EXECUTIVE SUMMARY

David J. Powers & Associates, Inc. retained McCloskey Consultants, Inc. to perform a Phase I Environmental Site Assessment (ESA) for Presentation High School, located at 2281 Plummer Avenue in San Jose, Santa Clara County, California. The purpose of this assessment was to identify Recognized Environmental Conditions (RECs) associated with the property as defined by ASTM E 1527-13, Standard Practice for Environmental Site Assessments.

The Site was cultivated with cherry orchards from as early as the late-1930s through the early-1960s. The original Presentation High School buildings were constructed on the eastern half of the Site in 1962, at which time the western half remained cultivated with orchards through the mid- to late-1960s. A small convent was constructed on the northwestern corner of the Site in the late-1970s/early-1980s, and was removed in 2003. Expansion of Presentation High School facilities onto the western half of the Site began in the mid-1970s, and all existing school facilities were present by 2005.

The 8.7-acre (378,972-square-foot) Site currently is developed with seven buildings and other facilities of Presentation High School. Structures and facilities at the Site include a main office/classroom building, student union/cafeteria, theater/classroom building, gym, chapel, additional classroom building, pool equipment building with cogeneration plant, swimming pool, assorted ball fields and associated courtyards, walkways, landscaping, and asphalt-paved parking areas and driveways. Demolition of the existing main office/classroom building, student union/cafeteria, and chapel is planned, followed by replacement of the facilities with new structures of similar use.

Standard agricultural practices utilized during historical cultivation of the Site with cherry orchards may have included application of persistent agricultural chemicals, including organochlorine and lead-arsenate pesticides. Residual pesticides and related metals, lead and arsenic could remain in shallow Site soils at concentrations exceeding regulatory standards.

Several of the structures on the Site have been present since the early-1960s. Additionally, historical structures were documented on the northeastern corner of the Site in the 1950s and 1960s and at the convent on the northeastern corner of the Site in the late-1970s through 2003. Based on the dates of construction, the paint on the aged/historical structures may have contained lead. Flaking lead-based paint (LBP) may have impacted soil along the building walls with lead. Additionally, application of pesticides and/or herbicides may have occurred around the building perimeters.

Based on the presence of ultramafic rock outcrops identified approximately 2 miles from the Site, naturally-occurring asbestos (NOA) could be present in on-Site soil at concentrations that some regulatory agencies could consider a potential long-term health hazard due to inhalation of asbestos fibers.

Reportable quantities of hazardous materials are present at the Site, related to a variety of school-related facilities. Liquid chlorine and sodium hypochlorite for swimming pool maintenance are maintained in above-ground storage tanks (ASTs) located in the pool/cogeneration building. Paints are utilized in the theater tech shop; a variety of laboratory chemicals are utilized in the chemistry lab and storage room. Evidence of spills and/or releases of these materials was not observed. The materials appear appropriately permitted with the appropriate regulatory agency. Hazardous wastes are not generated.

Based on the dates of construction for the main classroom and administrative office building and student union/cafeteria, building materials and coatings may include asbestos-containing materials (ACM) and lead-based paint (LBP). ACM also may be present in the gym based on the date of construction. Prior to the proposed renovation/redevelopment project, appropriate ACM and LBP surveys must be conducted and identified materials abated/appropriately managed.

Information contained in the database search report did not reveal the presence of vicinity properties appearing likely to have significantly impacted the Site through documented releases to soil and/or groundwater.

This ESA has revealed evidence of the following Recognized Environmental Condition (REC) in connection with the Site.

- Historical cultivation of the Site with orchards may have resulted in the presence of residual pesticides and pesticide-related metals, lead and arsenic, in shallow Site soils. The presence of aged and historical structures on the Site may have resulted in the potential presence of pesticides/herbicides from application around building perimeters and lead from flaking lead-based paint (LBP).
- The presence of NOA in Site soils.

ASSESSMENT FINDINGS MATRIX

Site Name: Presentation High School
 Site Address: 2281 Plummer Avenue, San Jose, Santa Clara County, California
 Site APN: 446-38-035
 Site Development Type: High School

Issue	Located?	Text Section(s)	Comments
Hazardous Materials and/or Hazardous Wastes	Yes	2.3, 8.6	Reportable quantities of hazardous materials associated with chemistry lab, swimming pool, and theater tech shop; no hazardous wastes generated.
55-Gallon Drums	No		
Above-ground Storage Tanks	Yes	2.3, 8.6	Pool chemical chlorine and sodium hypochlorite stored in ASTs in pool/cogeneration plant building.
Underground Storage Tanks	No		
Monitoring Wells	No		
Production Wells	No		
Visual Evidence of Hazardous Materials Release	No		
Transformers	No		
Impact to On-Site Soil and/or Ground Water	Possible	7.1, 8.2 & 8.3	Site historically cultivated with orchards and aged/historical structures present. Agricultural chemicals, lead, and arsenic may remain present in surficial soils. Building perimeters treated with pesticides and arsenic, flaking of LBP.
Off-Site Contamination of Potential Concern to Site	No		
Soil Vapor Intrusion Concerns	No		
Potential for Elevated Radon	Low	6.7	Santa Clara County is located in Radon Zone 2
Potential for Lead-Based Paint	Yes	8.3, 8.5	
Potential for Asbestos-Containing Building Materials	Yes	8.5	
Undocumented Fill	No		
Historic or Current Use of Site for:			
Dry Cleaner	No		
Gas Station	No		
Industrial/Manufacturing	No		
Auto Maintenance/Repair	No		
Landfill/Dump	No		
Additional Concerns	Yes	8.4	Naturally-occurring asbestos in Site soils.

1.0 INTRODUCTION

1.1 *Statement of Purpose*

McCloskey Consultants, Inc. (MCI) was retained by David J. Powers & Associates, Inc. to perform a Phase I Environmental Site Assessment (ESA) for Presentation High school, located at 2281 Plummer Avenue in San Jose, California. Based on information provided by HDC, renovation of the high school is planned, including demolition of the existing main office/classroom building, student union/cafeteria, and chapel, followed by replacement of the facilities with new structures of similar use.

The purpose of this study was to identify Recognized Environmental Conditions (RECs) associated with the property in accordance with the scope and limitations of the American Society of Testing and Materials (ASTM) E 1527-13, "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process. Exceptions and additions to the ASTM E 1527-13 scope were limited to those described in Sections 9.0 and 10.0. The scope of investigative activities and initial findings are summarized in the following sections.

This ESA has been prepared by MCI for the sole use of HDC (User); the ESA is valid for six months in accordance with ASTM guidelines.

1.2 *Scope of Assessment*

This ESA consisted of the following tasks:

- Performance of a Site reconnaissance;
- Review of historical Site uses and conditions;
- Review of environmental databases and other information;
- Interview of a representative of the Site owner/operator; and,
- Preparation of a report summarizing the findings, conclusions and recommendations.

2.0 SITE DESCRIPTION

2.1 *Site Location*

Presentation High School is located at 2281 Plummer Avenue, on the western side of Plummer Avenue approximately 485 feet south of Curtner Avenue, in San Jose, California (Figure 1). The Site consists of a single, irregularly-shaped parcel, identified as APN 446-38-035 by the Santa Clara County Assessor's Office (SCCAO), and is approximately 8.7 acres (378,972 square feet) in size.

2.2 Site Vicinity and General Characteristics

The Site vicinity is largely developed with single-family homes, with limited interspersed commercial development. Topography on the Site is generally level. The average Site elevation across the property is approximately 163 feet above mean sea level. The vicinity topography slopes gently towards the northeast. The northern and southern Site boundaries are delineated by fence lines between the school and adjoining residential and commercial properties. The western and eastern Site boundaries are delineated by sidewalks along Booksin Street (west) and Plummer Avenue (east).

2.3 Current Uses and Physical Description of the Site

The Site is developed with Presentation High School, a private girls' high school. School facilities include a main classroom and administrative office building on the eastern portion of the Site, with a student union/cafeteria building, theater/classroom building, additional classroom building, gym, chapel, and pool and pool equipment/cogeneration plant building located on the central portion of the Site. With the exception of the theater/classroom building, all Site structures are single-story buildings without basements. The theater/classroom building is a two-story structure constructed over a partial sub-grade level. Ball fields are present on the western portion of the Site, separated from the other facilities by asphalt-paved driveways and a parking lot. Asphalt-paved driveways and parking also are present along the northern and southern perimeters of the Site. Remaining areas of the Site are developed with courtyards, walkways, and landscaping.

A reconnaissance of the Site was conducted by Ms. Belinda Blackie of MCI. Ms. Blackie was accompanied at the time of her reconnaissance by the facilities manager for Presentation High School, Mr. Cary Atkinson. During the reconnaissance, several representative classrooms, administrative offices and other school facilities, including the cafeteria, theater, gym, and chapel, were accessed or viewed through exterior windows. Additionally, interiors of rooms where hazardous materials storage was reported to be stored by Mr. Atkinson were accessed, including the chemistry lab/storage room, heater room/janitorial storage room, theater tech shop, elevator room, pool building/cogeneration plant, and exterior storage shed. The natural-gas generators were inaccessible at the time of the reconnaissance. No significant Site access limitations were encountered.

Four heater rooms were reported within the main classroom and administrative office building. The heaters are natural-gas fired units. One of the heater rooms was accessed at the time of the reconnaissance, and was observed to house storage of multiple up to 1-gallon containers of assorted janitorial cleaning materials and soaps in addition to the heating unit. A natural gas-fired emergency generator is also located exterior to the main classroom/administrative office

building. Access to the generator was unavailable at the time of the reconnaissance. Also within the main classroom and administrative office building was the chemistry lab and storage room. The chemistry lab had a vented fume hood and several laboratory sinks. Multiple very small bottles of laboratory solutions were staged in the fume hood. One flammable and two corrosive materials storage cabinets were observed within the lab; the cabinets were locked and inaccessible. Based on the size of the cabinets, storage of only small containers of hazardous materials is surmised. Numerous small (up to 1-gallon, but primarily 1 liter or less) containers of assorted inorganic and organic reagents, solutions, and indicators and stains were housed in the chemistry storage room, primarily in wall-mounted shelving units.

The student union/cafeteria building included a lounge and dining area as well as a food-prep kitchen and offices. Commercial kitchen equipment was present within the kitchen, including a stove with hood and walk-in freezer. Hazardous materials were not observed within this building, with the exception of small quantities of typical cleaning/sanitizing materials. The chapel included a small sanctuary as well as offices. Hazardous materials were not observed within the chapel building.

The theater/classroom building, the only multiple story structure on the campus, was a two-story structure constructed over a basement/partial sub-grade level. The Valenzuela Theater was located in the eastern portion of the building, including a tech shop, stage and seating area. Within the tech shop were observed multiple 1- and 5-gallon containers of assorted paints, as well as numerous cans of spray paints, stored on shelves, in cabinets and on the concrete slab floor. Minor paint spills were observed. Smaller quantities of paints were also present in the wings of the stage, primarily on a table and wheeled cart. The remainder of the theater/classroom building consisted of classrooms and a basement/partial sub-grade level included classroom space as well as a music studio. The three levels of the theater/classroom building are serviced by a single hydraulic elevator. Observation of the elevator equipment room did not reveal indication of leakage from the elevator motor. The most-recent 1-year hydraulic test was completed in January 2016. The elevator operating permit (temporary) was valid through September 17, 2017.

The theater/classroom building was connected to the final classroom building. In the breezeway between the buildings was what appeared to be a pottery kiln with two large cylinders of propane. No other hazardous materials were observed inside the classroom building. The building was also connected to the gym. Within the gym were a concession stand with small kitchen, weight room, dance studio, basketball court, training room, locker rooms, electrical room and a janitorial closet. Several 1-gallon containers of assorted janitorial materials were observed within the janitorial closet. Very small quantities of medical-related materials were observed within the training room. A small storage shed located immediately

outside of the gym building reportedly was utilized to store small containers of gasoline for a tractor, but none was observed in the shed at the time of the reconnaissance. Two small cylinders of propane were observed within the shed however. A natural gas-fired emergency generator was located within an enclosed area at the corner of the theater. Access to the generator was unavailable at the time of the reconnaissance.

The pool equipment/cogeneration plant building was located at the western end of the pool deck, and housed a pool equipment storage room, pool chemical storage rooms, cogeneration unit and pool filter equipment. The cogeneration plant within the building was a natural-gas fired unit and utilized to heat the pools. The cogeneration unit was located in the room with the pool filter equipment and a sub-grade concrete vault housing piping and a pump. Pool chemical storage included a 220-gallon plastic above-ground storage tank (AST) of hydrochloric acid within one room and a 500-gallon plastic AST of sodium hypochlorite in an adjoining room. The ASTs did not appear to be secondarily contained; evidence of leaks or releases was not observed.

A summary of Site features is presented in Table 1. Site photos are included in Appendix A.

Table 1. Summary of Site Features

Feature	Observed	Not Observed	Comments
Above-ground storage tanks	✓		220-gallon hydrochloric acid AST and 500-gallon sodium hypochlorite AST for pool maintenance located within pool building; ASTs did not appear secondarily contained.
Agricultural/Irrigation wells		✓	
Domestic wells		✓	
Drains or sumps	✓		Concrete piping/pump sump located within pool building cogeneration plant/pool filter room.
Drums		✓	
Hazardous substances and/or petroleum products	✓		Pool maintenance chemicals (ASTs), paints, laboratory reagents, and typical janitorial and maintenance chemicals observed at several locations.
Odors		✓	
Pits, ponds or lagoons		✓	

continued

Table 1. Summary of Site Features (continued)

Feature	Observed	Not Observed	Comments
Pools of liquid		✓	
Septic system		✓	
Solid waste		✓	
Stained or corroded soil and/or Pavement		✓	
Stressed vegetation		✓	
Transformers		✓	
Underground storage tanks		✓	
Wastewater		✓	

2.4 Current Uses of the Adjoining Properties

The Site is located in a primarily single-family residential neighborhood of San Jose, with a few commercial facilities also present. Single-family residences and St. Christopher’s Church and School adjoin the Site to the north, with single-family residences and the Herman Health Care Center (2295 Plummer Avenue) adjoining south. Booksin Street adjoins the Site to the west and Plummer Avenue to the east, both followed by single-family residences.

3.0 USER- AND OWNER-PROVIDED INFORMATION

As part of this study, Mr. Cary Atkinson of Presentation High School completed environmental questionnaires regarding the Site. The environmental questionnaires are used to obtain current and historical information relating to the Site. The questionnaires were completed by Mr. Atkinson on December 20, 2017; copies are included in Appendix B. Follow up questions regarding the questionnaire were answered by Mr. Robert Hencken of HDC on December 21, 2017. Information obtained through the questionnaires is summarized below, with further detail included in the appropriate sections of this report.

Based on information provided by Mr. Atkinson, chemical use at the subject property includes the chemistry lab in Room 5. Chemical disposal is provided by Clean Harbors. Natural-gas fired emergency generators provide backup power to the theater and server room (located within the main classroom building). The original main classroom building at the school was constructed in 1962, the gym in 1985, the chapel and athletic complex in 1995, the theater in 2002 and the sports fields and aquatic center in 2005. Demolition of the existing main

office/classroom building, student union/cafeteria, and chapel is planned, followed by replacement of the facilities with new structures of similar use. Mr. Hencken was unaware of past spills or chemical releases or cleanup activities conducted on the property.

Mr. Atkinson was not aware of any indications of contamination on the Site, and reported no knowledge of environmental cleanup liens, activity and land use limitations, or pending, threatened or past litigation or administrative proceedings related to hazardous substances or petroleum products at the Site. He also reported no receipt of notices from governmental entities regarding possible violation of environmental laws or liability related to the same.

4.0 PAST SITE OWNER/OCCUPANT INTERVIEWS

Past Site owner and/or occupant names and contact information were unavailable, and therefore interviews were unable to be conducted.

5.0 REVIEW OF PREVIOUSLY-PREPARED ENVIRONMENTAL DOCUMENTS

No previously-prepared environmental documents were provided for MCI's review by the User or Owner; none were reasonably ascertainable in the sources researched for this study.

6.0 RECORDS REVIEW

6.1 *Hydrogeology*

Presentation High School is located in the central portion of the Santa Clara Valley. Santa Clara Valley is located within the Coast Ranges geomorphic province, consisting of the northern and southern Coast Ranges, composed of Mesozoic and Cenozoic sedimentary strata separated by a depression containing the San Francisco Bay. Soils in the vicinity of the Site are categorized by the USDA Soil Conservation Service as Botella. Botella soils are moderately-well- and well-drained, clay loam soils with moderately coarse textures (EDR 2017).

The Site is located within the Santa Clara Valley Groundwater Basin, Santa Clara Subbasin. Water-bearing formations of the Santa Clara Subbasin include Plio-Pleistocene and Holocene-age continental deposits of the Santa Clara Formation and Pleistocene-Holocene Alluvium. Based on hydrogeological information available for the Site vicinity on the State Water Resources Control Board (SWRCB) Geotracker database, shallow groundwater is expected at depths of approximately 68 to 75 feet. The groundwater flow direction was reported to be variable based on location, but primarily in a northwesterly to northeasterly direction. Based on topography in the immediate Site vicinity, a more northeasterly flow direction is anticipated.

6.2 Environmental Record Database Review

Various Federal and State regulations require that government agencies maintain records of environmental permits, records of properties generating, handling or storing hazardous materials, records of properties impacted by regulated compounds, and records of properties under investigation by the government for alleged violations of hazardous material regulations. Environmental Data Resources, Inc. (EDR), a specialized research firm, was contracted to provide an electronic search of these databases, meeting the minimum search distances as outlined in ASTM E1527-13. A listing of the databases searched and the dates the database information last was updated are provided in the EDR Radius Map report included in Appendix C.

6.2.1 Site Records

The Site was listed on the FINDS, NPDES, CUPA Listings, San Jose Hazmat and EMI regulatory agency databases included in the report. The NPDES listing appears related to permitted water discharge during previous construction activities conducted between 2004 and 2008; no violations were reported. The CUPA Listings database entry indicated Presentation High School had a hazardous materials business plan (HMPB) with one to three chemicals and generated less than 100 kilograms of hazardous waste per year. The San Jose Hazmat listing indicates, similarly, the presence of hazardous materials at the Site, which is classified as a Miscellaneous Simple Facility. The EMI database indicated air emissions, presumably from the cogeneration plant (Section 2.3), of well less than 1 ton/year of total organic hydrocarbon gases, reactive organic gases, carbon monoxide, oxides of nitrogen, oxides of sulfur, and particulate matter from 2006 through 2015 (the most recent year for which data was available). The FINDS database listing was related to the EMI listing and provided no further information.

Based on the available information, none of the regulatory agency database listings are considered to be of concern to the environmental condition of the Site.

6.2.2 Vicinity Facility Records

Listings for off-Site facilities in the EDR report, including those identified as “orphan” facilities unable to be plotted due to incorrect or insufficient address information, were reviewed for their potential to impact the Site. No orphan facilities of potential concern were identified. None of the listed off-Site facilities appeared to be of significant concern to the Site.

6.3 Soil Vapor Intrusion Evaluation

As part of this study, a Tier 1 screening assessment of the potential for vapor encroachment conditions (VECs) to exist at the Site was conducted in general accordance with ASTM E-2600-10. The Site, adjoining properties, and properties located up-gradient from the Site, with

respect to anticipated groundwater flow, were evaluated for the potential to create a VEC at the Site. Using information from the EDR electronic database search report previously referenced in Section 7.2, releases were evaluated based on the type of chemical and the distance to the Site. If a petroleum hydrocarbon plume was reported within 1/10 mile of the Site, or a volatile organic hydrocarbon (non-petroleum hydrocarbon) plume was reported within 1/3 mile of the Site, in a hydraulically up-gradient direction, it was presumed a VEC could exist at the Site and additional screening may be warranted. Criteria regarding the distance and direction of a potential release facility from the Site may be modified based on professional judgment. Recommendations for additional screening are based on criteria including Site use/proposed Site use, type of Site structure, physical setting, depth to groundwater, soil type, and presence of natural and/or man-made conduits.

Based on evaluation of the above criteria, the potential for a VEC to exist at the Site related to documented on-Site and off-Site releases appears very low, as no significant petroleum hydrocarbon releases were reported within 1/10 mile or volatile organic hydrocarbon releases were reported within 1/3 mile in a hydraulically up-gradient direction from the Site. Additional screening is not recommended at this time.

6.4 Local Regulatory Agency Record Sources

On November 16, 2017, MCI requested available hazardous materials files and documents related to the presence or absence of environmental conditions and activities on the Site available from the Santa Clara County Environmental Health Department (SCCEHD), and on December 5, 2017 MCI reviewed available San Jose Fire Department (SJFD) records on-line through the City of San Jose on-line permit database.

The SCCEHD provided California Environmental Reporting System (CERS) Business Activities Form/HMBP for Presentation High School, dated September 20, 2017. A copy of the document is included in Appendix D. The form indicated that 70 cubic feet of liquefied petroleum gas, 500 gallons sodium hypochlorite, 220 gallons hydrochloric acid and 55 gallons latex paint (in 5-gallon or smaller containers) were stored/utilized at the Site. No underground storage tanks (USTs) were reported. Hazardous waste reportedly was not generated.

A hazardous materials notice of inspection, dated October 2011, also was provided by the SCCEHD. Reportable quantities of hazardous materials included 220 gallons hydrochloric acid, 500 gallons sodium hypochlorite, 55 gallons latex paint and 70 gallons propane. Hazardous materials stored at non-reportable quantities included sodium bicarbonate, chemistry, art glazes, aerosols and photo developer/fix. Inspection notes indicated that chemistry lab acids and bases were neutralized and disposed down the drain and that metal-bearing solutions were

evaporated and the concentrate disposed to the trash. A sink in the art lab reportedly had a “clay trap.” Paints in the theater/drama area were stored without secondary containment.

SJFD files had only limited hazardous materials-related documentation. An August 2004 permit for apparent new construction of the swimming pool and pool “house” indicated a hazardous materials installation permit was required for two corrosive liquid storage tanks and associated piping planned for installation; secondary was required to hold the capacity of the container. A March 2005 permit application was for installation of one 500-gallon polyethylene 12% sodium hypochlorite AST and one 150-gallon 10% hydrochloric acid AST. Documentation regarding construction of the ASTs indicated they were double-walled/dual-containment tanks.

6.5 BAAQMD

On November 16, 2017, MCI requested available air emission permit files for the Site at the Bay Area Air Quality Management District (BAAQMD). The BAAQMD had a current permit for the cogeneration plant at the facility, indicating emissions of 0.04 ton/year particulates, 0.20 ton/year organics, 0.14 ton/year nitrogen oxides, and 0.55 ton /year carbon monoxide. The plant reportedly was installed in 2005. The BAAQMD also had record of an asbestos abatement permit from demolition activities conducted in 2014.

6.6 On-Line State Regulatory Agency Record Sources

In addition to requesting files available at the local regulatory agencies, the on-line SWRCB Geotracker website and the California Department of Toxic Substances Control (DTSC) Envirostor website were reviewed. The Site was not included on either database. In addition, no vicinity facilities of potential concern were identified on the Geotracker or Envirostor databases.

6.7 Potable Water Source, Power Source, and Method of Sewage Disposal

Potable water for the Site is provided by the San Jose Water Company. Sewage disposal is facilitated by the City of San Jose.

Natural gas and electricity for the Site is provided by Pacific Gas and Electric Company (PG&E). No PG&E overhead power lines or transformers were observed on the Site; overhead lines extended along the eastern side of Plummer Avenue.

6.8 State and Federal Radon Testing Data

Federal and State radon screening test data for the Site zip code of 95125 were included in the EDR radius map report included in Appendix C. Based on information provided in that report, one Federal and 90 State radon screening tests have been performed within the Site zip code.

The Federal radon screening test of the 1st floor living area reported average radon activity at 1.000 pCi/l, beneath the USEPA recommended action level of 4 pCi/l. State tests reported seven of 90 (7.8%) demonstrating radon concentrations exceeding the 4 pCi/l action level. Santa Clara County is reported in Federal EPA Radon Zone 2, with average indoor radon levels between 2 and 4 pCi/l.

6.9 Public, State, and Federal Well Data

Federal, State and public well location data was obtained from EDR in the report included in Appendix C. Review of the Federal, State, and public well database information did not indicate the presence of wells on the Site.

6.10 Oil and Natural Gas Wells

Visual observation of the Site and vicinity was conducted, as was review of Department of Oil, Gas and Geothermal Resources (DOGGR) maps available on the DOGGR website. No gas wells or dry holes were reported on the Site or in the vicinity.

6.11 Naturally-Occurring Asbestos

The California Department of Conservation General Location Guide for Ultramafic Rocks in California was reviewed to evaluate the presence of potential NOA in the immediate vicinity of the Site. The nearest outcrop of Ultramafic rock that could contain NOA is documented just under two miles to the east (Department of Conservation, 2000).

7.0 HISTORICAL REVIEW

7.1 Topographic Maps and Aerial Photographs

A review of historical information was performed to identify past uses of the Site and adjacent properties that may pose an environmental concern. The following historical sources were reviewed:

- Aerial photographs from the years 1939, 1948, 1950, 1956, 1963, 1968, 1974, 1982, 1993, 1998, 2005, 2009, 2010 and 2012 obtained from EDR, Inc. on November 16, 2017;
- USGS 7.5- and 15-minute topographic maps from the years 1889, 1897, 1899, 1953, 1961, 1968, 1973, 1980, and 2012 obtained from EDR, Inc. on November 16, 2017; and

- Sanborn Fire Insurance Company maps were reported by EDR to be unavailable for the Site and vicinity.

Copies of these aerial photographs and maps are included in Appendix D. The following observations were made from the available sources.

7.1.1 Site Observations

1889 - 1899: Two small structures were depicted on the eastern portion of the Site, although the exact location of the Site was difficult to discern due to the lack of current landmarks.

1939 & 1948: The Site was cultivated with orchards. Small structures associated with an apparent residential property within the orchard appeared north of the Site property line.

1950 - 1961: The Site remained cultivated with orchards, with the northeastern corner appearing to have been developed with one to two small structures. The resolution of the photograph made details of Site development difficult to discern.

1963: The eastern half of the Site had been developed with the existing main classroom and administrative office building and student union/cafeteria building. Asphalt-paved surface parking had been constructed along the northern property line as well as northwest of the buildings. The western half of the Site remained planted with orchards.

1968: The Site remained generally similar, with orchards no longer present on the western half of the Site.

1974: The eastern half of the Site remained developed with the two original buildings and parking lot. The western half remained largely undeveloped, but one grass field was present adjoining west of the parking lot and a pathway from the parking lot extended to what appeared to be tennis courts and a handball wall on the southwestern corner of the Site.

1982: The Site remained generally similar, with what appeared possibly to be four small structures present on the northwestern corner of the Site, adjoining north of the tennis courts.

1993: The existing gym had been constructed on the Site, with a ballfield also added in the location of the existing softball field. The remainder of the Site was similar to that documented previously.

1998: The existing chapel and surrounding courtyard, as well as the additional classroom building south of the gym had been added to the high school. Additional parking lots along the northern property line also were present. Four tennis courts now were visible, with two additional courts replacing the former handball wall.

2005: The theater/classroom building had been constructed and the ballfields extended west to Booksin Avenue. The four structures previously present on the northwestern portion of the Site had been removed. The existing swimming pool and pool building appeared under construction on the northern portion of the Site.

2009 - 2012: The Site was developed with all the existing facilities of Presentation High School.

7.1.2 Site Vicinity/Adjoining Property Observations

1889 - 1899: Plummer Avenue and a portion of Booksin Avenue adjoined the Site to the west and east; Curtner Avenue also was depicted. Small structures were present along streets in the vicinity.

1939: The vicinity was completely cultivated with orchards. A development with two small structures was located within the orchard adjoining north of the Site. Adjoining south of the Site was an additional development with several small structures and a cleared area.

1948: The vicinity remained largely cultivated with orchards, however property adjoining southeast of Plummer Avenue was cultivated with field crops. Multiple small structures had been constructed on the previously cleared area adjoining south of the Site; additional structures also had been constructed on the property adjoining south of the southeastern corner of the Site. Residential development had increased throughout the more distant vicinity as well, including tract housing a short distance east and northwest.

1950 & 1953: Adjoining properties remained similar, as did vicinity properties. A school had been constructed to the northeast.

1956: Two structures were visible on the St. Christopher's Church property adjoining north of the Site, with the remainder of the northern adjoining property remaining an orchard with small structures. One of the previous developed areas adjoining south of the Site had been replanted with orchards; multiple structures remained present on the other previously developed portion of that property. Orchards remained present adjoining west and east of the Site, with residential tracts present adjoining northeast and southeast. Increased residential development was visible throughout the vicinity, with many orchards remaining as well.

1961 - 1974: The existing St. Christopher's Church and School facilities were present adjoining north of the Site and the existing Herman Health Care Center had been constructed adjoining south. Many of the residences adjoining south along Edmond Court also had been constructed, as had the existing residences adjoining east of Plummer Avenue and west of Booksin Street. The existing residence adjoining north of the Site along Plummer Avenue was present, with the remainder of that area still cultivated as an orchard. The remainder of the Site vicinity was largely residentially developed, with a few plots of orchards left.

1980 - 2012: The vicinity was developed to the existing configuration, including the residential tract adjoining north and all the residences adjoining south along Edmond Court. The entire vicinity was developed, with no orchards remaining present.

7.2 City Directories

A review of city directories for the Site vicinity was performed by EDR and the summary report is included in Appendix D. City directories for the Site vicinity were available for the years 1955 through 2014. The Site address was listed as Presentation High School from 1963 to 2006 and as Sisters of Presentation in 2010 and 2014. Vicinity listings largely were for individuals, apparent home-based businesses, and religious facilities. The property adjoining south was listed as The Herman Sanitarium in 1955 through 2014 as well as Herman Health Care Center in 2010 and 2014. None of the documented vicinity facilities appear to have utilized significant quantities of hazardous materials or to otherwise be of concern to the environmental condition of the Site.

7.3 Building Department Records

San Jose Building Department (SJBD) and Planning Department (SJPD) files were reviewed on-line through the City of San Jose on-line permit database on December 5, 2017. Permits dating back to 1994 were available. A site plan dated 1994 indicated the four small structures previously located on the northwestern corner of the Site were a convent, which remained present through at least 2003. The existing chapel was permitted in 1994/1995, the theater/classroom building in 2001, and the existing ballfields in 2003/2004. The swimming pool, associated building and cogeneration unit were permitted in 2005. The second story of the additional classroom building was permitted in 2013/2014.

7.4 On-Line Research

Presentation High School was researched on-line utilizing the Google search engine on December 5, 2017. According to the Presentation High School website, ground breaking for the school on a former cherry orchard occurred in February 1962, with classes beginning in October 1962. The gym was constructed in 1985, the chapel in 1995, the theater/classroom building in 2002, and the pool in 2005.

8.0 FINDINGS, OPINIONS AND RECOMMENDATIONS

This ESA of Presentation High School, located at 2281 Plummer Avenue in San Jose, California has been performed in conformance with the scope and limitations of ASTM Practice E 1527-13. Any exceptions to, or deletions from, this practice are described in Sections 9.0 and 10.0 of this report.

This ESA has revealed evidence of the following REC in connection with the Site.

- Historical cultivation of the Site with orchards may have resulted in the presence of residual pesticides and related metals, lead and arsenic, in shallow Site soils. Additionally, the presence of aged and historical structures on the Site may have resulted in the potential presence of pesticides/herbicides from application around building perimeters and lead from flaking LBP.

Results of the research performed for this study are summarized in the following sections.

8.1 Site Use

8.1.1 Current

The Site is developed with seven buildings and other facilities of Presentation High School. Structures and facilities at the Site include a main office/classroom building, student union/cafeteria, theater/classroom building, gym, chapel, additional classroom building, pool equipment building with cogeneration plant, swimming pool, assorted ball fields and associated courtyards, walkways, landscaping, and asphalt-paved parking areas and driveways.

8.1.2 Historical

The Site was cultivated with cherry orchards from as early as the late-1930s through the early-1960s. Two very small structures may have been located on the northeastern portion of the Site in the 1950s and 1960s as well.

The original Presentation High School buildings were constructed on the eastern half of the Site in 1962, at which time the western half remained cultivated with orchards through the mid- to late-1960s. Expansion of Presentation High School facilities onto the western half of the Site began in the mid-1970s. The school gym was constructed in 1985, with the chapel and additional classroom building constructed in 1995 and theater/classroom building added in 2002. The pool facilities were completed in 2005.

A small convent was constructed on the northwestern corner of the Site in the late-1970s/early-1980s, and was removed in 2003.

8.2 Presence of Agricultural Chemicals

Standard agricultural practices utilized during historical cultivation of the Site may have included application of persistent agricultural chemicals, including organochlorine and lead-arsenate pesticides. Residual pesticides and related metals, lead and arsenic, to remain in Site soil is possible.

8.3 Aged/Historical Structures

Several of the structures on the Site have been present since the early-1960s. Additionally, historical structures were documented on the northeastern corner of the Site in the 1950s and 1960s and at the convent on the northeastern corner of the Site in the late-1970s through 2003. Based on the dates of construction, the paint on the aged/historical structures may have contained lead. Flaking LBP may have impacted the limited areas of exposed soil in a narrow strip adjacent to the building walls. Additionally, it was a fairly common practice to apply pesticides and/or herbicides around building perimeters to control pests and weeds.

8.4 NOA

Based on the presence of ultramafic rock outcrops identified approximately 2 miles from the Site, NOA may be present in on-Site soils that could exceed regulatory standards for schools.

8.5 Asbestos-Containing Building Materials and Lead-Based Paint

Based on the dates of construction for the main classroom and administrative office building and student union/cafeteria, building materials and coatings may include ACM and LBP. ACM also may be present in the gym based on the date of construction. A permit for abatement of some ACM during a demolition project was documented in 2014. Specifics on the quantity and location of the material abated was unavailable. Prior to the proposed renovation/redevelopment project, appropriate ACM and LBP surveys must be conducted and identified materials abated/appropriately managed.

8.6 Hazardous Materials

Reportable quantities of hazardous materials are present at the Site related to a variety of school-related facilities. Liquid chlorine and sodium hypochlorite for swimming pool maintenance are maintained in ASTs located in the pool/cogeneration building. Paints are utilized in the theater tech shop and a variety of laboratory chemicals are utilized in the chemistry lab and storage room. Evidence of spills and/or releases of these materials was not observed. The materials appear appropriately permitted with the appropriate regulatory agency. Only small quantities of hazardous wastes are generated, and were disposed by Clean Harbors, Inc.

8.7 Concerns with Vicinity Properties

Information contained in the database search report did not reveal the presence of vicinity properties appearing likely to have significantly impacted the Site through documented releases to soil and/or groundwater.

8.8 Soil Vapor Intrusion

The potential for a VEC to exist at the Site appears very low. No significant petroleum hydrocarbon releases were reported within 1/10 mile or volatile organic hydrocarbon releases were reported within 1/3 mile in a hydraulically up-gradient direction from the Site. Additional screening is not recommended at this time.

9.0 DEVIATIONS

The following deviations to ASTM Practice E1527-13 occurred due to data gaps, as summarized below.

Data gaps result from insufficient information availability for the Site, which may hinder the ability of the study to adequately distinguish RECs. The following data gap was encountered.

- Gaps of greater than 5 years were present in review of the available historic reference sources; additional sources were not reasonably ascertainable. Based on the development type and consistency through the time gaps however, this data gap is not considered significant.

10.0 ADDITIONS

The following additions to ASTM Practice E1527-13 were made:

- Radon data for the Site vicinity was reviewed;
- NOA location information for the Site vicinity was reviewed;
- State and Federal well data for the Site vicinity was reviewed; and,
- Department of Oil and Gas maps for the Site were reviewed.

12.0 LIMITATIONS

This ESA is intended to serve as an appropriate and reasonable inquiry regarding releases or threatened releases of hazardous substances and some naturally-occurring hazards on, at, or to the property that could be the subject of a response action for which a CERCLA liability protection would be needed. No warranty, expressed or implied, has been made, except that the services have been performed in general accordance with ASTM E 1527-13, Standard Practice for Environmental Site Assessment and updates.

Some of the information provided in this report is based upon personal interviews, research of available publicly accessible documents, records, aerial photographs, and maps held by government and private parties as well as reasonably observable Site conditions. Publicly accessible information cannot be relied upon to definitively confirm or deny the existence of recognized environmental conditions at the Site and therefore MCI is not responsible for the accuracy of the data provided by others nor the personal statements and recollections of those persons contacted. There is also a possibility that even with the proper review of this information that there may exist conditions on the property that could not be identified within the scope of the assessment or which were not reasonably identifiable from the available

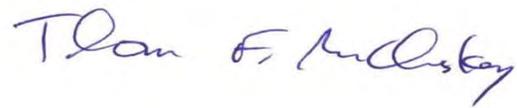

information. Changes in applicable standards can occur as the result of legislation or broadening knowledge that may invalidate, wholly or in part, the findings of this report.

13.0 QUALIFICATIONS AND SIGNATURES

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professionals as defined in Section 312.20 of 40 CFR 312. We have the specific qualifications, based on education, training, and experience, to assess a Site of the nature, history, and setting of the subject Site. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR 312.

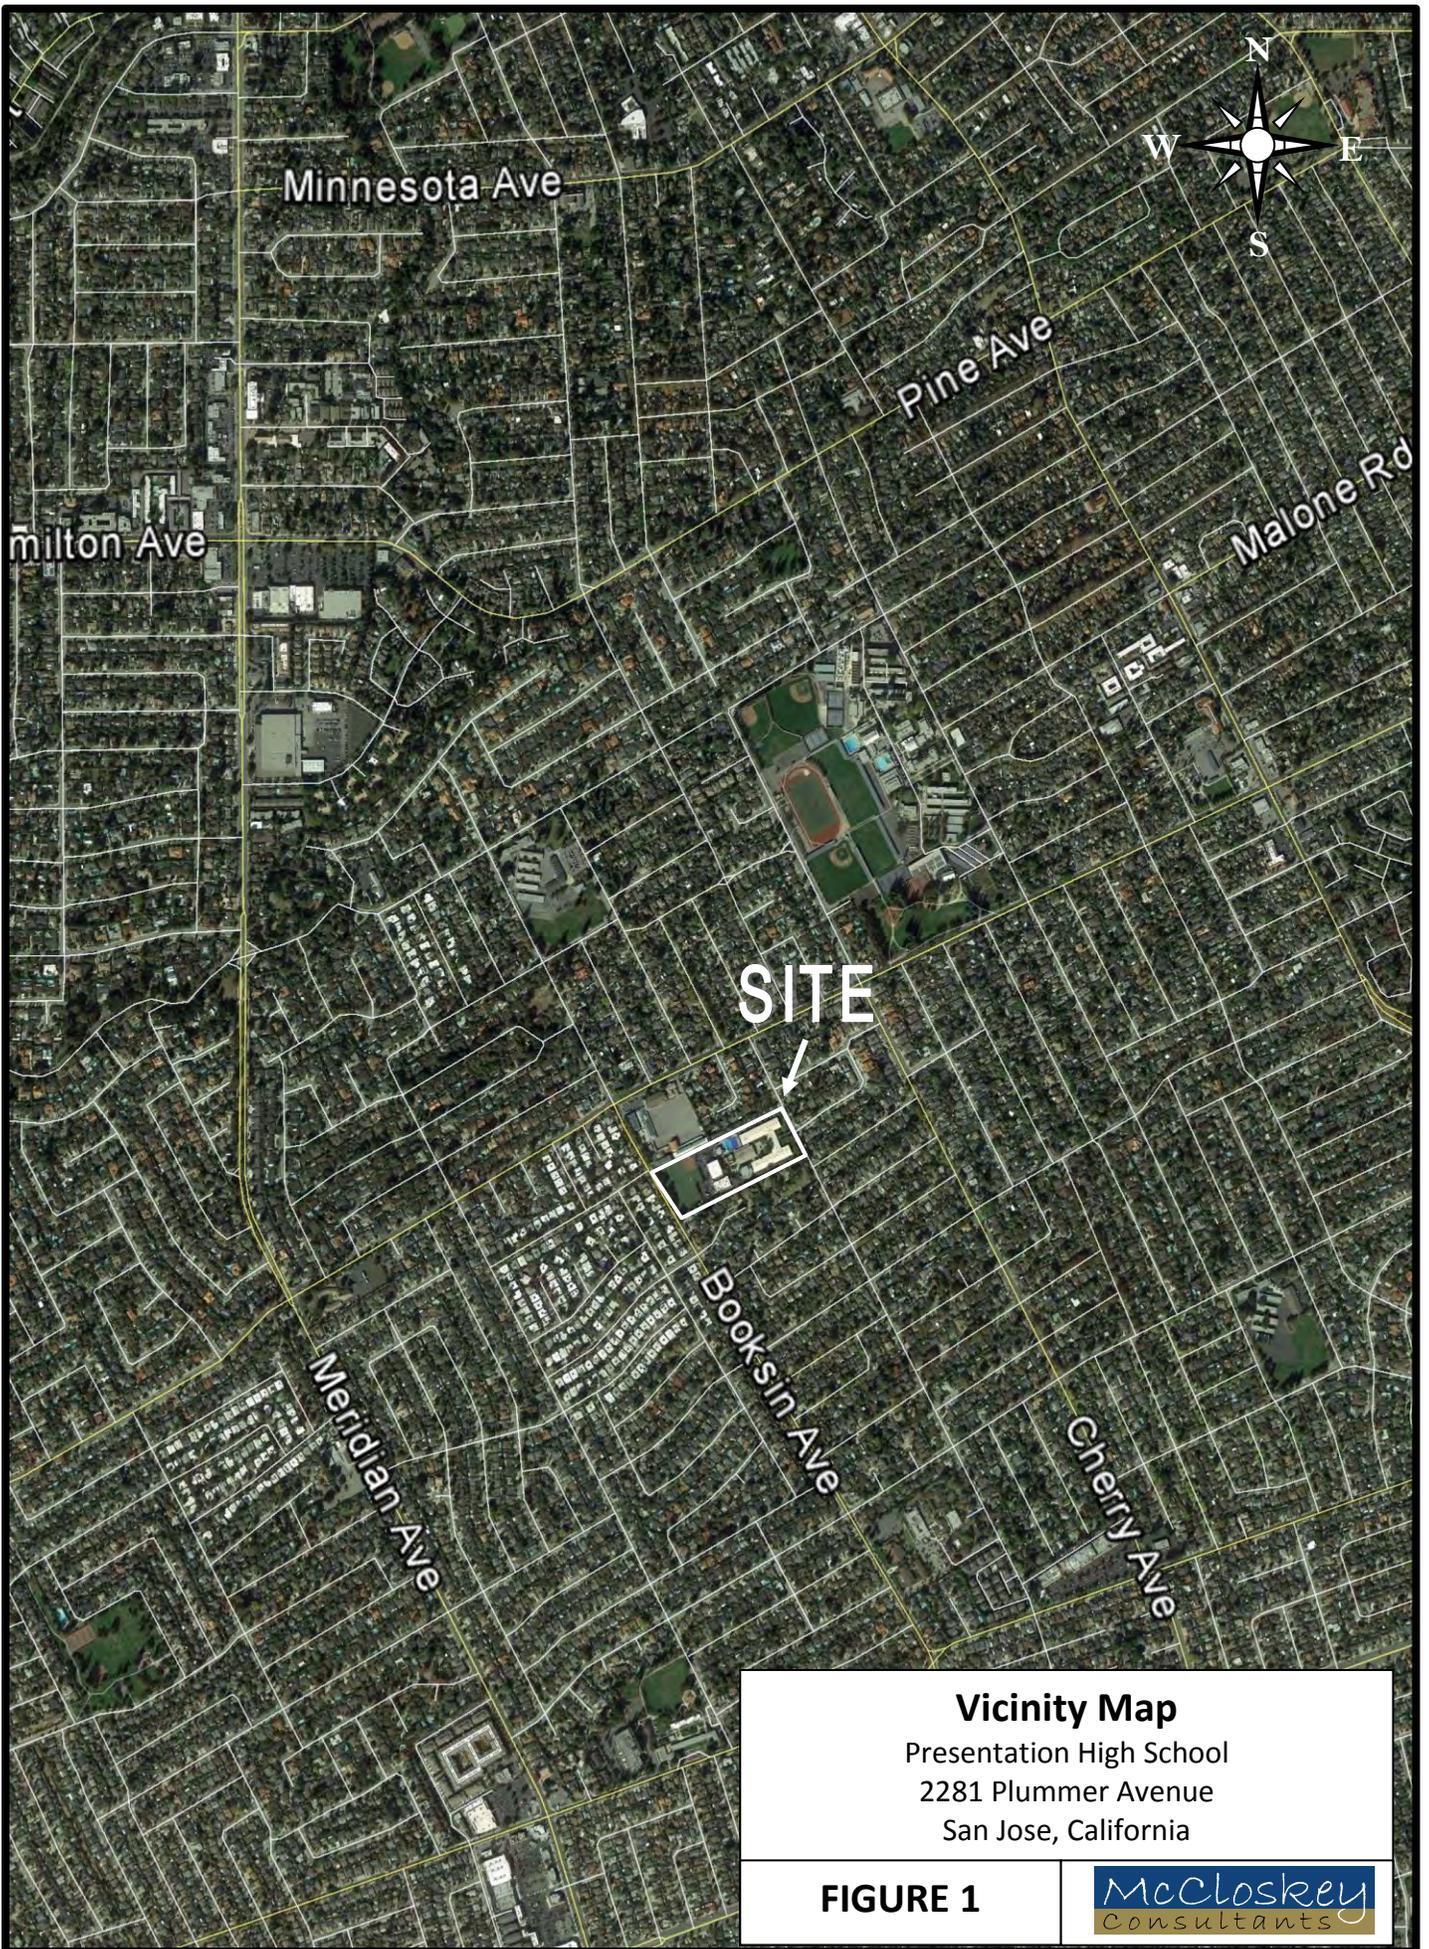

Belinda P. Blackie, P.E.
Senior Project Engineer

Thomas F. McCloskey, P.G., C.E.G., C.HG.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/13/2017 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where

EXECUTIVE SUMMARY

environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/31/2017 has revealed that there is 1 ENVIROSTOR site within approximately 1 mile of the target property.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 05/30/2017	Source: EPA
Date Data Arrived at EDR: 06/09/2017	Telephone: N/A
Date Made Active in Reports: 09/15/2017	Last EDR Contact: 11/03/2017
Number of Days to Update: 98	Next Scheduled EDR Contact: 01/15/2018
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 05/30/2017	Source: EPA

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/05/2017	Telephone: 703-603-8704
Date Made Active in Reports: 04/07/2017	Last EDR Contact: 10/06/2017
Number of Days to Update: 92	Next Scheduled EDR Contact: 01/15/2018
	Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 07/11/2017	Source: EPA

	Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 07/11/2017	Source: EPA

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 09/13/2017	Source: Environmental Protection Agency

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-564-2501
Date Made Active in Reports: 04/10/2007	Last EDR Contact: 12/17/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water board's review found that more than one-third of the region's active disposal pits are operating without permission.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historic Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/28/2017	Source: Department of Energy & Environmental Protection
Date Data Arrived at EDR: 08/18/2017	Telephone: 860-424-3375
Date Made Active in Reports: 11/14/2017	Last EDR Contact: 11/14/2017
Number of Days to Update: 88	Next Scheduled EDR Contact: 02/26/2018
	Data Release Frequency: No Update Planned

NJ MANIFEST: Manifest Information

Hazardous waste manifest information.

Date of Government Version: 12/31/2016	Source: Department of Environmental Protection
Date Data Arrived at EDR: 04/11/2017	Telephone: N/A
Date Made Active in Reports: 07/27/2017	Last EDR Contact: 10/05/2017
Number of Days to Update: 107	Next Scheduled EDR Contact: 01/22/2018

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

UTM Y (Meters):	4126618.2
Elevation:	163 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5640416 SAN JOSE WEST, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

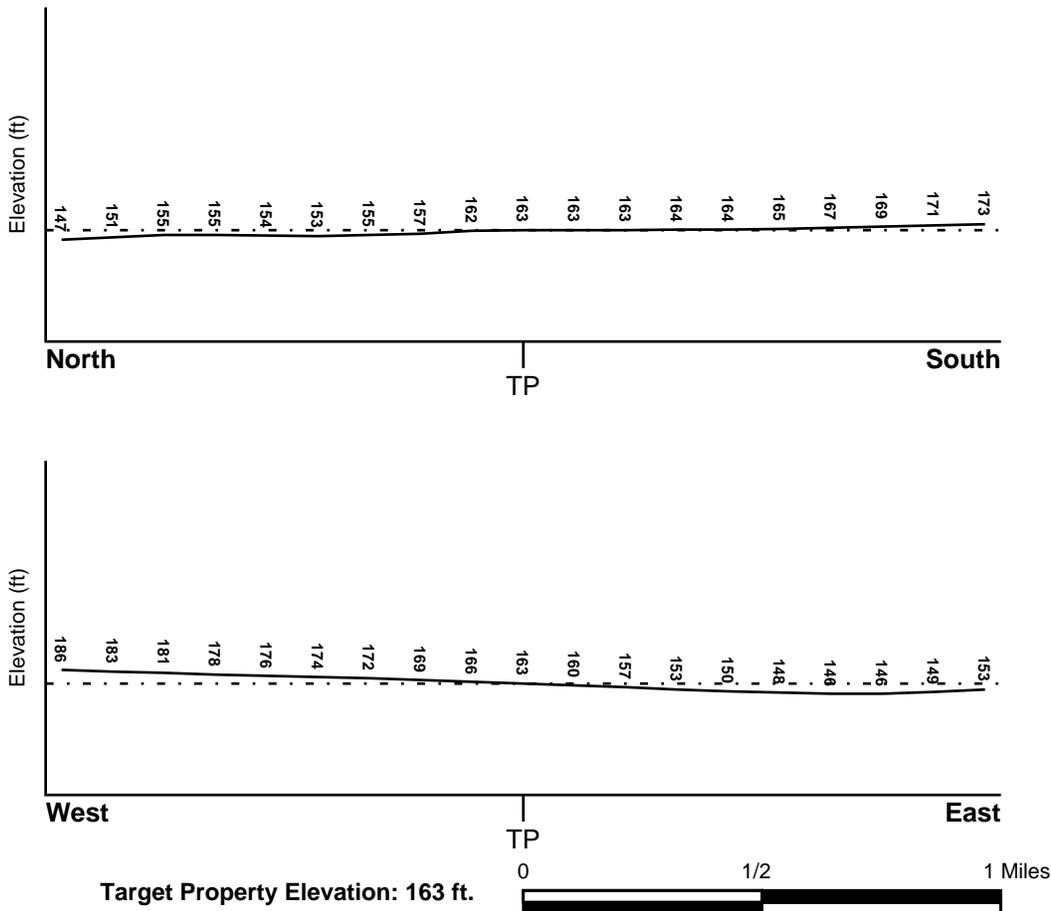

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ENE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
SAN JOSE WEST	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Cenozoic
System: Quaternary
Series: Quaternary
Code: Q (*decoded above as Era, System & Series*)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: BOTELLA

Soil Surface Texture: clay loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: MODERATE

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	9 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils.	Max: 0.60 Min: 0.20	Max: 7.30 Min: 5.60
2	9 inches	41 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils.	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60
3	41 inches	76 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: No Other Soil Types

Surficial Soil Types: No Other Soil Types

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: No Other Soil Types

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by McCloskey Consultants Inc were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.
