

APPENDIX C2

Phase II Limited Surface Soil Sampling

17 May 2018

Ms. Anne P. Conner
Sr. Remediation Project Manager
Pacific Gas and Electric Company
3401 Crow Canyon Road
San Ramon, CA 94583

Subject: **Limited Surface Soil Sampling**
 Santa Clara-Portswood Property
 Santa Clara County APN: 701-58-048 and 701-48-057
 San Jose, Santa Clara County, California

Dear Ms. Conner:

ERM-West, Inc. (ERM) has prepared this letter report on behalf of Pacific Gas and Electric Company ("PG&E") to summarize the findings of limited surface soil sampling at the Santa Clara-Portswood Property identified by San Joaquin County Assessor's Parcel Numbers (APN) 701-58-048 and 701-48-057. The parcels are located at an unaddressed property on Portswood Drive and Hampswood Way in San Jose, Santa Clara County, California (the "site" or "subject property"). This work was performed under ERM's Master Service Agreement (MSA) with PG&E #C1135 under the Alliance Framework.

The shallow composite sampling and analysis of the composite sample for potential compounds of concern including total petroleum hydrocarbons as diesel, motor oil and gasoline, organochlorine pesticides, polychlorinated biphenyls (PCBs), and metals, was completed to characterize onsite soils. The limited field investigation did not include sampling of soils at depths greater than 1 foot below ground surface (bgs); however, the findings of the Phase I ESA and limited soil investigation do not indicate reason to suspect that deeper soils have been significantly impacted by historical site operations. The scope of work and results are described in the sections below.

SCOPE OF WORK

ERM understands that Pacific Gas and Electric Company ("PG&E") is considering divesting the Site in Santa Clara County (APN: 701-58-048 and 701-48-057). The site is located on approximately 4.3 acres of land in four disconnected segments, composing two parcels. Each parcel is divided into

two pieces by roadways, and the two parcels are disconnected from each other by the Almaden Expressway. ERM understands that PG&E is conducting the limited surface soil sampling to support divesting the Site.

This limited soil investigation was conducted to determine if historical land use has impacted surface soil at the subject property. Findings from the April 2018 Phase I ESA identified that the subject property has been historically used for agricultural purposes and northern and central portion of the Site were topped with artificial fill material. The Subject Property was used was also developed with railroad tracks that spanned the Site. By 1940, the railroad tracks were no longer present and the Site was being used for agricultural purposes, including both orchards and row crops. The Site was subsequently occupied by various small structures, with the southern portion currently an asphalt paved lot after the removal of the row crops and orchards. Given the nature of current land use and the lack of regulatory scrutiny to date, potential chemicals of concern on site from historical and current operations may include residual agricultural chemicals in soil and potential impacts from the portions of the site topped with artificial fill. Sampling locations were selected to provide representative composite samples of the site.

SOIL SAMPLING

Representative soil sampling locations were selected during site reconnaissance. Soil samples were collected using a hand trowel. ERM referred to California Department of Toxic Substances Control (DTSC) Interim Guidance for Sampling Agricultural Properties, August 2008 when selecting sampling procedures.

ERM collected three four-point composite surface soil sample on each of the three northern unpaved sublots for a total of three composite samples. The locations of the soil borings were positioned to capture a representative view of the current conditions across the Site. Soil sampling locations are shown in Figure 2.

Each soil sample was collected advanced by removing the upper 0.25 feet of soil with a hand trowel. One soil sample was then collected from each location at a depth of 0.25 feet bgs. Each soil sample was collected with the hand trowel and placed in a lab-supplied 8 ounce glass jar. Each soil sample was labeled and packed in an ice-filled cooler.

The samples were hand delivered under standard chain-of-custody documentation to Curtis & Tompkins, a California-certified laboratory in Berkeley, California. The laboratory was instructed to analyze the composite soil samples for the following parameters:

- Total Petroleum Hydrocarbons as Diesel (TPH-d) and Total Petroleum Hydrocarbons as Motor Oil (TPH-mo) by USEPA Method 8015B;
- Total Petroleum Hydrocarbons as Gasoline (TPH-g) by USEPA Method 8260B;
- Polychlorinated biphenyls (PCBs) by USEPA Method 8082;
- Metals (California Title 22) by USEPA Method 6010/7000 series; and
- Organochlorine Pesticides by USEPA Method 8081A.

As the soil samples were collected at the near surface level, no waste soil was generated.

ANALYTICAL RESULTS

Soil analytical results are summarized on Tables 1 through 5 for each chemical class. Detectable concentrations are compared to compound-specific, risk-based Environmental Screening Levels (ESLs) established for residential shallow soil exposure and commercial/industrial shallow soil exposure by the San Francisco Bay Regional Water Quality Control Board in the February 2016 ESL Workbook.

The laboratory report is provided in Appendix A. The results for each chemical class are summarized below in the following subsections.

Total Petroleum Hydrocarbons as Diesel, Motor Oil and Gasoline in Site Soils

As shown on Table 1, TPH-d and TPH-mo were detected above the laboratory reporting limits at concentrations ranging from 12 mg/kg (COMP-3) to 100 mg/kg (COMP-2) and 50 mg/kg (COMP-3) to 290 mg/kg (COMP-2), respectively. TPH-g was not detected above the laboratory reporting limit in any sample. The TPH-d and TPH-mo concentrations detected are below the residential and commercial/industrial ESLs and are generally not considered a threat to human health or the environment under the relevant land use.

Metals in Site Soils

As shown on Table 2, 12 of the 17 metals analyzed were detected above the laboratory reporting limit in the composite soil samples. With the exception of cobalt, the concentrations of metals detected appear to be representative of background concentrations and are below the residential and commercial/industrial ESLs. Cobalt was detected at concentrations ranging from 27 mg/kg (COMP-1 and COMP-3) to 28 mg/kg (COMP-2). These detections are slightly above the residential ESL of 23 mg/kg but well below commercial/industrial ESL of 350 mg/kg.

Arsenic was detected at concentrations ranging from 3.9 mg/kg (COMP-3) to 5 mg/kg (COMP-1). Arsenic detections exceed the residential and commercial/industrial ESLs; however, as shown in Table 3, it is within the accepted background range of arsenic for California soils as defined by numerous background studies. Therefore, the arsenic concentrations detected in soil appear to be naturally occurring concentrations.

Organochlorine Pesticide Detections in Site Soils

As shown on Table 4, a low concentration of the organochlorine pesticides alpha-chlordane, 4,4'-DDD, 4,4'-DDT and gamma-chlordane was detected in the site soil sample at a concentration of 0.0035 mg/kg (COMP-2) to 0.0049 mg/kg (COMP-1), 0.0080 mg/kg (COMP-1) to 0.012 (COMP-2), 0.0082 mg/kg (COMP-2) and 0.0020 mg/kg (COMP-2) to 0.0036 mg/kg (COMP-1), respectively. These detections are well below the residential and commercial/industrial ESLs. Detections below the residential and commercial/industrial ESLs are not considered threats to human health or the environment under the relevant land use.

No other organochlorine pesticides were detected above the laboratory reporting limits. Reporting limits for the other pesticides that were not detected were well below the associated screening levels.

Polychlorinated Biphenols in Site Soils

As shown on Table 5, no PCBs were detected in site soils. The laboratory reporting limit for PCBs was well below the associated residential and commercial/industrial ESL. Detections below the residential and commercial/industrial ESLs are not considered threats to human health or the environment under the relevant land use.

SUMMARY AND CONCLUSIONS

Sampling locations were selected to demonstrate current soil conditions throughout the site. The results of the investigation were as follows:

- No visual or other evidence of impacts was observed during the field investigation.
- Screening levels residential shallow soil exposure and residential shallow soil exposure are considered to be the most appropriate basis for evaluating the results based on the nearby land use surrounding the site.
- TPH-d, TPH-mo and TPH-g concentrations were either nondetect or well below the residential ESLs and are not considered threats to human health or the environment under the relevant land use.
- All metals concentrations detected appear to be indicative of background concentrations, with the exception of cobalt that is slightly elevated above the residential ESL, but is well below the commercial/industrial ESL, and is therefore not considered a threat to human health or the environmental under the relevant land use.
- Pesticide concentration of alpha-chlordane, 4,4'-DDD, 4,4'-DDT and gamma-chlordane were detected at low concentrations below the residential ESLs. Detections below the residential ESLs are not considered threats to human health or the environment under the relevant land use.

Shallow composite soil samples were collected and analyzed for potential compounds of concern including petroleum hydrocarbons as diesel, motor oil and gasoline, organochlorine pesticides, PCBs and metals, was completed to screen shallow soil conditions at presumed representative locations across the Site. The results of the Phase I, the site visit and this limited surface soil investigation do not indicate obvious releases of the potential compounds of concern within the subject property. The limited field investigation did not include sampling of soils at depths greater than 1 foot bgs or comprehensive sampling across the Site; however, the findings of the Phase I ESA and limited soil investigation do not indicate reason to suspect that surface soils or deeper soils have been significantly impacted by historical site operations. This conclusion is based on 1) the nature of historical site operations; 2) the lack of visual evidence of impacts during the Phase I ESA and limited soil investigation site visits and from a review of historical resources of the subject property; and 3) the lack of elevated detections of suspected compounds of concern in the surface soils.

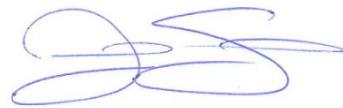

CLOSING

On behalf of the ERM project team, we appreciate the opportunity to support PG&E in meeting its goals for this project. If you have any questions, please call either of us at (925) 946-0455.

Sincerely,

Kevin Almestad

F2	MS/MSD RPD exceeds control limits

Glossary

Abbreviation

These commonly used abbreviations may or may not be present in this report.

□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
