

TO: HONORABLE MAYOR AND
CITY COUNCIL

FROM: John Ristow

**SUBJECT: PAVEMENT MAINTENANCE
THREE-YEAR PLAN (2023-2025)**

DATE: January 27, 2023

Approved

Date

1/31/23

INFORMATION

This memorandum provides the City Council and public with information on planned locations and proposed pavement treatment work on City streets in 2023. It also contains preliminary information on the overall strategy and plan for the subsequent two construction seasons (2024-2025). The three-year plan is updated annually, with the overall goal of maintaining each of the 1,552 miles of local and neighborhood streets over the next five years, while ensuring appropriate levels of maintenance on the 967 miles of major streets.

In the 2022 construction season, the Department of Transportation (DOT) maintained 283 miles of streets, 230 of which were planned for 2022 and a further 53 that were delayed from 2021. Approximately 19 miles are in winter suspension due to unfavorable weather conditions. All paving, striping and remaining construction activities on suspended roadway segments (see Attachment A) will continue in the spring and into early summer of 2023.

This memo also briefly describes improvements to the condition of the street network, which will be detailed more fully in a report to the Transportation and Environment Committee in March 2023.

BACKGROUND

The Pavement Maintenance Program is fully funded for the 2023 construction season with approximately \$102.3 million in funding (excluding re-budgets and carry over encumbrances from FY 2021-2022). Funding for the 2023 program includes, among other sources, \$37.5 million from Measure T, and \$45.4 million in combined funding from the 2016 Santa Clara Valley Transportation Authority Measure B and Senate Bill 1. When accounting for ongoing, temporary and one-time funding, DOT predicts an average of \$94.5 million in annual funding over the next five years, including 2023. DOT estimates that \$72.3 million is needed each year for a 10-year period to maintain an overall pavement condition rating of “good”, which is a Pavement Condition Index rating of 70 or higher.

DOT has prepared an annual update to the three-year Pavement Maintenance Plan (2023-2025) to preserve and rehabilitate 742 miles of City streets, which include 222 miles of major streets and 520 miles of local and neighborhood streets. The 2023 Pavement Maintenance Plan includes 236 miles, of which 75 are major streets and 161 are local and neighborhood streets. DOT has coordinated this plan with other City departments, external stakeholders that work on City streets, as well as City Council offices.

San José's Pavement Condition Index score has risen to 71 from 68 in the previous report. With the improvement of citywide conditions to the "good" category for the first time in recent history, the City has achieved one of the original goals of pavement funding measures approved by voters and done so earlier than predicted. DOT will provide a complete analysis of the City's current and projected pavement conditions and funding levels and needs to the Transportation and Environment Committee meeting in March 2023.

ANALYSIS

1. 2023 Maintenance Plan

The City's pavement network is separated into two categories: Major Streets and Local and Neighborhood Streets. The 2023 Pavement Maintenance Plan includes projects on both networks.

Major Streets Projects

The Major Streets Network consists of 967 miles of the City's most heavily traveled streets, which collectively carry approximately 85% of traffic in the City. Nine separate pavement maintenance projects are being prepared to implement the 2023 major street maintenance program, which will preventively maintain or resurface approximately 75 miles of streets and include all necessary curb ramp installations and upgrades to comply with the Americans with Disabilities Act (ADA) requirements.

To select the major streets identified for treatment in 2023, DOT utilized information provided by the City's Pavement Management System to generate a candidate list of streets for preventive maintenance (sealing) and rehabilitation (resurfacing). The candidate list of streets and the mix of treatments (sealing versus resurfacing) is a function of the complex analysis that the Pavement Management System performs to improve and maintain the pavement network in the most cost-effective manner with available funding. The candidate list was then thoroughly analyzed by staff using the following criteria to create the final list of streets:

- Funding availability and funding use restrictions
- Streets on the Major Streets Network
- Streets not affected by current or future street or utility related projects

- Maintenance history and prescribed treatment schedules
- Streets associated with planned safety, bikeway or other “complete streets” projects
- Community and City Council office feedback regarding roadway conditions and priority street segments
- Relative location of street segments to create multiple, continuous segments, consistency within neighborhoods, and project efficiency
- Multi-year geographic input across the City and street network

DOT cross-referenced the selected streets relative to census tracts designated by the Municipal Transportation Commission as “Equity Priority Communities.” Based on this analysis, DOT will be maintaining 78 Equity Priority Communities miles on the major streets through this three-year plan.

The following is a summary of the nine Major Streets projects for 2023:

Curb Ramp & Concrete Minor Projects (5) and Remove and Replace Asphalt Project (1)

The purpose of these six projects is to prepare streets for resurfacing and preventive maintenance sealing in 2023. DOT will concurrently implement five curb ramp and concrete projects that will install missing curb ramps, or retrofit existing ones, along streets planned for pavement maintenance to ADA standards. A “remove and replace” asphalt project will repair failed areas of pavement and generally prepare the streets for the subsequent preventive maintenance sealing treatment (see Street Sealing Project below). All the concrete projects were advertised through the minor contract procurement process and planned for construction starting in January. The “remove and replace” asphalt project was advertised in January and is planned for construction starting in March.

Street Sealing Project (1)

This project will perform a street sealing treatment on approximately 44 miles of major streets. The street sealing process results in the application of a thin layer (3/8”) of fine aggregate and asphalt emulsion to the surface of a street in fair to good condition to extend the useful life of the street and reduce future maintenance costs. The project will also install all final roadway markings and striping. The project is planned for advertisement in February, Council award in March, and construction starting in June.

Street Resurfacing Projects (2)

DOT will perform two resurfacing projects in 2023 on approximately 31 miles of major streets. Resurfacing is a treatment in which a street in poor condition is restored to good condition by removing/replacing or reconditioning damaged pavement and applying a new 2” to 4” layer of asphalt concrete. DOT will continue to utilize the process of Cold-in-Place Recycling as a cost effective and environmentally friendly method for pavement rehabilitation wherever appropriate.

The use of rubberized hot mix asphalt as the final wearing surface will also continue. The first project will resurface 15 miles of city streets. The project is planned for advertisement in February, Council award in March, and construction starting in May. The second project consists of 16 miles and is planned for advertisement in March, Council award in April, and construction starting in July.

Attachment B provides the list of roadway segments planned for the 2023 Major Streets Pavement Maintenance Program.

Local and Neighborhood Streets

The Local and Neighborhood Streets Network is organized into 135 geographically contiguous “Pavement Maintenance Zones” (PMZs) to support efficient planning and delivery of projects, maximize the amount of work completed at one time within a neighborhood area, and ensure geographic spread of pavement maintenance across the City. With 1,552 miles of local and neighborhood streets, DOT is using the PMZ model to develop and deliver a maintenance plan for the Local and Neighborhood Streets Network.

To select PMZs that will be maintained in 2023, DOT analyzed the conditions of each PMZ and identified those with overall poorest conditions from each Council District to generate a candidate list of PMZs for the three-year plan program. The candidate list was then prioritized using the following criteria to create the final list of PMZs for the 2023 Local Streets projects:

- Total miles of streets in reconstruction and rehabilitation category
- Maintenance history and prescribed treatment schedules
- Community and City Council office feedback regarding roadway conditions and priority street segments
- Relative location of street segments to create multiple, continuous segments, consistency within neighborhoods, and project efficiency
- Multi-year geographic input across the City and street network
- Number of public traffic attraction facilities such as schools, hospitals, libraries, community centers, etc.
- Equity as described by the Metropolitan Transportation Commission (MTC)

DOT will maintain 94 miles within Equity Priority Communities in this three-year plan. By the end of 2025, DOT will have completed maintenance on 313 miles, or 88% of streets in Equity Priority Communities areas since 2019.

Seventeen separate projects are being prepared to implement the 2023 local streets maintenance program, which will preventively maintain or resurface approximately 161 miles of streets and

include all necessary curb ramp installations and upgrades to comply with ADA requirements. The following is a summary of the 17 local streets projects for 2023:

2023 Local Streets ADA Ramps Projects (11)

The purpose of these projects is to install missing or upgrade curb ramps to ADA standards along local streets planned for pavement maintenance in 2023. These 11 projects will be procured using the minor project procurement process to expedite the preparation works for the paving projects. Of these 11 projects, five have been delivered since November 2022, while the other six will be delivered by June 2023.

2023 Remove and Replace Project (1)

The purpose of this project is to provide localized asphalt concrete repairs in preparation for the 2023 Local Streets Sealing project. This contract is planned for advertisement in February, Council award in late April, and construction starting in June.

2023 Local Streets Sealing Project (1)

This project will seal approximately 51 miles of the Local and Neighborhood Streets Network in 2023. This contract is planned for advertisement in March, Council award in early June, and construction starting in late July.

2024 Local Streets Resurfacing Projects (4)

These four projects will resurface approximately 110 miles of local and neighborhood streets. A variety of resurfacing treatments such as mill and fill, Cold-In-Place Recycling with overlays, and thin straight overlays with base repairs will be utilized to restore pavement surface to good condition and maximize the remaining service life.

The second year of the 2022-2024 LS Resurfacing project will resurface 25 miles in the 2023 construction season. DOT will bring an additional multi-year contract to the Council in April 2023 that will allow the City to secure favorable prices in subsequent option years and benefit from a faster delivery of maintenance by saving time from the typical procurement process.

Attachment C provides the list of all 161 miles of the 2023 Local and Neighborhood Streets Pavement Maintenance Program within all Council Districts.

2. Three-Year Plan (2023-2025)

The list of 742 miles of streets planned for maintenance over the next three years is too extensive to include as an attachment to this memorandum and specific projects have yet to be fully scoped for the 2024 and 2025 pavement seasons. Attachment D provides a map of previously completed maintenance as well as work that is preliminarily expected to be performed between 2023-2025,

with a greater degree of confidence associated with the locations identified for the 2023 season. This map also highlights the streets maintained between 2019-2022. Residents and interested parties can view completed miles and track 2023 construction season progress on the DOT website at: <https://www.sanjoseca.gov/paving>

DOT will update this three-year plan annually each winter to help the public understand and prepare for maintenance occurring throughout the City.

3. Safety, Complete Streets, and Bikeway Improvements

DOT will continue to take advantage of the annual pavement maintenance program to install various “complete street” elements that result in safer streets with improved mobility options. Newly paved streets provide a cost-effective opportunity to reconfigure vehicle lanes, enhance existing or install new bike lanes, and upgrade vehicle and bike detection systems, where appropriate. Coordination among DOT’s programs and projects, as well as coordination with other departments, is a key component in developing and delivering the annual pavement maintenance program.

Regarding bike lanes, DOT looks to retain, enhance, or add bike lanes in a way that maximizes safety and the orderly flow of traffic for all roadway users while minimizing the impact to vehicle capacity and on-street parking. For 2023, streets with existing bike lanes will be evaluated for the installation of enhanced bike lanes. Work is also underway to identify and prepare designs for new bike lane installations where they do not exist. Some of these locations may impact lane configurations and on-street parking. In these cases, DOT will ensure that proper analysis and outreach to the council offices and the community occurs prior to approving and implementing any final complete street designs.

Of interest is that the 2023 pavement program will incorporate bike and traffic safety improvements along selected corridors to further connect the San José bike network, along with supporting Vision Zero safety initiatives. Notable streets planned for the year include Berryessa Rd, Tully Rd, San Carlos St, and Saratoga Ave.
