a, predominantly, residential area of downtown Willow Glen, San Jose, California. Landscaping was observed front and back of the residential structures. Paved driveways extended from Glen Eyrie Avenue to the garages on the sides and back of the structures. Some areas back of the Site were covered with gravel. Glen Eyrie Avenue and Multi-unit residential development situated north of the Site. A single-family residential property is located west of the Site. Multi-unit residential developments were located east and south of the Site. Figure 1 of Appendix B shows the Site and its neighboring properties.

Envirocom observed no visual evidence (i.e., stains, unnatural discoloration, stressed vegetation) of spills or releases of hazardous material/waste at the Site at the time of its visit. Photographs of the Site are presented in Appendix A.

6.2 AST/UST System and Pipelines

Envirocom observed no above ground or underground storage tank (AST/UST) or pipelines/vents at the Site. In addition, Envirocom observed no visual evidence of stains spills or releases of hazardous material/waste associated with AST/UST at the Site at the time of its visit.

6.3 Transformers and PCB Equipment

Fluorescent light ballast's contain polychlorinated biphenyls (PCBs), which are considered hazardous waste if discarded. Ballast manufactured after January 1, 1978, do not contain PCBs and should be labeled as such on the ballast. Ballast without non-PCB labels, therefore, shall be assumed to contain PCBs. The California Department of Toxic Substances Control (DTSC) does not have the authority to regulate the use of PCBs. Therefore, there are no DTSC regulations that would require removal of an item that contains PCBs such as transformers and fluorescent light ballast. DTSC hazardous waste regulations apply only when and if materials contain PCBs becomes a waste. Fluorescent light fixtures are being used in the building at the Site. However, Envirocom observed no discarded or defective ballast at the Site.

Transformers containing more than 50 parts per million (ppm) PCB are considered PCB transformers. Pacific Gas & Electric Company (PG&E) is responsible for overseeing operation and maintenance of transformers. Through a conversation with one of PG&E representatives, Envirocom was told that presently more than 90 percent of

transformers are non-PCB transformers in California. But if the transformer is non-PCB transformer, the owner has to pay for the inspection and chemical analysis. Envirocom did not observe any on-Site transformer. Two pole-mounted transformers were observed along Glen Eyrie Avenue. No sign of leak or damage was observed on the transformers, at the time of Envirocom's Site visit.

6.4 On-Site Regulated Substance Identification/Inventory

Other than small quantities of household chemicals and detergents, Envirocom did not observe hazardous substances or petroleum hydrocarbon products, or evidence of any area with distressed, discolored, stained, or dead vegetation at the Site.

The Site's photographs are presented in Appendix A.

6.5 Area Reconnaissance

Envirocom's representative performed a walk through the vicinity, and a drive-by within a 1-mile radius of the Site. The Site was situated in an area developed with single family and multi-unit residential structures. Retail stores were observed along Lincoln Avenue, downtown of Willow Glen.

6.6 Site Plan Drawing (s)

Figure 1 of Appendix B shows the Site and its neighboring properties.

6.7 Asbestos Containing Material

The Department of Toxic Substances Control (DTSC) has classified friable, finely divided, and powdered wastes containing greater than one percent (1.0%) asbestos as hazardous waste. Asbestos includes all mineralogical forms of chrysotile, amosite, crocidolite, tremolite, antophyllite, and actinolite. A friable material is one, which can be reduced to powder or dust under hand pressure when dry.

The federal government has banned production of friable asbestos-containing materials (ACMs) since 1979. Asbestos generally becomes a health hazard when the individual fibers become airborne and inhaled by the public. ACMs, therefore, are not considered health hazard if they are properly maintained, and not disturbed. No regulation requires property owners to remove ACMs as long as they are maintained properly. ACMs must be removed prior to demolition or renovations where its disturbance becomes imminent.

Section 25915, Division 20 of the California Health and Safety Code dated 1988 indicated that owners of public and commercial buildings constructed prior to 1979 must disclose the presence of asbestos to their tenants and workers doing business or work

in areas where they could be exposed to asbestos. Additionally, section 25915 also requires that knowledge of ACMs be disclosed during real estate transactions.

The structures at the Site were built in 1940s, therefore, they may contain ACMs. No asbestos survey was performed at the Site as it was not part of this assessment.

6.8 Lead-Based Paint

Lead-based paint (LBP) or other surface coatings are considered material that contain an amount of lead equal to, or in excess of, one milligram per square centimeter (1.0 mg/cm^2), more than 5,000 parts per million (ppm), or more than half of one percent (0.5%) by weight. Engineering controls and air monitoring shall be implemented during disturbance of chipping or deteriorated LBP to eliminate the risk of public and workers exposure.

Abatement projects producing hazardous lead waste must meet land disposal restrictions under Resource Conservation and Recovery Act (RCRA).

Cal-OSHA requires that worker's safety protection shall be implemented to prevent lead exposure above Permissible Exposure Level (PEL) during construction activities. PEL for lead is $50 \text{ } \mu\text{g/m}^3$.

Due to age of the structures, LBP and lead-containing paint (LCP) may be present at the Site. No lead survey was performed at the Site as it was not part of this assessment.

6.9 Radon Issues

Radon is a colorless, odorless, radioactive gas. It is generated from the natural decay of uranium that is found in almost all soils. It typically moves through the ground to the air above and into buildings through cracks and openings in the foundation.

The United States Environmental Protection Agency (EPA) considers 4 Pico curies per liter (pCi/L) Radon as the threshold of concern. A document, EPA's Map of Radon Zones for California dated September 1993, identified Santa Clara County as Zone 2. Zone 2 areas are predicted to have an average indoor radon screening potential of 2 and 4 pCi/L. Table 1 of the same document shows 1.4 pCi/l as a mean radon level surveyed in Santa Clara County during 1989 to 1990. Radon measurement was not performed at the Site, because it was not within the scope of this ESA. However, Based on the radon zone classification, radon does not appear to be a significant environmental concern at the Site.

6.10 Vapor Intrusion

Vapor intrusion screening was conducted in accordance with ASTM E1527-13. The scope of this screening was limited to visual field observations, review of EDR report, and other available information. It did not include the collection and laboratory analysis of air samples to confirm the presence of airborne contaminants by vapor intrusion inside the building. After reviewing available information from the EDR report and the GeoTracker database, Envirocom concludes that vapor intrusion is not a concern at the Site.

7.0 ENVIRONMENTAL REGULATORY AGENCY & OWNER/REPRESENTATIVE INQUIRIES

7.1 EDR Report

Envirocom obtained environmental records for the Site and its neighboring properties within 1-mile radius through a report (The EDR Radius Map™ Report With Geocheck®) prepared by Environmental Data Resources, Inc (EDR). The report was designed to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate. A copy of the EDR's Radius Map™ report is presented in Appendix C.

The Site was not listed in any of the Federal, State, or Local records in the EDR report.

Properties with historical soil and groundwater contamination due to leaking underground storage tanks (UST) were identified within ¼-mile radius of the Site in the EDR report. The closest properties to the Site were Rotten Robbie No 32, 1061 Lincoln Avenue & Bantinich Property, 910 Lincoln Avenue. However, Case closures have been issued to these properties indicating they pose no significant risk to human health and the environment.

7.2 Federal, State, and Local Agencies Databases

Envirocom reviewed available files for the Site and its neighboring properties at the State GeoTracker, EnviroStor databases.

No record was found for the Site in any of the above databases. A written request was submitted to Santa Clara County Consumer and Environmental Protection Agency (CEPA) to review any available records for the Site. CEPA had no files for the Site, according to an email response dated May 11, 2018.

Environmental record review for the nearby properties explained in above Section 7.1.

7.3 Owner/Representative Inquiries

On May 7, 2018, Envirocom interviewed Site's owner representative, Mr. Dan Askari, to inquire about history and environmental conditions of the Site. Mr. Askari indicated that to the best of his knowledge, the Site has always been residential property with no known adverse environmental conditions. He was not aware of any previous environmental assessment document being existed for the Site.

8.0 CONCLUSIONS AND RECOMMENDATIONS

8.1 Conclusion

Envirocom performed a Phase I ESA for the Site, to identify the potential for impact to the structure, soil, or groundwater of the Site from on-Site or off-Site sources of hazardous substances or petroleum hydrocarbon products. This ESA was performed in accordance with American Society for Testing and Materials (ASTM) guidelines for Phase I Environmental Site Assessment (ASTM E1527-13). Envirocom visited the Site on May 11, 2018.

No unusual activities indicative of land use practices that might have adversely impacted soil and/or groundwater of the Site with hazardous material or petroleum hydrocarbon products were observed in the historical aerial photographs or Sanborn Fire Insurance maps. No City directory suggesting activities that might have impacted soil and groundwater at the Site was identified in the EDR report. The Site was not listed in any Federal, State, or Local agency environmental databases.

Envirocom observed no visual evidence of stains; spills or release of hazardous material/waste associated with the ASTs, generators, or stored chemicals at the Site during the time of its visit.

ACM and LBP may be present in construction materials, and painted surfaces, respectively, at the Site.

8.2 Recommendations

Based on the above information, Envirocom recommends no further environmental assessment for the Site.

Bay Area Air Quality Management District (BAAQMD) requires performing asbestos survey at structures, which are planned for demolition.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/11/2017 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
LINCOLN AVENUE CLEAN	990 COE AVENUE	NE 0 - 1/8 (0.118 mi.)	B9	11

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/30/2018 has revealed that there are 6 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 12 LUST sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

SCVWD ID: 07S1E18P01

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 2 UST sites within approximately 0.25 miles of the target property.

State and tribal voluntary cleanup sites

VCP: Contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have request that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

A review of the VCP list, as provided by EDR, and dated 01/30/2018 has revealed that there is 1 VCP site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 5 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: MTBE / TBA / Other Fuel Oxygenates, Gasoline
Site History: Two soil investigations were completed at the Site by Geo-logic in April 1999 as part of the station upgrade. The station upgrade included removing and replacing the USTs, product piping, and fuel dispensers. The results of these investigations were presented in two reports dated April 16, 2003 (Report of Soil Sampling Below Waste Oil and Fuel Tanks Fuel Dispensers and Piping) and April 26, 2003 (Report of Soil Sampling of Piping Trenches). The results of the two investigations are summarized below. The USTs included one 500-gallon waste oil tank, one 5,000-gallon gasoline tank, and three 8,000-gallon gasoline tanks. All of the tanks were constructed of single-wall steel. No holes, cracks, or corrosion were reportedly observed on any of the USTs after they were removed from the excavation; however, some staining was observed near the southwestern perimeter of the base of the UST excavation and around the waste oil tank. Soil samples were collected from beneath the fuel dispensers and from the base of the UST excavation. The analytical results showed that the samples collected from beneath the fuel dispensers yielded non detectable results for total petroleum hydrocarbons as gasoline (TPHg), benzene, toluene, ethylbenzene, and total xylenes (BTEX), and methyl tert-butyl ether (MTBE), with the exception of one sample. This sample, collected from 3 feet bgs, yielded 14 milligrams per kilogram (mg/kg) of TPHg and 0.30 to 0.74 mg/kg of BTEX constituents. The analytical results of an additional soil sample collected at the same location from 4 feet bgs yielded 3.7 mg/kg of TPHg, and BTEX constituents ranging from non-detect to 0.08 mg/kg. Analytical results from soil samples collected from the base of the gasoline UST excavations contained TPHg at concentrations ranging from non-detect to 210 mg/kg. Concentrations of BTEX constituents ranged from non-detect to 8.3 mg/kg. MTBE was detected at concentrations ranging from non-detect to 0.77 mg/kg. Analyses of two samples collected beneath the waste oil tank showed that TPHg concentrations were 6.1 mg/kg and 10 mg/kg and benzene concentrations were 0.065 mg/kg and 0.14 mg/kg. Total petroleum hydrocarbons as diesel (TPHd), and oil and grease (O&G) were also detected in both soil samples. TPHd concentrations were 23 mg/kg and 19 mg/kg. O&G was detected at 130 mg/kg and 94 mg/kg. Also in April 1999, limited over excavation was conducted to remove impacted soils observed in the

WILLOW GLEN BEACON (Continued)

S108758068

tank excavation. The analytical results from soil samples collected from the base of the excavation following soil over-excavation showed that TPHg, BTEX, and MTBE concentrations were below laboratory reporting limits in all of the samples. O&G was detected in a soil sample collected from the base of the waste oil tank at a concentration of 11 mg/kg. Based on these results, Geo-logic recommended no additional sampling was required at the Site as part of the removal of the USTs, waste oil tank, and fuel dispensers. During the final phase of the April 1999 station upgrade, three soil samples were collected from the base of the product piping trenches. The soil samples were submitted to a laboratory and analyzed for TPHg, BTEX, and MTBE. None of these analytes were detected above laboratory reporting limits. Based on these results, the Santa Clara Valley Water District (SCVWD) issued a Fuel Leak Site Case Closure letter on January 31, 2000. The letter confirmed cleanup at the Site and completion of the investigation. As directed by the Regional Water Quality Control Board (RWQCB), in a letter dated January 9, 2003, Golder conducted an investigation at the Site to assess whether groundwater beneath the Site had been impacted by undetected releases of MTBE. The Site investigation included advancing four direct-push HydroPunch-type groundwater samplers into first encountered groundwater and collecting groundwater samples for analysis of fuel oxygenates. The approximate locations of the four borings, designated DP-1 through DP-4, are shown in Figure 2. The results from the analysis of the groundwater samples showed that MTBE concentrations were above laboratory reporting limits in all four groundwater samples. The highest concentration of MTBE (5,700 "g/l) was detected in the sample collected from boring DP-1 located east of the southeastern pump islands (see Figure 2). Based on an analysis of regional groundwater flows it appeared that DP-1 was situated up-gradient from the USTs and upgradient/side gradient from the dispenser islands. The lowest concentration of MTBE (1.8 "g/l) was detected in the groundwater sample from sample point DP-4, which is located north of the western pump island (inferred down-gradient of the fuel island and USTs). Tertamyl methyl ether (TAME) was detected in the groundwater sample from DP-3 at a concentration of 5.2 "g/l. Tert-Butyl alcohol (TBA) was detected in groundwater from two sampling points (DP-2 and DP-3) at concentrations of 5.4 and 230 "g/l, respectively. The results of the groundwater analysis indicate that MTBE is present in groundwater beneath the Site. However, the source for the MTBE was not identified. The results showed that the highest concentration of MTBE was in the boring located upgradient or side gradient from the USTs, piping, or dispensing equipment. The results of the MTBE groundwater investigation were reported in a letter to the RWQCB dated July 14, 2003. Golder conducted a Soil and Groundwater Investigation (SGI) at the Site in 2004. The SGI included installing three groundwater monitoring wells (MW-1, MW-2, and MW-3) and drilling one exploratory boring (EB-1). The locations of the three monitoring wells are shown on Figure 2. Groundwater elevation data showed groundwater flowing across the site towards the northwest at a shallow gradient. It is important to note that field screening analysis of soil samples and soil analytical results did not detect petroleum hydrocarbons within unsaturated soils and the petroleum hydrocarbon impacts were restricted primarily to the capillary fringe and saturated zone. The soil data did not reveal any pathway for vertical migration of petroleum hydrocarbons from a shallow source(s) to groundwater. The highest concentrations of petroleum hydrocarbons

S108758068

and MTBE were detected in the groundwater sample from monitoring well MW-1, which is located approximately 15 feet from the southeastern property boundary and up-gradient from the USTs and side gradient from the piping and dispensers. These results are similar to the results obtained from the MTBE groundwater investigation. Petroleum hydrocarbon concentrations typically decreased across the Site in the down-gradient direction (northeast). No petroleum hydrocarbons or fuel oxygenates were detected in a groundwater sample from well MW-3, which is located down gradient of the historical and current USTs and dispensing equipment. Golder Associates performed an additional SGI in 2006 to assess the extent of petroleum hydrocarbons and/or fuel oxygenates at and in the vicinity of the retail service station located on the Site. The SCVWD issued a letter dated July 13, 2004, requiring the additional Site investigation based upon the results of previous groundwater investigations showing that groundwater beneath portions of the Site are contaminated with petroleum hydrocarbons and MTBE. The scope of work included advancing seven cone penetrometer test (CPT) borings (CPT-1 through CPT-6, and CPT-8) and collecting discrete groundwater samples for chemical analysis. The locations of the seven CPT borings are shown on Figure 2. Data collected during the investigation was used to further evaluate the extent of the groundwater contamination beneath the Site and assess if these contaminants are stable and/or attenuating. In addition, the data was assessed to identify potential sources of contamination and preferential pathways for migration of contamination. TPHg and benzene, within the shallow zone, appear to be restricted to the southeastern half of the Site with the highest concentrations detected in well MW-1, which is located adjacent to the southeastern property boundary. The distribution of TPHg and benzene in the shallow zone appears to indicate a source for these compounds near the southeastern corner of the property that extends to the northwest. There is no record of any fuel storage, piping, or dispensing equipment ever being located near MW-1. MTBE within the shallow zone shows a more dispersed plume that encompasses the majority of the Site. However, similar to TPHg and benzene, the highest MTBE concentrations are located beneath the southeastern half of the property near monitoring wells MW-1 and MW-2. The MTBE plume does not appear to extend beyond the Site boundaries on the south-southwest (Willow Street) and northwest (Lincoln Avenue). Although no upgradient source(s) have been identified, all three plumes (MTBE, benzene, and TPHg) within the shallow groundwater zone appear to originate from the same or adjacent source(s), possibly from an unidentified location to the east. The distribution of TPHg and benzene in the deep (lower) groundwater zone is offset from the distribution for TPHg and benzene mapped for the shallow zone. Benzene in the deeper zone appears to be isolated in two areas on the Site; one near the southern corner of the property (CPT-3) and the other near the northern corner of the property (CPT-1). An isolated plume of TPHg within the deep water bearing zone appears to exist within the southwest corner of the Site. The plume does not appear to migrate off-site to the north, east, or west, and appears to end somewhere between the southern Site boundary and south side of Willow Street at CPT-4 (where TPHg was not detected above laboratory reporting limits). The highest concentrations of MTBE within the deeper zone were detected in two sampling points near the northern corner of the Site (CPT-1 and CPT-6). The MTBE plume extends from the northeast property boundary (and possibly from an unidentified

S108758068

upgradient source) toward the southwest. The MTBE plume does not appear to extend beyond the site boundaries on the south-southwest (Willow Street) and northwest (Lincoln Avenue). The MTBE and benzene plumes within the deep groundwater zone appear to originate from the same or adjacent source(s) located north of the Site. The TPHg plume within the deeper groundwater zone appears to originate from an isolated source near the southwest corner of the Site. In June 2009, Golder performed an additional groundwater investigation to define the vertical and horizontal extent of MTBE in groundwater. This work was performed according to Golder's 2007 Workplan along with stipulations included in the approved letter from the DEH. The results of this investigation will be submitted during the Third Quarter 2009. A portion of the proposed work is located on an adjacent property, which contains a Jack-in-the-Box restaurant. Golder will continue to work with Jack-in-the-Box to obtain the Site access agreement and will perform the offsite portion of the investigation once the agreement is in place.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

TSCA SUBMITTER

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

HAZARDOUS AIR POLLUTANT MAJOR

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

STATE MASTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Reclamation: Not reported
POTW: Not reported
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 09/23/2009
Comments: DTSC determined that site characterization is adequate as future Site land use will remain commercial/industrial. There are concentrations of lead and total petroleum hydrocarbons above unrestricted land use (i.e. residential) screening levels. The Site Risk Assessment recommended that the Site be deed restricted and a Land Use Covenant between DTSC and the Site owner will be put in place.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/11/2017	Source: EPA

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/05/2017	Telephone: 703-603-8704
Date Made Active in Reports: 04/07/2017	Last EDR Contact: 04/06/2018

	Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

	Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 12/11/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/26/2017	Telephone: (415) 495-8895

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

	Data Release Frequency: Quarterly

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-564-2501
Date Made Active in Reports: 04/10/2007	Last EDR Contact: 12/17/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water board's review found that more than one-third of the region's active disposal pits are operating without permission.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Universal Transverse Mercator:	Zone 10
UTM X (Meters):	597037.1
UTM Y (Meters):	4129736.2
Elevation:	122 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5640416 SAN JOSE WEST, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ENE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
SAN JOSE WEST	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data:*

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Cenozoic
System: Quaternary
Series: Quaternary
Code: Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: BOTELLA

Soil Surface Texture: clay loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: MODERATE

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	9 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.60 Min: 0.20	Max: 7.30 Min: 5.60
2	9 inches	41 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60
3	41 inches	76 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: No Other Soil Types

Surficial Soil Types: No Other Soil Types

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: No Other Soil Types

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Source: Department of Fish & Game

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations

Source: Department of Conservation

Telephone: 916-323-1779

Oil and Gas well locations in the state.

RADON

State Database: CA Radon

Source: Department of Health Services

Telephone: 916-324-2208

Radon Database for California

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRRA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Enviro Com were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Enviro Com were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDR's Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:**Coordinates:**

P.O.#	NA	Latitude:	37.311041 37° 18' 40" North
Project:	70 Glen Eyrie	Longitude:	-121.904971 -121° 54' 18" West
		UTM Zone:	Zone 10 North
		UTM X Meters:	597034.65
		UTM Y Meters:	4129940.15
		Elevation:	122.24' above sea level

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.
