# PCBs Screening Assessment Form May 2023 Update (for MRP 3.0)

This screening process is part of a program for water quality protection and was designed in accordance with requirements in the Bay Area regional municipal stormwater NPDES permit (referred to as the Municipal Regional Permit) and San José City Council Policy 6-28. This process **does not** address other environmental programs or regulations (e.g., PCBs regulations under the Toxic Substances Control Act (TSCA); federal, state, or local regulations for hazardous material handling and hazardous waste disposal; health and safety practices to mitigate human exposure to PCBs or other hazardous materials; recycling mandates; or abatement at sites with PCBs or other contaminants). **The Applicant is responsible for knowing and complying with all relevant laws and regulations. See the Federal and State PCBs Regulations section for additional information.** 

Complete all applicable parts of the PCBs Screening Assessment Form and submit with your demolition permit application. See "PCBs in Priority Building Materials: Model Screening Assessment Applicant Package, Applicant Instructions for Completing the PCBs Screening Assessment Form."

All Applicants must complete Part 1 and Part 2.				
Part 1. Owner/Consultant and project information

APN (s)	T			
Year Building was Built	Type of	Construction		
Estimated Demolition Date				

<sup>1</sup> If the project includes the demolition of multiple buildings complete one form for each building to be demolished.

Part 2. Is building subject to the PCBs screening requirement based on type, use, and age of the building?						
2.a Is the building to be demolished wood framed and/or sing	le family residential?					
<ul> <li>If the answer to question 2.a is Yes, the PCBs Screening Assessment is complete, skip to Part 4.</li> <li>If the answer is No, continue to Question 2.b.</li> </ul>						
2.b Was the building to be demolished constructed or remode 1950 and December 31, 1980?	eled between January 1,					
<ul> <li>If the answer to Question 2.b is <b>No</b> the PCBs Screening A</li> <li>If the answer is <b>Yes</b>, continue to Question 2.c.</li> </ul>	Assessment is complete, skip to Part 4.					
2.c Is the proposed demolition a complete demolition of the e	entire building?					
➤ If the answer to Question 2.c is <b>No</b> the PCBs Screening A	Assessment is complete, skip to Part 4.					
➢ If the answer is <b>Yes</b> , complete Part 3.						
No and 2.b is Yes) and the proposed demolition is a complete demolition of the entire building, (i.e., the answer to question 2.c is Yes) and therefore the Applicant must complete Part 3 and the Part 3 tables (see below for tables).  Part 3. Report concentrations of PCBs in priority building materials <sup>2</sup>						
Note: if a material has been determined to contain asbestos, lead or other hazardous substances and will be abated under an associated waste program, that material need not be sampled for PCBs under this program.  Option 1. Conduct Representative Sampling. Applicants conducted representative sampling and analysis of the priority building materials per the Protocol for Evaluating Priority PCBs-Containing Materials before Building Demolition (2018, revised November 2019) (Attachment C of the PCBs in Priority Building Materials: Model Screening Assessment Applicant Package).						
<b>Option 2. Use Existing Sampling Records.</b> Applicants possess existing sample results that are consistent with the Protocol for Evaluating Priority PCBs-Containing Materials before Building Demolition (2018, revised November 2019) (Attachment C of the PCBs in Priority Building Materials: Model Screening Assessment Applicant Package).						
3.a Select option and report PCBs concentrations in the priority building materials and the source of data for each of the priority building materials. Provide the required supporting information.						
☐ Option 1: Conduct Representative Sampling	☐ Option 2: Use Existing Sampling Records					
☐ Summarize results on Part 3 Tables and provide the following supporting information (all three types of documentation listed below are required):	☐ Summarize results on Part 3 Tables; and provide the following supporting information (both types of documentation listed below are required):					
☐ Contractor's report documenting the assessment results	☐ Contractor's report/statement documenting that					
☐ QA/QC checklist (see Attachment C, section 3.2.4); and	the results are consistent with the <i>Protocol for</i> Evaluating Priority PCBs-Containing Materials					
☐ Copies of the analytical data reports.	before Building Demolition.					
	$\square$ Copies of the analytical data reports.					

<sup>1</sup>An Applicable Structure is defined as a building constructed or remodeled between January 1, 1950 and December 31, 1980. Wood framed buildings and single-family residential buildings are not an Applicable Structure regardless of the age of the building. See *PCBs in Priority Building Materials: Model Screening Assessment Applicant Package, Applicant Instructions for Completing the PCBs Screening Assessment Form.* 

<sup>&</sup>lt;sup>2</sup>The Priority Building Materials are: 1. Caulk; 2. Thermal insulation; 3. Fiberglass insulation; 4. Adhesive mastics; and 5. Rubber window gaskets.

#### All Applicants must complete Part 4.

#### Part 4. Certification

I certify that the information provided in this form is, to the best of my knowledge and belief, true, accurate, and complete. I further certify that I understand my responsibility for knowing and complying with all relevant laws and regulations related to reporting, abating, and handling and disposing of PCBs materials and wastes. I understand there are significant penalties for submitting false information. I will retain a copy of this form and the supporting documentation for at least 5 years.

I further certify that if the demolition site has an Applicable Structure<sup>1</sup> containing building materials with PCBs concentrations of 50 ppm or greater<sup>2</sup> at the time such structure undergoes demolition:

- (1) I will notify the City of San José, the San Francisco Bay Regional Water Quality Control Board, and U.S. Environmental Protection Agency (U.S. EPA), via email, at least seven working days in advance of the start of the demolition and shall ensure that this notice contains the date that the actual demolition is to occur:
  - a. City of San José: WSPinbox@sanjoseca.gov
  - b. San Francisco Bay Regional Water Quality Control Board: <a href="mailto:lmtiaz-Ali.kalyan@waterboards.ca.gov">lmtiaz-Ali.kalyan@waterboards.ca.gov</a>, Cheryl.Prowell@waterboards.ca.gov
  - c. U.S. Environmental Protection Agency (U.S. EPA): <a href="mailto:santos.carmen@epa.gov">santos.carmen@epa.gov</a>
- (2) Additional notifications and site requirements:
  - a. Within five working days of it being determined, I will notify the City of San José whether advance approval from the U.S. EPA is required for this site.<sup>3</sup>
  - b. Project sites must be inspected to ensure that effective construction pollutant controls are used to prevent discharge into the storm sewer system. The City may impose additional site controls as determined during the inspection or approval process including sweeping the project site and the streets around the property with street sweepers that will effectively remove sediment and dust.
  - c. Applicants shall conform with the best management practices (BMPs) for dust and sediment control as specified in The Association of Bay Area Government's Manual of Standards Erosion & Sediment Control Measures and California Storm Water Best Management Practice Handbook.
  - d. Within five working days after the demolition is complete, I will notify the City of San José of the actual demolition date(s).
  - e. If it is determined<sup>4</sup> that advance approval from the U.S. EPA is <u>not</u> required for this site, I will submit to the City of San José the initial Generator's Certification in the Uniform Hazardous Waste Manifest provided to the transporter of the hazardous waste within ten working days of the transport of materials. Within ten working days of the hazardous waste documentation becoming available, I will provide the City with official documentation that the building materials were disposed appropriately according to state and federal regulations. If advance approval from the U.S. EPA is required for this site, submittal of the hazardous waste manifest is not required.

#### May 2023 Update (for MRP 3.0)

<sup>1</sup>Applicable Structure is defined as building constructed or remodeled between January 1, 1950 and December 31, 1980. Wood framed buildings and single-family residential buildings are not an Applicable Structure regardless of the age of the building. See *PCBs in Priority Building Materials: Model Screening Assessment Applicant Package, Applicant Instructions for Completing the PCBs Screening Assessment Form* 

<sup>2</sup>If PCBs are detected at concentrations ≥50 ppm, MRP Provisions C.12.g.ii (3) and (4) require municipalities to enhance their construction site stormwater program. These requirements may require the implementation of enhanced erosion control, sediment control, and good housekeeping BMPs to minimize migration of PCBs into the storm drainage system during demolition. Check with the municipality issuing the demolition permit for BMP requirements. Additionally, the site may be inspected more frequently to ensure the proper implementation of the BMPs. As noted in Part 4, keep the municipality informed of the demolition schedule.

<sup>3</sup>Provision C.12.g.iii (4) states: "Beginning with their 2024 Annual Report, Permittees shall provide the following: whether the site was inspected during demolition, and for those cases where notification and advance approval from the U.S. EPA is not required and were approved for demolition after June 30, 2023, the hazardous waste manifest prepared for transportation of the material to a disposal facility." It appears that the intent is that it is necessary to provide the manifest when EPA is not involved with the site remediation. Under some circumstances (that should be described in available EPA guidance) these types of PCBs remediations can be self-implemented and do not necessarily require any involvement by EPA staff. If self-implemented and EPA is not involved, then the municipality should require the Applicant to submit the manifest to the municipality so that the municipality can provide it in its Annual Report.

<sup>4</sup>The Applicant makes this determination.

Applicants that determine PCBs exist in building materials must follow applicable federal and state laws. This may include reporting to U.S. Environmental Protection Agency (U.S. EPA), the San Francisco Bay Regional Water Quality Control Board, and the California Department of Toxic Substances Control (DTSC). These agencies may require additional sampling and abatement of PCBs. Depending on the approach for sampling and removing building materials containing PCBs, you may need to seek advance approval from U.S. EPA before building demolition. Even in circumstances where advance approval from U.S. EPA is not required before the demolition activity, the disposal of PCBs waste is regulated under TSCA and the California Code of Regulations. See below Notes Regarding Federal and State PCBs Regulations.

### Notes Regarding Federal and State PCBs Regulations

- 1.See 40 Code of Federal Regulations (CFR) 761.3 for important information relative to disposal of PCBs-containing building materials, including definitions of PCBs bulk product wastes and PCBs remediation wastes. Also see the memorandum dated October 24, 2012 "PCB Bulk Product Waste Reinterpretation" from Suzanne Rudzinski, Director, Office of Resource Conservation and Recovery, EPA.
- 2. Disposal of PCBs wastes are subject to the Toxic Substances Control Act (TSCA) requirements such as manifesting of the waste for transportation and disposal. See 40 CFR 761 and 40 CFR 761, Subpart K.
- 3. TSCA-regulated does not equate solely to materials containing PCBs at or above 50 ppm. There are circumstances in which materials containing PCBs below 50 ppm are subject to regulation under TSCA. See 40 CFR 761.61(a)(5)(i)(B)(2)(ii).
- 4. Disposal of PCBs wastes are subject to California Code of Regulations (CCR) Title 22, Section Division 4.5, Chapter 12, Standards Applicable to Hazardous Waste Generators.
- 5. California hazardous waste regulatory levels for PCBs are 5 ppm based on the Soluble Threshold Limit Concentration test and 50 ppm based on the Total Threshold Limit Concentration test, see CCR, Title 22, Section 66261.24, Table III.

#### **Agency Contacts**

Applicants should contact the appropriate agencies and review the relevant guidance and information about PCBs in building materials. <u>Municipal staff are not able to advise you on the requirements of the applicable federal and state laws.</u>

## **Part 3 Caulk Applications Table** Column 1. Report all PCBs concentrations for each homogenous area of caulking area (see Attachment C, **Column 2.** Complete for each Section 3.2.2). Use sample designators/descriptions from laboratory report. concentration $\geq$ 50 ppm **Caulk Application Sample Description** Concentration (mg/kg) **Estimate Amount of** Units Material Example: Caulk Sample 1 320 Linear Feet Linear Feet

Part 3 Fiberglass Insulation Applications Table				
<b>Column 1.</b> Report all PCBs concentrations for each homogenous area of fiberglass insulation (see Attachment C, Section 3.2.2). Use sample designators/descriptions from laboratory report.		Column 2. Complete for each concentration ≥ 50 mg/kg		
Fiberglass Insulation Application Sample Description	Concentration (mg/kg)	Estimate Amount of Material	<u>Units</u>	
Example:				
Fiberglass Insulation Sample 1	78	<u>86</u>	Square Feet	
1			Square Feet	
2			Square Feet	
3			Square Feet	
4			Square Feet	
5			Square Feet	
6			Square Feet	
7			Square Feet	
8			Square Feet	
9			Square Feet	
10			Square Feet	

To estimate the square footage of insulation wrapped around pipes use the formula to calculate the lateral area of a cylinder  $2\pi rh$ . Where r is the pipe radius and h is the pipe length. Duplicate page if additional space is needed.

Column 1. Report all PCBs concentrations for each homogenous area of ther	mal insulation (see Attachment C	Column 2. Complete for	each
Section 3.2.2). Use sample designators/descriptions from laboratory report.	mai msalation (see Attachment C,	concentration ≥ 50 mg/k	
Thermal Insulation Application Sample Description	Concentration (mg/kg)	Estimate Amount of Material	<u>Units</u>
Example:			
Thermal Insulation Sample 1	20		Square Feet
